TABLE of CONTENTS

This book is available in other formats: Audiobook, e-book, paperback, hardcover.

You are reading the complimentary electronic copy of H.P. Lovecraft: The Complete Omnibus, Volume II, in the Adobe PDF format — Pulp-Lit Productions' version of Amazon's "Look Inside" feature, only including the entire book.

Whether you're here checking it out to see if you might want to own a copy, or doing a quick search, or even retrieving a clean digital copy of one of Lovecraft's stories for a project of your own — welcome!

But, of course, PDF is hardly the most convenient format in which to read a book. Here are a few other options that are available, followed by a link to take you directly to them:

- **Hardcover multimedia bundle edition** (includes audiobook and e-book);
- **Deluxe 7x10 pulp-magazine-size softcover**;
- **E-book** in EPUB and Kindle formats;
- **Audiobook** (35 hours).

To learn more about these other formats, please [click here to go to the H.P. Lovecraft Volume II Book Support Page](http://pulp-lit.com/240.html) at <http://pulp-lit.com/240.html>.

Thank you for reading our books!

FOREWORD.

[RETURN TO TABLE OF CONTENTS]

This is Volume II of our two-part omnibus collection of the fiction writings of H.P. Lovecraft. As you will be aware if you started with Volume I, it is the complete collection of Lovecraft's fiction output published under his own name between 1917 and 1935. Excluded from this collection are his poetry, nonfiction writings, juvenilia, stories written in collaboration with or ghostwritten for other authors, and his letters.

It's ironic that the writing for which Lovecraft is most remembered today represents by far the smallest of these categories. His letters alone ran to hundreds of thousands of pages. But despite their volume, they had nowhere near the

influence on 20th- and 21st-century literature that the spare canon collected in this two-volume set has had.

What follows here is a continuation of the brief biography of our author started in Volume I. Again, this fleeting sketch is by no means a substitute for a real, detailed biography of the author; rather, it's designed to help the reader better appreciate the stories by placing them into context and understanding their role in their author's life.

This is especially helpful in reading Lovecraft because throughout his career, each of his stories built on his previous work. Sometimes he does this in obvious ways, as with the references to "The Call of Cthulhu" in *The Dunwich*

Horror, *The Whisperer in Darkness* and *The Shadow Over Innsmouth*. In other cases the references are more subtle—for instance, the reference in “The Challenge from Beyond” to the “Great Race” of ancient cone-shaped beings from *The Shadow out of Time*, and the brief mention of Prof. Albert Wilmarth, protagonist of *The Whisperer in Darkness*, in *At the Mountains of Madness*. Lovecraft’s writings were created in the context of a growing fictional universe to which his works make additions, references and elucidations throughout his literary career; being familiar with that context, and with it that fictional universe, adds a whole new dimension to the enjoyment of his work. And, as noted in the foreword to Volume I, it’s that familiarity that this edition seeks to provide to the casual Lovecraft fan.

For readers who are interested in a more in-depth treatment of the life and work of this fascinating author, I recommend *I Am Providence: The Life and Times of H.P. Lovecraft*, a two-volume set published by Hippocampus Press in 2010, at 564 and 598 pages respectively; and the somewhat more controversial *H.P. Lovecraft: A Biography* by L. Sprague de Camp (480 pages), the first true biography of Lovecraft, published by Ballantine Books in 1976.

Howard Phillips Lovecraft was born into an old-line family with aristocratic aspirations, in the old New England

town of Providence, Rhode Island. His childhood was as idyllic as can be imagined, or at least it started out that way—surrounded by loving parents and grandparents, in a gorgeous Victorian mansion. But starting around the age of three, Lovecraft would watch his lifestyle follow a steady arc downward from that lofty height, like a boat circling the maw of Charybdis.

First, at age 3, he lost his father to insanity. Then his family’s fortune dwindled away, and with it all the doors that would have been open to a youth of Lovecraft’s talent and promise, as his beloved grandfather suffered business reversals; then, at age 14, he lost his grandfather as well.

At age 18 he lost his dream of becoming a professional astronomer—due, he claimed, to his discovery that algebra was beyond his powers—and suffered a nervous breakdown, essentially dropping out of high school.

He lost his mother twice—once to anxiety-related mental illness, and two years later to death.

And 1925 was the year in which, having dared to dream that he could interrupt this pattern, he lost his dream of making it as a writer in New York City, and with it the barely-tasted happiness of married life with Sonia Greene.

All of this is not, of course, to claim that Lovecraft knew no successes and joys during his life. But it’s important to notice that they

appeared against a backdrop of steady decline, a fading-away from a barely remembered golden time when everything had been perfect and lovely. And you can feel the wistful quality of harkening back toward a lost golden age in Lovecraft’s work, throughout his life—the loving wistfulness of a man looking to the past to try to recapture something he knows he will never have again.

Among the high points of Lovecraft’s life after childhood, the key moments were his discovery of and welcome into the amateur-press community when he was 23; his discovery of the writings of Lord Dunsany at the age of 29; his coming to New York to marry and (he thought) take a proper salaried literary position at age 34; and, most poignantly of all, his return to Providence, to the place of his birth.

Unlike the other high points of his life, Lovecraft’s return to Providence had a certain quality of exquisite despair, like a consumptive going home to die. He could not go back in time, of course, to retreat to his remembered and cherished home. So he was settling for going back in space, and surrounding himself with the old furnishings of the 1890s, and dressing himself in his father’s Edwardian-age garments, and styling himself as a Victorian gentleman—getting as close to that golden past as he could. And the delight he expressed when the opportunity to do so presented itself

has a real poignancy to it. One is happy for him, of course; but one also senses that this is it. He has given up.

At the same time Lovecraft was undergoing this profound transition his stories were undergoing a subtle but powerful shift as well—the shift that would transform Lovecraft from a gifted teller of tales of supernatural terror into the founder of a new sub-genre of horror, one springing from a literary philosophy that’s come to be known as “cosmicism.”

Cosmicism posits that nothing supernatural exists—no god or gods, no universal morality, nothing but cold matter and bleak space—and in that space, humans are as insignificant, unimportant and ignorant as ants on a sidewalk. Moreover, just as that ant on the sidewalk is barely able to perceive a tiny part of its world and can never possibly know more, so it is with humans, who can only see what’s slightly larger than themselves. And just as that ant may one day, when it least expects it, be annihilated by the stray footstep of a passing child, humanity may one day be similarly obliterated by something that neither notices its presence nor cares about it.

That inability to see more than just a horrifying hint of the cosmic enormities from beyond is, for Lovecraft, the heart of true horror, evocative of far more existential dread than an entire menagerie of night-gaunts, ghouls, gugs and ghouls.

Thus, at the same time Lovecraft was moving back to Providence, his fiction writing was undergoing a profound but subtle change—from conventional spooky stories into a kind of dark, opaque, sinister science fiction. Where once his writing was full of pseudo-mythic supernatural fantasy, he was now finding ways to ground those pseudo-myths in an objective and material (and therefore believable) reality—witches who function by manipulating the fourth dimension, races of creatures with access to sense organs we know nothing about, the genetic-engineering experiments of ancient aliens still running amok beneath the polar icecaps. It would be this approach, more than anything else, that would infuse his later stories with horror and plausibility simultaneously, creating the cocktail of thrilling, lingering dread that would remain a Lovecraft hallmark even in his weakest prose.

Both these changes in Lovecraft's life—the wistful return to Providence, and the deep philosophical transformation in his literary philosophy—came to a head in 1926, as he was leaving New York. And it is just after this double inflection point in Lovecraft's life, this pivotal moment of joy and relief and regret and fatalistic resignation, that Volume II picks up the thread of his literary output. Lovecraft's bitter-sweet joy palpably infuses his work after his return to Providence, softening the bleak quality of the New

York-era stories at the same time as his developing philosophy makes them more plausibly terrifying. The stories for which Lovecraft is best known and loved date back to this period in his life—the period of his artistic maturity.

FINN J.D. JOHN.

1927:

SETTLING INTO *a* GOLDEN AGE.

[RETURN TO TABLE OF CONTENTS]

Nineteen-twenty-seven was Lovecraft's first full year back in Providence, living in one side of what amounts to a duplex with his aunt occupying the other side. During the first few months of the year, he was still putting the finishing touches on his longest work to date, *The Dream-Quest of Unknown Kadath* (see Volume I); but before the year ended, he would have created a longer one, his only full-length novel: *The Case of Charles Dexter Ward*.

The Case of Charles Dexter Ward is one of Lovecraft's most beloved tales today, but after he had written it, Lovecraft's own judgement of it was quite harsh—a foreshadowing

of the crushing hypercriticality that would, in partnership with an increasing sensitivity to rejection, begin to really cripple his output after 1931.

This was also the year in which Lovecraft wrote one of his most iconic stories—one that, like *The Case of Charles Dexter Ward*, was deeply infused with the spirit of the New England countryside which he had now started to explore in earnest: "The Colour out of Space." Like "The Call of Cthulhu," this was actually a science-fiction story—part of Lovecraft's new(-ish) cosmicist approach to his storytelling.

Lovecraft's ghostwriting business prospered in 1927, although, of course, he charged too little for his

services and had great difficulty collecting even that. The year brought some non-monetary gratification, though, when “The Horror at Red Hook” was published in a British anthology of horror stories titled *You’ll Need a Night Light*—representing the first time Lovecraft’s work had appeared in a hardcover book—and when “The Colour out of Space” was picked for Edward J. O’Brien’s Best Short Stories volume for 1938.

In addition to “The Colour out of Space” and *The Case of Charles Dexter Ward*, Lovecraft also wrote “The Very Old Folk”—a story presented as a letter, based on the transcript of a dream.

The COLOUR out of SPACE.

[RETURN TO TABLE OF CONTENTS]

West of Arkham the hills rise wild, and there are valleys with deep woods that no axe has ever cut. There are dark narrow glens where the trees slope fantastically, and where thin brooklets trickle without ever having caught the glint of sunlight. On the gentler slopes there are farms, ancient and rocky, with squat, moss-coated cottages brooding eternally over old New England secrets in the lee of great ledges; but these are all vacant now, the wide chimneys crumbling and the shingled sides bulging perilously beneath low gambrel roofs.

The old folk have gone away, and foreigners do not like to live there. French-Canadians have tried

it, Italians have tried it, and the Poles have come and departed. It is not because of anything that can be seen or heard or handled, but because of something that is imagined. The place is not good for the imagination, and does not bring restful dreams at night. It must be this which keeps the foreigners away, for old Ammi Pierce has never told them of anything he recalls from the strange days. Ammi, whose head has been a little queer for years, is the only one who still remains, or who ever talks of the strange days; and he dares to do this because his house is so near the open fields and the travelled roads around Arkham.

There was once a road over the hills and through the valleys, that ran straight where the blasted heath

is now; but people ceased to use it and a new road was laid curving far toward the south. Traces of the old one can still be found amidst the weeds of a returning wilderness, and some of them will doubtless linger even when half the hollows are flooded for the new reservoir. Then the dark woods will be cut down and the blasted heath will slumber far below blue waters whose surface will mirror the sky and ripple in the sun. And the secrets of the strange days will be one with the deep's secrets; one with the hidden lore of old ocean, and all the mystery of primal earth.

When I went into the hills and vales to survey for the new reservoir they told me the place was evil. They told me this in Arkham, and because that is a very old town full of witch legends I thought the evil must be something which grandams had whispered to children through centuries. The name "blasted heath" seemed to me very odd and theatrical, and I wondered how it had come into the folklore of a Puritan people. Then I saw that dark westward tangle of glens and slopes for myself, and ceased to wonder at anything besides its own elder mystery. It was morning when I saw it, but shadow lurked always there. The trees grew too thickly, and their trunks were too big for any healthy New England wood. There was too much silence in the dim alleys between them, and the floor was too soft with the dank moss and matings

of infinite years of decay.

In the open spaces, mostly along the line of the old road, there were little hillside farms; sometimes with all the buildings standing, sometimes with only one or two, and sometimes with only a lone chimney or fast-filling cellar. Weeds and briers reigned, and furtive wild things rustled in the undergrowth. Upon everything was a haze of restlessness and oppression; a touch of the unreal and the grotesque, as if some vital element of perspective or chiaroscuro were awry. I did not wonder that the foreigners would not stay, for this was no region to sleep in. It was too much like a landscape of Salvator Rosa; too much like some forbidden woodcut in a tale of terror.

But even all this was not so bad as the blasted heath. I knew it the moment I came upon it at the bottom of a spacious valley; for no other name could fit such a thing, or any other thing fit such a name. It was as if the poet had coined the phrase from having seen this one particular region. It must, I thought as I viewed it, be the outcome of a fire; but why had nothing new ever grown over those five acres of grey desolation that sprawled open to the sky like a great spot eaten by acid in the woods and fields? It lay largely to the north of the ancient road line, but encroached a little on the other side. I felt an odd reluctance about approaching, and did so at last only because my business took me through and past it. There was no

vegetation of any kind on that broad expanse, but only a fine grey dust or ash which no wind seemed ever to blow about. The trees near it were sickly and stunted, and many dead trunks stood or lay rotting at the rim. As I walked hurriedly by I saw the tumbled bricks and stones of an old chimney and cellar on my right, and the yawning black maw of an abandoned well whose stagnant vapours played strange tricks with the hues of the sunlight. Even the long, dark woodland climb beyond seemed welcome in contrast, and I marvelled no more at the frightened whispers of Arkham people. There had been no house or ruin near; even in the old days the place must have been lonely and remote. And at twilight, dreading to repass that ominous spot, I walked circuitously back to the town by the curving road on the south. I vaguely wished some clouds would gather, for an odd timidity about the deep skyey voids above had crept into my soul.

In the evening I asked old people in Arkham about the blasted heath, and what was meant by that phrase "strange days" which so many evasively muttered. I could not, however, get any good answers except that all the mystery was much more recent than I had dreamed. It was not a matter of old legendry at all, but something within the lifetime of those who spoke. It had happened in the 'eighties, and a family had disappeared or was killed. Speakers would not be exact; and because they

all told me to pay no attention to old Ammi Pierce's crazy tales, I sought him out the next morning, having heard that he lived alone in the ancient tottering cottage where the trees first begin to get very thick. It was a fearsomely archaic place, and had begun to exude the faint miasmal odour which clings about houses that have stood too long. Only with persistent knocking could I rouse the aged man, and when he shuffled timidly to the door I could tell he was not glad to see me. He was not so feeble as I had expected; but his eyes drooped in a curious way, and his unkempt clothing and white beard made him seem very worn and dismal.

Not knowing just how he could best be launched on his tales, I feigned a matter of business; told him of my surveying, and asked vague questions about the district. He was far brighter and more educated than I had been led to think, and before I knew it had grasped quite as much of the subject as any man I had talked with in Arkham. He was not like other rustics I had known in the sections where reservoirs were to be. From him there were no protests at the miles of old wood and farmland to be blotted out, though perhaps there would have been had not his home lain outside the bounds of the future lake. Relief was all that he shewed; relief at the doom of the dark ancient valleys through which he had roamed all his life. They were better under

water now—better under water since the strange days. And with this opening his husky voice sank low, while his body leaned forward and his right forefinger began to point shakily and impressively.

It was then that I heard the story, and as the rambling voice scraped and whispered on I shivered again and again despite the summer day. Often I had to recall the speaker from ramblings, piece out scientific points which he knew only by a fading parrot memory of professors' talk, or bridge over gaps, where his sense of logic and continuity broke down. When he was done I did not wonder that his mind had snapped a trifle, or that the folk of Arkham would not speak much of the blasted heath. I hurried back before sunset to my hotel, unwilling to have the stars come out above me in the open; and the next day returned to Boston to give up my position. I could not go into that dim chaos of old forest and slope again, or face another time that grey blasted heath where the black well yawned deep beside the tumbled bricks and stones. The reservoir will soon be built now, and all those elder secrets will be safe forever under watery fathoms. But even then I do not believe I would like to visit that country by night—at least not when the sinister stars are out; and nothing could bribe me to drink the new city water of Arkham.

It all began, old Ammi said, with the meteorite. Before that time there had been no wild legends at all since the witch trials, and even then these western woods were not feared half so much as the small island in the Miskatonic where the devil held court beside a curious stone altar older than the Indians. These were not haunted woods, and their fantastic dusk was never terrible till the strange days. Then there had come that white noontide cloud, that string of explosions in the air, and that pillar of smoke from the valley far in the wood. And by night all Arkham had heard of the great rock that fell out of the sky and bedded itself in the ground beside the well at the Nahum Gardner place. That was the house which had stood where the blasted heath was to come—the trim white Nahum Gardner house amidst its fertile gardens and orchards.

Nahum had come to town to tell people about the stone, and had dropped in at Ammi Pierce's on the way. Ammi was forty then, and all the queer things were fixed very strongly in his mind. He and his wife had gone with the three professors from Miskatonic University who hastened out the next morning to see the weird visitor from unknown stellar space, and had wondered why Nahum had called it so large the day before. It had shrunk, Nahum said as he pointed out the big brownish mound above the ripped earth and

charred grass near the archaic well-sweep in his front yard; but the wise men answered that stones do not shrink. Its heat lingered persistently, and Nahum declared it had glowed faintly in the night. The professors tried it with a geologist's hammer and found it was oddly soft. It was, in truth, so soft as to be almost plastic; and they gouged rather than chipped a specimen to take back to the college for testing. They took it in an old pail borrowed from Nahum's kitchen, for even the small piece refused to grow cool. On the trip back they stopped at Ammi's to rest, and seemed thoughtful when Mrs. Pierce remarked that the fragment was growing smaller and burning the bottom of the pail. Truly, it was not large, but perhaps they had taken less than they thought.

The day after that—all this was in June of '82—the professors had trooped out again in a great excitement. As they passed Ammi's they told him what queer things the specimen had done, and how it had faded wholly away when they put it in a glass beaker. The beaker had gone, too, and the wise men talked of the strange stone's affinity for silicon. It had acted quite unbelievably in that well-ordered laboratory; doing nothing at all and shewing no occluded gases when heated on charcoal, being wholly negative in the borax bead, and soon proving itself absolutely non-volatile at any producible temperature, including that of the oxy-hydrogen blowpipe.

On an anvil it appeared highly malleable, and in the dark its luminosity was very marked. Stubbornly refusing to grow cool, it soon had the college in a state of real excitement; and when upon heating before the spectroscope it displayed shining bands unlike any known colours of the normal spectrum there was much breathless talk of new elements, bizarre optical properties, and other things which puzzled men of science are wont to say when faced by the unknown.

Hot as it was, they tested it in a crucible with all the proper reagents. Water did nothing. Hydrochloric acid was the same. Nitric acid and even aqua regia merely hissed and splattered against its torrid invulnerability. Ammi had difficulty in recalling all these things, but recognized some solvents as I mentioned them in the usual order of use. There were ammonia and caustic soda, alcohol and ether, nauseous carbon disulphide and a dozen others; but although the weight grew steadily less as time passed, and the fragment seemed to be slightly cooling, there was no change in the solvents to shew that they had attacked the substance at all. It was a metal, though, beyond a doubt. It was magnetic, for one thing; and after its immersion in the acid solvents there seemed to be faint traces of the Widmanstätten figures found on meteoric iron. When the cooling had grown very considerable, the testing was carried on in glass; and

it was in a glass beaker that they left all the chips made of the original fragment during the work. The next morning both chips and beaker were gone without trace, and only a charred spot marked the place on the wooden shelf where they had been.

All this the professors told Ammi as they paused at his door, and once more he went with them to see the stony messenger from the stars, though this time his wife did not accompany him. It had now most certainly shrunk, and even the sober professors could not doubt the truth of what they saw. All around the dwindling brown lump near the well was a vacant space, except where the earth had caved in; and whereas it had been a good seven feet across the day before, it was now scarcely five. It was still hot, and the sages studied its surface curiously as they detached another and larger piece with hammer and chisel. They gouged deeply this time, and as they pried away the smaller mass they saw that the core of the thing was not quite homogeneous.

They had uncovered what seemed to be the side of a large coloured globule imbedded in the substance. The colour, which resembled some of the bands in the meteor's strange spectrum, was almost impossible to describe; and it was only by analogy that they called it colour at all. Its texture was glossy, and upon tapping it appeared to promise both brittleness and

hollowness. One of the professors gave it a smart blow with a hammer, and it burst with a nervous little pop. Nothing was emitted, and all trace of the thing vanished with the puncturing. It left behind a hollow spherical space about three inches across, and all thought it probable that others would be discovered as the enclosing substance wasted away.

Conjecture was vain; so after a futile attempt to find additional globules by drilling, the seekers left again with their new specimen—which proved, however, as baffling in the laboratory as its predecessor had been. Aside from being almost plastic, having heat, magnetism, and slight luminosity, cooling slightly in powerful acids, possessing an unknown spectrum, wasting away in air, and attacking silicon compounds with mutual destruction as a result, it presented no identifying features whatsoever; and at the end of the tests the college scientists were forced to own that they could not place it. It was nothing of this earth, but a piece of the great outside; and as such dowered with outside properties and obedient to outside laws.

That night there was a thunderstorm, and when the professors went out to Nahum's the next day they met with a bitter disappointment. The stone, magnetic as it had been, must have had some peculiar electrical property; for it had "drawn the lightning," as Nahum said, with a singular persistence. Six times within an hour the farmer saw the

lightning strike the furrow in the front yard, and when the storm was over nothing remained but a ragged pit by the ancient well-sweep, half-choked with caved-in earth. Digging had borne no fruit, and the scientists verified the fact of the utter vanishment. The failure was total; so that nothing was left to do but go back to the laboratory and test again the disappearing fragment left carefully cased in lead. That fragment lasted a week, at the end of which nothing of value had been learned of it. When it had gone, no residue was left behind, and in time the professors felt scarcely sure they had indeed seen with waking eyes that cryptic vestige of the fathomless gulfs outside; that lone, weird message from other universes and other realms of matter, force, and entity.

As was natural, the Arkham papers made much of the incident with its collegiate sponsoring, and sent reporters to talk with Nahum Gardner and his family. At least one Boston daily also sent a scribe, and Nahum quickly became a kind of local celebrity. He was a lean, genial person of about fifty, living with his wife and three sons on the pleasant farmstead in the valley. He and Ammi exchanged visits frequently, as did their wives; and Ammi had nothing but praise for him after all these years. He seemed slightly proud of the notice his place had attracted, and talked often of the meteorite in the succeeding weeks.

That July and August were hot; and Nahum worked hard at his haying in the ten-acre pasture across Chapman's Brook; his rattling wain wearing deep ruts in the shadowy lanes between. The labour tired him more than it had in other years, and he felt that age was beginning to tell on him.

Then fell the time of fruit and harvest. The pears and apples slowly ripened, and Nahum vowed that his orchards were prospering as never before. The fruit was growing to phenomenal size and unwonted gloss, and in such abundance that extra barrels were ordered to handle the future crop. But with the ripening came sore disappointment; for of all that gorgeous array of specious lusciousness not one single jot was fit to eat. Into the fine flavour of the pears and apples had crept a stealthy bitterness and sickishness, so that even the smallest of bites induced a lasting disgust. It was the same with the melons and tomatoes, and Nahum sadly saw that his entire crop was lost. Quick to connect events, he declared that the meteorite had poisoned the soil, and thanked Heaven that most of the other crops were in the upland lot along the road.

Winter came early, and was very cold. Ammi saw Nahum less often than usual, and observed that he had begun to look worried. The rest of his family, too, seemed to have grown taciturn; and were far from steady in their church-going or their attendance at the various social events of

the countryside. For this reserve or melancholy no cause could be found, though all the household confessed now and then to poorer health and a feeling of vague disquiet. Nahum himself gave the most definite statement of anyone when he said he was disturbed about certain footprints in the snow. They were the usual winter prints of red squirrels, white rabbits, and foxes, but the brooding farmer professed to see something not quite right about their nature and arrangement. He was never specific, but appeared to think that they were not as characteristic of the anatomy and habits of squirrels and rabbits and foxes as they ought to be. Ammi listened without interest to this talk until one night when he drove past Nahum's house in his sleigh on the way back from Clark's Corners. There had been a moon, and a rabbit had run across the road, and the leaps of that rabbit were longer than either Ammi or his horse liked. The latter, indeed, had almost run away when brought up by a firm rein. Thereafter Ammi gave Nahum's tales more respect, and wondered why the Gardner dogs seemed so cowed and quivering every morning. They had, it developed, nearly lost the spirit to bark.

In February the McGregor boys from Meadow Hill were out shooting woodchucks, and not far from the Gardner place bagged a very peculiar specimen. The proportions of its body seemed

slightly altered in a queer way impossible to describe, while its face had taken on an expression which no one ever saw in a woodchuck before. The boys were genuinely frightened, and threw the thing away at once, so that only their grotesque tales of it ever reached the people of the countryside. But the shying of the horses near Nahum's house had now become an acknowledged thing, and all the basis for a cycle of whispered legend was fast taking form.

People vowed that the snow melted faster around Nahum's than it did anywhere else, and early in March there was an awed discussion in Potter's general store at Clark's Corners. Stephen Rice had driven past Gardner's in the morning, and had noticed the skunk-cabbages coming up through the mud by the woods across the road. Never were things of such size seen before, and they held strange colours that could not be put into any words. Their shapes were monstrous, and the horse had snorted at an odour which struck Stephen as wholly unprecedented. That afternoon several persons drove past to see the abnormal growth, and all agreed that plants of that kind ought never to sprout in a healthy world. The bad fruit of the fall before was freely mentioned, and it went from mouth to mouth that there was poison in Nahum's ground. Of course it was the meteorite; and remembering how strange the men from the

college had found that stone to be, several farmers spoke about the matter to them.

One day they paid Nahum a visit; but having no love of wild tales and folklore were very conservative in what they inferred. The plants were certainly odd, but all skunk-cabbages are more or less odd in shape and odour and hue. Perhaps some mineral element from the stone had entered the soil, but it would soon be washed away. And as for the footprints and frightened horses—of course this was mere country talk which such a phenomenon as the aërolite would be certain to start. There was really nothing for serious men to do in cases of wild gossip, for superstitious rustics will say and believe anything. And so all through the strange days the professors stayed away in contempt. Only one of them, when given two phials of dust for analysis in a police job over a year and a half later, recalled that the queer colour of that skunk-cabbage had been very like one of the anomalous bands of light shewn by the meteor fragment in the college spectroscope, and like the brittle globule found imbedded in the stone from the abyss. The samples in this analysis case gave the same odd bands at first, though later they lost the property.

The trees budded prematurely around Nahum's, and at night they swayed ominously in the wind. Nahum's second son Thaddeus, a lad of fifteen, swore that they swayed

also when there was no wind; but even the gossips would not credit this. Certainly, however, restlessness was in the air. The entire Gardner family developed the habit of stealthy listening, though not for any sound which they could consciously name. The listening was, indeed, rather a product of moments when consciousness seemed half to slip away. Unfortunately such moments increased week by week, till it became common speech that "something was wrong with all Nahum's folks." When the early saxifrage came out it had another strange colour; not quite like that of the skunk-cabbage, but plainly related and equally unknown to anyone who saw it. Nahum took some blossoms to Arkham and shewed them to the editor of the Gazette, but that dignitary did no more than write a humorous article about them, in which the dark fears of rustics were held up to polite ridicule. It was a mistake of Nahum's to tell a stolid city man about the way the great, overgrown mourning-cloak butterflies behaved in connexion with these saxifrages.

April brought a kind of madness to the country folk, and began that disuse of the road past Nahum's which led to its ultimate abandonment. It was the vegetation. All the orchard trees blossomed forth in strange colours, and through the stony soil of the yard and adjacent pasturage there sprang up a bizarre growth which only a botanist could

connect with the proper flora of the region. No sane wholesome colours were anywhere to be seen except in the green grass and leafage; but everywhere those hectic and prismatic variants of some diseased, underlying primary tone without a place among the known tints of earth. The "Dutchman's breeches" became a thing of sinister menace, and the bloodroots grew insolent in their chromatic perversion. Ammi and the Gardners thought that most of the colours had a sort of haunting familiarity, and decided that they reminded one of the brittle globule in the meteor. Nahum ploughed and sowed the ten-acre pasture and the upland lot, but did nothing with the land around the house. He knew it would be of no use, and hoped that the summer's strange growths would draw all the poison from the soil. He was prepared for almost anything now, and had grown used to the sense of something near him waiting to be heard. The shunning of his house by neighbors told on him, of course; but it told on his wife more. The boys were better off, being at school each day; but they could not help being frightened by the gossip. Thaddeus, an especially sensitive youth, suffered the most.

In May the insects came, and Nahum's place became a nightmare of buzzing and crawling. Most of the creatures seemed not quite usual in their aspects and motions, and their nocturnal habits contradicted all former experience. The Gardners

took to watching at night—watching in all directions at random for something... they could not tell what. It was then that they all owned that Thaddeus had been right about the trees. Mrs. Gardner was the next to see it from the window as she watched the swollen boughs of a maple against a moonlit sky. The boughs surely moved, and there was no wind. It must be the sap. Strangeness had come into everything growing now.

Yet it was none of Nahum's family at all who made the next discovery. Familiarity had dulled them, and what they could not see was glimpsed by a timid windmill salesman from Bolton who drove by one night in ignorance of the country legends. What he told in Arkham was given a short paragraph in the Gazette; and it was there that all the farmers, Nahum included, saw it first.

The night had been dark and the buggy-lamps faint, but around a farm in the valley which everyone knew from the account must be Nahum's, the darkness had been less thick. A dim though distinct luminosity seemed to inhere in all the vegetation, grass, leaves, and blossoms alike, while at one moment a detached piece of the phosphorescence appeared to stir furtively in the yard near the barn.

The grass had so far seemed untouched, and the cows were freely pastured in the lot near the house, but toward the end of May the milk

began to be bad. Then Nahum had the cows driven to the uplands, after which the trouble ceased. Not long after this the change in grass and leaves became apparent to the eye. All the verdure was going grey, and was developing a highly singular quality of brittleness. Ammi was now the only person who ever visited the place, and his visits were becoming fewer and fewer. When school closed the Gardners were virtually cut off from the world, and sometimes let Ammi do their errands in town. They were failing curiously both physically and mentally, and no one was surprised when the news of Mrs. Gardner's madness stole around.

It happened in June, about the anniversary of the meteor's fall, and the poor woman screamed about things in the air which she could not describe. In her raving there was not a single specific noun, but only verbs and pronouns. Things moved and changed and fluttered, and ears tingled to impulses which were not wholly sounds. Something was taken away—she was being drained of something—something was fastening itself on her that ought not to be—someone must make it keep off—nothing was ever still in the night—the walls and windows shifted. Nahum did not send her to the county asylum, but let her wander about the house as long as she was harmless to herself and others. Even when her expression changed he did nothing. But when the boys grew afraid of her, and Thaddeus nearly

fainted at the way she made faces at him, he decided to keep her locked in the attic. By July she had ceased to speak and crawled on all fours, and before that month was over Nahum got the mad notion that she was slightly luminous in the dark, as he now clearly saw was the case with the nearby vegetation.

It was a little before this that the horses had stampeded. Something had aroused them in the night, and their neighing and kicking in their stalls had been terrible. There seemed virtually nothing to do to calm them, and when Nahum opened the stable door they all bolted out like frightened woodland deer. It took a week to track all four, and when found they were seen to be quite useless and unmanageable. Something had snapped in their brains, and each one had to be shot for its own good. Nahum borrowed a horse from Ammi for his haying, but found it would not approach the barn. It shied, balked, and whinnied, and in the end he could do nothing but drive it into the yard while the men used their own strength to get the heavy wagon near enough the hayloft for convenient pitching. And all the while the vegetation was turning grey and brittle. Even the flowers whose hues had been so strange were greying now, and the fruit was coming out grey and dwarfed and tasteless. The asters and golden-rod bloomed grey and distorted, and the roses and zinneas and hollyhocks in the front yard were such

blasphemous-looking things that Nahum's oldest boy Zenas cut them down. The strangely puffed insects died about that time, even the bees that had left their hives and taken to the woods.

By September all the vegetation was fast crumbling to a greyish powder, and Nahum feared that the trees would die before the poison was out of the soil. His wife now had spells of terrific screaming, and he and the boys were in a constant state of nervous tension. They shunned people now, and when school opened the boys did not go. But it was Ammi, on one of his rare visits, who first realised that the well water was no longer good. It had an evil taste that was not exactly fetid nor exactly salty, and Ammi advised his friend to dig another well on higher ground to use till the soil was good again. Nahum, however, ignored the warning, for he had by that time become calloused to strange and unpleasant things. He and the boys continued to use the tainted supply, drinking it as listlessly and mechanically as they ate their meagre and ill-cooked meals and did their thankless and monotonous chores through the aimless days. There was something of stolid resignation about them all, as if they walked half in another world between lines of nameless guards to a certain and familiar doom.

Thaddeus went mad in September after a visit to the well. He had gone with a pail and had

come back empty-handed, shrieking and waving his arms, and sometimes lapsing into an inane titter or a whisper about "the moving colours down there." Two in one family was pretty bad, but Nahum was very brave about it. He let the boy run about for a week until he began stumbling and hurting himself, and then he shut him in an attic room across the hall from his mother's. The way they screamed at each other from behind their locked doors was very terrible, especially to little Merwin, who fancied they talked in some terrible language that was not of earth. Merwin was getting frightfully imaginative, and his restlessness was worse after the shutting away of the brother who had been his greatest playmate.

Almost at the same time the mortality among the livestock commenced. Poultry turned greyish and died very quickly, their meat being found dry and noisome upon cutting. Hogs grew inordinately fat, then suddenly began to undergo loathsome changes which no one could explain. Their meat was of course useless, and Nahum was at his wit's end. No rural veterinary would approach his place, and the city veterinary from Arkham was openly baffled. The swine began growing grey and brittle and falling to pieces before they died, and their eyes and muzzles developed singular alterations. It was very inexplicable, for they had never been fed from the tainted vegetation. Then something

struck the cows. Certain areas or sometimes the whole body would be uncannily shrivelled or compressed, and atrocious collapses or disintegrations were common. In the last stages—and death was always the result—there would be a greying and turning brittle like that which beset the hogs. There could be no question of poison, for all the cases occurred in a locked and undisturbed barn. No bites of prowling things could have brought the virus, for what live beast of earth can pass through solid obstacles? It must be only natural disease—yet what disease could wreak such results was beyond any mind's guessing.

When the harvest came there was not an animal surviving on the place, for the stock and poultry were dead and the dogs had run away. These dogs, three in number, had all vanished one night and were never heard of again. The five cats had left some time before, but their going was scarcely noticed since there now seemed to be no mice, and only Mrs. Gardner had made pets of the graceful felines.

On the nineteenth of October Nahum staggered into Ammi's house with hideous news. The death had come to poor Thaddeus in his attic room, and it had come in a way which could not be told. Nahum had dug a grave in the railed family plot behind the farm, and had put therein what he found. There could have been nothing from outside, for the small barred window and locked

door were intact; but it was much as it had been in the barn. Ammi and his wife consoled the stricken man as best they could, but shuddered as they did so. Stark terror seemed to cling round the Gardners and all they touched, and the very presence of one in the house was a breath from regions unnamed and unnamable. Ammi accompanied Nahum home with the greatest reluctance, and did what he might to calm the hysterical sobbing of little Merwin. Zenas needed no calming. He had come of late to do nothing but stare into space and obey what his father told him; and Ammi thought that his fate was very merciful. Now and then Merwin's screams were answered faintly from the attic, and in response to an inquiring look Nahum said that his wife was getting very feeble.

When night approached, Ammi managed to get away; for not even friendship could make him stay in that spot when the faint glow of the vegetation began and the trees may or may not have swayed without wind. It was really lucky for Ammi that he was not more imaginative. Even as things were, his mind was bent ever so slightly; but had he been able to connect and reflect upon all the portents around him he must inevitably have turned a total maniac. In the twilight he hastened home, the screams of the mad woman and the nervous child ringing horribly in his ears.

Three days later Nahum lurched into Ammi's kitchen in the early morning, and in the absence of his host stammered out a desperate tale once more, while Mrs. Pierce listened in a clutching fright. It was little Merwin this time. He was gone. He had gone out late at night with a lantern and pail for water, and had never come back. He'd been going to pieces for days, and hardly knew what he was about. Screamed at everything. There had been a frantic shriek from the yard then, but before the father could get to the door the boy was gone. There was no glow from the lantern he had taken, and of the child himself no trace. At the time Nahum thought the lantern and pail were gone too; but when dawn came, and the man had plodded back from his all-night search of the woods and fields, he had found some very curious things near the well. There was a crushed and apparently somewhat melted mass of iron which had certainly been the lantern; while a bent bail and twisted iron hoops beside it, both half-fused, seemed to hint at the remnants of the pail. That was all.

Nahum was past imagining, Mrs. Pierce was blank, and Ammi, when he had reached home and heard the tale, could give no guess. Merwin was gone, and there would be no use in telling the people around, who shunned all Gardners now. No use, either, in telling the

city people at Arkham who laughed at everything. Thad was gone, and now Merwin was gone. Something was creeping and creeping and waiting to be seen and felt and heard. Nahum would go soon, and he wanted Ammi to look after his wife and Zenas if they survived him. It must all be a judgment of some sort; though he could not fancy what for, since he had always walked uprightly in the Lord's ways so far as he knew.

For over two weeks Ammi saw nothing of Nahum; and then, worried about what might have happened, he overcame his fears and paid the Gardner place a visit. There was no smoke from the great chimney, and for a moment the visitor was apprehensive of the worst. The aspect of the whole farm was shocking—greyish withered grass and leaves on the ground, vines falling in brittle wreckage from archaic walls and gables, and great bare trees clawing up at the grey November sky with a studied malevolence which Ammi could not but feel had come from some subtle change in the tilt of the branches. But Nahum was alive, after all. He was weak, and lying on a couch in the low-ceiled kitchen, but perfectly conscious and able to give simple orders to Zenas. The room was deadly cold; and as Ammi visibly shivered, the host shouted huskily to Zenas for more wood. Wood, indeed, was sorely needed; since the cavernous

fireplace was unlit and empty, with a cloud of soot blowing about in the chill wind that came down the chimney. Presently Nahum asked him if the extra wood had made him any more comfortable, and then Ammi saw what had happened. The stoutest cord had broken at last, and the hapless farmer's mind was proof against more sorrow.

Questioning tactfully, Ammi could get no clear data at all about the missing Zenas. "In the well—he lives in the well—" was all that the clouded father would say. Then there flashed across the visitor's mind a sudden thought of the mad wife, and he changed his line of inquiry. "Nabby? Why, here she is!" was the surprised response of poor Nahum, and Ammi soon saw that he must search for himself. Leaving the harmless babbler on the couch, he took the keys from their nail beside the door and climbed the creaking stairs to the attic. It was very close and noisome up there, and no sound could be heard from any direction. Of the four doors in sight, only one was locked, and on this he tried various keys on the ring he had taken. The third key proved the right one, and after some fumbling Ammi threw open the low white door.

It was quite dark inside, for the window was small and half-obsured by the crude wooden bars; and Ammi could see nothing at all on the wide-planked floor. The stench was beyond enduring, and before

proceeding further he had to retreat to another room and return with his lungs filled with breathable air. When he did enter he saw something dark in the corner, and upon seeing it more clearly he screamed outright. While he screamed he thought a momentary cloud eclipsed the window, and a second later he felt himself brushed as if by some hateful current of vapour. Strange colours danced before his eyes; and had not a present horror numbed him he would have thought of the globule in the meteor that the geologist's hammer had shattered, and of the morbid vegetation that had sprouted in the spring. As it was he thought only of the blasphemous monstrosity which confronted him, and which all too clearly had shared the nameless fate of young Thaddeus and the livestock. But the terrible thing about this horror was that it very slowly and perceptibly moved as it continued to crumble.

Ammi would give me no added particulars to this scene, but the shape in the corner does not reappear in his tale as a moving object. There are things which cannot be mentioned, and what is done in common humanity is sometimes cruelly judged by the law. I gathered that no moving thing was left in that attic room, and that to leave anything capable of motion there would have been a deed so monstrous as to damn any accountable being to eternal torment. Anyone but a stolid farmer would have fainted or gone mad, but

Amami walked conscious through that low doorway and locked the accursed secret behind him. There would be Nahum to deal with now; he must be fed and tended, and removed to some place where he could be cared for.

Commencing his descent of the dark stairs, Amami heard a thud below him. He even thought a scream had been suddenly choked off, and recalled nervously the clammy vapour which had brushed by him in that frightful room above. What presence had his cry and entry started up? Halted by some vague fear, he heard still further sounds below. Indubitably there was a sort of heavy dragging, and a most detestably sticky noise as of some fiendish and unclean species of suction. With an associative sense goaded to feverish heights, he thought unaccountably of what he had seen upstairs. Good God! What eldritch dream-world was this into which he had blundered? He dared move neither backward nor forward, but stood there trembling at the black curve of the boxed-in staircase. Every trifle of the scene burned itself into his brain. The sounds, the sense of dread expectancy, the darkness, the steepness of the narrow steps—and merciful Heaven!—the faint but unmistakable luminosity of all the woodwork in sight; steps, sides, exposed laths, and beams alike!

Then there burst forth a frantic whinny from Amami's horse outside, followed at once by a clatter which

told of a frenzied runaway. In another moment horse and buggy had gone beyond earshot, leaving the frightened man on the dark stairs to guess what had sent them. But that was not all. There had been another sound out there. A sort of liquid splash—water—it must have been the well. He had left Hero untied near it, and a buggy wheel must have brushed the coping and knocked in a stone.

And still the pale phosphorescence glowed in that detestably ancient woodwork. God! how old the house was! Most of it built before 1670, and the gambrel roof not later than 1730.

A feeble scratching on the floor downstairs now sounded distinctly, and Amami's grip tightened on a heavy stick he had picked up in the attic for some purpose. Slowly nerving himself, he finished his descent and walked boldly toward the kitchen. But he did not complete the walk, because what he sought was no longer there. It had come to meet him, and it was still alive after a fashion. Whether it had crawled or whether it had been dragged by any external force, Amami could not say; but the death had been at it. Everything had happened in the last half-hour, but collapse, greying, and disintegration were already far advanced. There was a horrible brittleness, and dry fragments were scaling off. Amami could not touch it, but looked horrifiedly into the distorted parody that had been a face.

"What was it, Nahum—what was it?" he whispered, and the cleft, bulging lips were just able to crackle out a final answer.

"Nothin'... nothin'... the colour... it burns... cold an' wet, but it burns... it lived in the well... I seen it... a kind of smoke... jest like the flowers last spring... the well shone at night... Thad an' Mernie an' Zenas... everything alive... suckin' the life out of everything... in that stone... it must a' come in that stone p'zened the whole place... dun't know what it wants... that round thing them men from the college dug outen the stone... they smashed it... it was that same colour... jest the same, like the flowers an' plants... must a'ben more of 'em... seeds... seeds... they growed... I seen it the fust time this week... must a' got strong on Zenas... he was a big boy, full o' life... it beats down your mind an' then gits ye... burns ye up... in the well water... you was right about that... evil water... Zenas never come back from the well... can't git away... draws ye... ye know summ'at's comin' but tain't no use... I seen it time an' agin senct Zenas was took... whar's Nabby, Amami?... my head's no good... dun't know how long sence I fed her... it'll git her ef we ain't keerful... jest a colour... her face is gittin' to hev that colour sometimes towards night... an' it burns an' sucks... it come from some place whar things ain't as they is here... one o' them professors said so... he

was right... look out, Amami, it'll do sumthin' more... sucks the life out...."

But that was all. That which spoke could speak no more because it had completely caved in. Amami laid a red checked tablecloth over what was left and reeled out the back door into the fields. He climbed the slope to the ten-acre pasture and stumbled home by the north road and the woods. He could not pass that well from which his horse had run away. He had looked at it through the window, and had seen that no stone was missing from the rim. Then the lurching buggy had not dislodged anything after all—the splash had been something else—something which went into the well after it had done with poor Nahum.

When Amami reached his house the horse and buggy had arrived before him and thrown his wife into fits of anxiety. Reassuring her without explanations, he set out at once for Arkham and notified the authorities that the Gardner family was no more. He indulged in no details, but merely told of the deaths of Nahum and Nabby, that of Thaddeus being already known, and mentioned that the cause seemed to be the same strange ailment which had killed the livestock. He also stated that Merwin and Zenas had disappeared. There was considerable questioning at the police station, and in the end Amami

was compelled to take three officers to the Gardner farm, together with the coroner, the medical examiner, and the veterinary who had treated the diseased animals. He went much against his will, for the afternoon was advancing and he feared the fall of night over that accursed place, but it was some comfort to have so many people with him.

The six men drove out in a democrat-wagon, following Ammi's buggy, and arrived at the pest-ridden farmhouse about four o'clock. Used as the officers were to gruesome experiences, not one remained unmoved at what was found in the attic and under the red checked tablecloth on the floor below. The whole aspect of the farm with its grey desolation was terrible enough, but those two crumbling objects were beyond all bounds. No one could look long at them, and even the medical examiner admitted that there was very little to examine. Specimens could be analysed, of course, so he busied himself in obtaining them—and here it develops that a very puzzling aftermath occurred at the college laboratory where the two phials of dust were finally taken. Under the spectroscope both samples gave off an unknown spectrum, in which many of the baffling bands were precisely like those which the strange meteor had yielded in the previous year. The property of emitting this spectrum vanished in a month, the dust thereafter consisting mainly of alkaline

phosphates and carbonates.

Ammi would not have told the men about the well if he had thought they meant to do anything then and there. It was getting toward sunset, and he was anxious to be away. But he could not help glancing nervously at the stony curb by the great sweep, and when a detective questioned him he admitted that Nahum had feared something down there—so much so that he had never even thought of searching it for Merwin or Zenas. After that nothing would do but that they empty and explore the well immediately, so Ammi had to wait trembling while pail after pail of rank water was hauled up and splashed on the soaking ground outside. The men sniffed in disgust at the fluid, and toward the last held their noses against the foetor they were uncovering. It was not so long a job as they had feared it would be, since the water was phenomenally low.

There is no need to speak too exactly of what they found. Merwin and Zenas were both there, in part, though the vestiges were mainly skeletal. There were also a small deer and a large dog in about the same state, and a number of bones of smaller animals. The ooze and slime at the bottom seemed inexplicably porous and bubbling, and a man who descended on hand-holds with a long pole found that he could sink the wooden shaft to any depth in the mud of the floor without meeting any solid obstruction.

Twilight had now fallen, and

lanterns were brought from the house. Then, when it was seen that nothing further could be gained from the well, everyone went indoors and conferred in the ancient sitting-room while the intermittent light of a spectral half-moon played wanly on the grey desolation outside. The men were frankly nonplussed by the entire case, and could find no convincing common element to link the strange vegetable conditions, the unknown disease of livestock and humans, and the unaccountable deaths of Merwin and Zenas in the tainted well. They had heard the common country talk, it is true; but could not believe that anything contrary to natural law had occurred. No doubt the meteor had poisoned the soil, but the illness of persons and animals who had eaten nothing grown in that soil was another matter. Was it the well water? Very possibly. It might be a good idea to analyze it. But what peculiar madness could have made both boys jump into the well? Their deeds were so similar—and the fragments shewed that they had both suffered from the grey brittle death. Why was everything so grey and brittle?

It was the coroner, seated near a window overlooking the yard, who first noticed the glow about the well. Night had fully set in, and all the abhorrent grounds seemed faintly luminous with more than the fitful moonbeams; but this new glow was something definite and distinct, and appeared to shoot up from the black

pit like a softened ray from a searchlight, giving dull reflections in the little ground pools where the water had been emptied. It had a very queer colour, and as all the men clustered round the window Ammi gave a violent start. For this strange beam of ghastly miasma was to him of no unfamiliar hue. He had seen that colour before, and feared to think what it might mean. He had seen it in the nasty brittle globule in that aërolite two summers ago, had seen it in the crazy vegetation of the springtime, and had thought he had seen it for an instant that very morning against the small barred window of that terrible attic room where nameless things had happened. It had flashed there a second, and a clammy and hateful current of vapour had brushed past him—and then poor Nahum had been taken by something of that colour. He had said so at the last—said it was like the globule and the plants. After that had come the runaway in the yard and the splash in the well—and now that well was belching forth to the night a pale insidious beam of the same demoniac tint.

It does credit to the alertness of Ammi's mind that he puzzled even at that tense moment over a point which was essentially scientific. He could not but wonder at his gleaning of the same impression from a vapour glimpsed in the daytime, against a window opening on the morning sky, and from a nocturnal exhalation seen as a phosphorescent

mist against the black and blasted landscape. It wasn't right—it was against Nature—and he thought of those terrible last words of his stricken friend, "It come from some place whar things ain't as they is here... one o' them professors said so...."

All three horses outside, tied to a pair of shrivelled saplings by the road, were now neighing and pawing frantically. The wagon driver started for the door to do something, but Ammi laid a shaky hand on his shoulder. "Dun't go out thar," he whispered. "They's more to this nor what we know. Nahum said somethin' lived in the well that sucks your life out. He said it must be some'at growed from a round ball like one we all seen in the meteor stone that fell a year ago June. Sucks an' burns, he said, an' is jest a cloud of colour like that light out thar now, that ye can hardly see an' can't tell what it is. Nahum thought it feeds on everything livin' an' gits stronger all the time. He said he seen it this last week. It must be somethin' from away off in the sky like the men from the college last year says the meteor stone was. The way it's made an' the way it works ain't like no way o' God's world. It's some'at from beyond."

So the men paused indecisively as the light from the well grew stronger and the hitched horses pawed and whinnied in increasing frenzy. It was truly an awful moment; with terror in that ancient and accursed house itself, four monstrous

sets of fragments—two from the house and two from the well—in the woodshed behind, and that shaft of unknown and unholy iridescence from the slimy depths in front. Ammi had restrained the driver on impulse, forgetting how uninjured he himself was after the clammy brushing of that coloured vapour in the attic room, but perhaps it is just as well that he acted as he did. No one will ever know what was abroad that night; and though the blasphemy from beyond had not so far hurt any human of unweakened mind, there is no telling what it might not have done at that last moment, and with its seemingly increased strength and the special signs of purpose it was soon to display beneath the half-clouded moonlit sky.

All at once one of the detectives at the window gave a short, sharp gasp. The others looked at him, and then quickly followed his own gaze upward to the point at which its idle straying had been suddenly arrested. There was no need for words. What had been disputed in country gossip was disputable no longer, and it is because of the thing which every man of that party agreed in whispering later on, that the strange days are never talked about in Arkham.

It is necessary to premise that there was no wind at that hour of the evening. One did arise not long afterward, but there was absolutely none then. Even the dry tips of the lingering hedge-mustard, grey and

blighted, and the fringe on the roof of the standing democrat-wagon were unstirred. And yet amid that tense godless calm the high bare boughs of all the trees in the yard were moving. They were twitching morbidly and spasmodically, clawing in convulsive and epileptic madness at the moonlit clouds; scratching impotently in the noxious air as if jerked by some alien and bodiless line of linkage with subterranean horrors writhing and struggling below the black roots.

Not a man breathed for several seconds. Then a cloud of darker depth passed over the moon, and the silhouette of clutching branches faded out momentarily. At this there was a general cry; muffled with awe, but husky and almost identical from every throat. For the terror had not faded with the silhouette, and in a fearsome instant of deeper darkness the watchers saw wriggling at that treetop height a thousand tiny points of faint and unhallowed radiance, tipping each bough like the fire of St. Elmo or the flames that came down on the apostles' heads at Pentecost. It was a monstrous constellation of unnatural light, like a glutted swarm of corpse-fed fireflies dancing hellish sarabands over an accursed marsh; and its colour was that same nameless intrusion which Ammi had come to recognize and dread. All the while the shaft of phosphorescence from the well was getting brighter and brighter, bringing to the minds of the huddled

men a sense of doom and abnormality which far outraced any image their conscious minds could form. It was no longer shining out, it was pouring out; and as the shapeless stream of unplaceable colour left the well it seemed to flow directly into the sky.

The veterinary shivered, and walked to the front door to drop the heavy extra bar across it. Ammi shook no less, and had to tug and point for lack of a controllable voice when he wished to draw notice to the growing luminosity of the trees. The neighing and stamping of the horses had become utterly frightful, but not a soul of that group in the old house would have ventured forth for any earthly reward. With the moments the shining of the trees increased, while their restless branches seemed to strain more and more toward verticality. The wood of the well-sweep was shining now, and presently a policeman dumbly pointed to some wooden sheds and bee-hives near the stone wall on the west. They were commencing to shine, too, though the tethered vehicles of the visitors seemed so far unaffected. Then there was a wild commotion and clapping in the road, and as Ammi quenched the lamp for better seeing they realized that the span of frantic greys had broken their sapling and run off with the democrat-wagon.

The shock served to loosen several tongues, and embarrassed whispers were exchanged. "It spreads

on everything organic that's been around here," muttered the medical examiner. No one replied, but the man who had been in the well gave a hint that his long pole must have stirred up something intangible. "It was awful," he added. "There was no bottom at all. Just ooze and bubbles and the feeling of something lurking under there." Ammi's horse still pawed and screamed deafeningly in the road outside, and nearly drowned its owner's faint quaver as he mumbled his formless reflections. "It come from that stone... it growed down thar... it got everything livin'... it fed itself on 'em, mind and body... Thad an' Mernie, Zenas an' Nabby... Nahum was the last... they all drunk the water... it got strong on 'em... it come from beyond, whar things ain't like they be here... now it's goin' home...."

At this point, as the column of unknown colour flared suddenly stronger and began to weave itself into fantastic suggestions of shape which each spectator later described differently, there came from poor tethered Hero such a sound as no man before or since ever heard from a horse. Every person in that low-pitched sitting room stopped his ears, and Ammi turned away from the window in horror and nausea. Words could not convey it—when Ammi looked out again the hapless beast lay huddled inert on the moonlit ground between the splintered shafts of the buggy. That was the last of Hero till they buried

him next day. But the present was no time to mourn, for almost at this instant a detective silently called attention to something terrible in the very room with them. In the absence of the lamplight it was clear that a faint phosphorescence had begun to pervade the entire apartment. It glowed on the broad-planked floor and the fragment of rag carpet, and shimmered over the sashes of the small-paned windows. It ran up and down the exposed corner-posts, coruscated about the shelf and mantel, and infected the very doors and furniture. Each minute saw it strengthen, and at last it was very plain that healthy living things must leave that house.

Ammi shewed them the back door and the path up through the fields to the ten-acre pasture. They walked and stumbled as in a dream, and did not dare look back till they were far away on the high ground. They were glad of the path, for they could not have gone the front way, by that well. It was bad enough passing the glowing barn and sheds, and those shining orchard trees with their gnarled, fiendish contours; but thank heaven the branches did their worst twisting high up. The moon went under some very black clouds as they crossed the rustic bridge over Chapman's Brook, and it was blind groping from there to the open meadows.

When they looked back toward the valley and the distant Gardner place at the bottom they saw a

fearsome sight. All the farm was shining with the hideous unknown blend of colour; trees, buildings, and even such grass and herbage as had not been wholly changed to lethal grey brittleness. The boughs were all straining skyward, tipped with tongues of foul flame, and lambent tricklings of the same monstrous fire were creeping about the ridgepoles of the house, barn and sheds. It was a scene from a vision of Fuseli, and over all the rest reigned that riot of luminous amorphousness, that alien and undimensioned rainbow of cryptic poison from the well—seething, feeling, lapping, reaching, scintillating, straining, and malignly bubbling in its cosmic and unrecognizable chromaticism.

Then without warning the hideous thing shot vertically up toward the sky like a rocket or meteor, leaving behind no trail and disappearing through a round and curiously regular hole in the clouds before any man could gasp or cry out.

No watcher can ever forget that sight, and Ammi stared blankly at the stars of Cygnus, Deneb twinkling above the others, where the unknown colour had melted into the Milky Way. But his gaze was the next moment called swiftly to earth by the crackling in the valley. It was just that. Only a wooden ripping and crackling, and not an explosion, as so many others of the party vowed. Yet the outcome was the same, for in one feverish kaleidoscopic instant

there burst up from that doomed and accursed farm a gleamingly eruptive cataclysm of unnatural sparks and substance; blurring the glance of the few who saw it, and sending forth to the zenith a bombarding cloudburst of such coloured and fantastic fragments as our universe must needs disown. Through quickly re-closing vapours they followed the great morbidity that had vanished, and in another second they had vanished too. Behind and below was only a darkness to which the men dared not return, and all about was a mounting wind which seemed to sweep down in black, froze gusts from interstellar space. It shrieked and howled, and lashed the fields and distorted woods in a mad cosmic frenzy, till soon the trembling party realized it would be no use waiting for the moon to shew what was left down there at Nahum's.

Too awed even to hint theories, the seven shaking men trudged back toward Arkham by the north road. Ammi was worse than his fellows, and begged them to see him inside his own kitchen, instead of keeping straight on to town. He did not wish to cross the blighted, wind-whipped woods alone to his home on the main road. For he had had an added shock that the others were spared, and was crushed forever with a brooding fear he dared not even mention for many years to come. As the rest of the watchers on that tempestuous hill had stolidly set their faces toward the road, Ammi had looked back an

instant at the shadowed valley of desolation so lately sheltering his ill-starred friend. And from that stricken, far-away spot he had seen something feebly rise, only to sink down again upon the place from which the great shapeless horror had shot into the sky. It was just a colour—but not any colour of our earth or heavens. And because Ammi recognized that colour, and knew that this last faint remnant must still lurk down there in the well, he has never been quite right since.

Ammi would never go near the place again. It is forty-four years now since the horror happened, but he has never been there, and will be glad when the new reservoir blots it out. I shall be glad, too, for I do not like the way the sunlight changed colour around the mouth of that abandoned well I passed. I hope the water will always be very deep—but even so, I shall never drink it. I do not think I shall visit the Arkham country hereafter.

Three of the men who had been with Ammi returned the next morning to see the ruins by daylight, but there were not any real ruins. Only the bricks of the chimney, the stones of the cellar, some mineral and metallic litter here and there, and the rim of that nefarious well. Save for Ammi's dead horse, which they towed away and buried, and the buggy which they shortly returned to him, everything that had ever been living had gone. Five eldritch acres of dusty grey desert remained, nor

has anything ever grown there since. To this day it sprawls open to the sky like a great spot eaten by acid in the woods and fields, and the few who have ever dared glimpse it in spite of the rural tales have named it "the blasted heath."

The rural tales are queer. They might be even queerer if city men and college chemists could be interested enough to analyze the water from that disused well, or the grey dust that no wind seems ever to disperse. Botanists, too, ought to study the stunted flora on the borders of that spot, for they might shed light on the country notion that the blight is spreading—little by little, perhaps an inch a year. People say the colour of the neighboring herbage is not quite right in the spring, and that wild things leave queer prints in the light winter snow. Snow never seems quite so heavy on the blasted heath as it is elsewhere. Horses—the few that are left in this motor age—grow skittish in the silent valley; and hunters cannot depend on their dogs too near the splotch of greyish dust.

They say the mental influences are very bad, too; numbers went queer in the years after Nahum's taking, and always they lacked the power to get away. Then the stronger-minded folk all left the region, and only the foreigners tried to live in the crumbling old homesteads. They could not stay, though; and one sometimes wonders what insight beyond ours their wild, weird stories

of whispered magic have given them. Their dreams at night, they protest, are very horrible in that grotesque country; and surely the very look of the dark realm is enough to stir a morbid fancy. No traveler has ever escaped a sense of strangeness in those deep ravines, and artists shiver as they paint thick woods whose mystery is as much of the spirit as of the eye. I myself am curious about the sensation I derived from my one lone walk before Ammi told me his tale. When twilight came I had vaguely wished some clouds would gather, for an odd timidity about the deep skyey voids above had crept into my soul.

Do not ask me for my opinion. I do not know—that is all. There was no one but Ammi to question; for Arkham people will not talk about the strange days, and all three professors who saw the aërolite and its coloured globule are dead. There were other globules—depend upon that. One must have fed itself and escaped, and probably there was another which was too late. No doubt it is still down the well—I know there was something wrong with the sunlight I saw above that miasmal brink. The rustics say the blight creeps an inch a year, so perhaps there is a kind of growth or nourishment even now. But whatever demon hatchling is there, it must be tethered to something or else it would quickly spread. Is it fastened to the roots of those trees that claw the air? One of the current

Arkham tales is about fat oaks that shine and move as they ought not to do at night.

What it is, only God knows. In terms of matter I suppose the thing Ammi described would be called a gas, but this gas obeyed laws that are not of our cosmos. This was no fruit of such worlds and suns as shine on the telescopes and photographic plates of our observatories. This was no breath from the skies whose motions and dimensions our astronomers measure or deem too vast to measure. It was just a colour out of space—a frightful messenger from unformed realms of infinity beyond all Nature as we know it; from realms whose mere existence stuns the brain and numbs us with the black extra-cosmic gulfs it throws open before our frenzied eyes.

I doubt very much if Ammi consciously lied to me, and I do not think his tale was all a freak of madness as the townfolk had forewarned. Something terrible came to the hills and valleys on that meteor, and something terrible—though I know not in what proportion—still remains. I shall be glad to see the water come.

Meanwhile I hope nothing will happen to Ammi. He saw so much of the thing—and its influence was so insidious. Why has he never been able to move away? How clearly he recalled those dying words of Nahum's—"Can't git away... draws ye... ye know summ'at's comin' but

tain't no use...." Ammi is such a good old man—when the reservoir gang gets to work I must write the chief engineer to keep a sharp watch on him. I would hate to think of him as the grey, twisted, brittle monstrosity which persists more and more in troubling my sleep.

The CASE of CHARLES DEXTER WARD.

[RETURN TO TABLE OF CONTENTS]

The essential Saltes of Animals may be so prepared and preserved, that an ingenious Man may have the whole Ark of Noah in his own Studie, and raise the fine Shape of an Animal out of its Ashes at his Pleasure; and by the lyke Method from the essential Saltes of humane Dust, a Philosopher may, without any criminal Necromancy, call up the Shape of any dead Ancestour from the Dust whereinto his Bodie has been incinerated.

—Borellus

Part One:

A RESULT AND A PROLOGUE.

I.

From a private hospital for the insane near Providence, Rhode Island, there recently disappeared an exceedingly singular person. He bore the name of Charles Dexter Ward, and was placed under restraint most reluctantly by the grieving father who had watched his aberration grow

from a mere eccentricity to a dark mania involving both a possibility of murderous tendencies and a profound and peculiar change in the apparent contents of his mind. Doctors confess themselves quite baffled by his case, since it presented oddities of a general physiological as well as psychological character.

In the first place, the patient seemed oddly older than his twenty-six years would warrant. Mental disturbance, it is true, will age one rapidly; but the face of this young man had taken on a subtle cast which

only the very aged normally acquire. In the second place, his organic processes shewed a certain queerness of proportion which nothing in medical experience can parallel. Respiration and heart action had a baffling lack of symmetry; the voice was lost, so that no sounds above a whisper were possible; digestion was incredibly prolonged and minimised, and neural reactions to standard stimuli bore no relation at all to anything heretofore recorded, either normal or pathological. The skin had a morbid chill and dryness, and the cellular structure of the tissue seemed exaggeratedly coarse and loosely knit. Even a large olive birthmark on the right hip had disappeared, whilst there had formed on the chest a very peculiar mole or blackish spot of which no trace existed before. In general, all physicians agree that in Ward the processes of metabolism had become retarded to a degree beyond precedent.

Psychologically, too, Charles Ward was unique. His madness held no affinity to any sort recorded in even the latest and most exhaustive of treatises, and was conjoined to a mental force which would have made him a genius or a leader had it not been twisted into strange and grotesque forms. Dr. Willett, who was Ward's family physician, affirms that the patient's gross mental capacity, as gauged by his response to matters outside the sphere of his insanity, had actually increased since the seizure. Ward, it is true, was

always a scholar and an antiquarian; but even his most brilliant early work did not shew the prodigious grasp and insight displayed during his last examinations by the alienists. It was, indeed, a difficult matter to obtain a legal commitment to the hospital, so powerful and lucid did the youth's mind seem; and only on the evidence of others, and on the strength of many abnormal gaps in his stock of information as distinguished from his intelligence, was he finally placed in confinement. To the very moment of his vanishment he was an omnivorous reader and as great a conversationalist as his poor voice permitted; and shrewd observers, failing to foresee his escape, freely predicted that he would not be long in gaining his discharge from custody.

Only Dr. Willett, who brought Charles Ward into the world and had watched his growth of body and mind ever since, seemed frightened at the thought of his future freedom. He had had a terrible experience and had made a terrible discovery which he dared not reveal to his sceptical colleagues. Willett, indeed, presents a minor mystery all his own in his connexion with the case. He was the last to see the patient before his flight, and emerged from that final conversation in a state of mixed horror and relief which several recalled when Ward's escape became known three hours later. That escape itself is one of the unsolved wonders of Dr. Waite's hospital. A window

open above a sheer drop of sixty feet could hardly explain it, yet after that talk with Willett the youth was undeniably gone. Willett himself has no public explanations to offer, though he seems strangely easier in mind than before the escape. Many, indeed, feel that he would like to say more if he thought any considerable number would believe him. He had found Ward in his room, but shortly after his departure the attendants knocked in vain. When they opened the door the patient was not there, and all they found was the open window with a chill April breeze blowing in a cloud of fine bluish-grey dust that almost choked them. True, the dogs howled some time before; but that was while Willett was still present, and they had caught nothing and shewn no disturbance later on. Ward's father was told at once over the telephone, but he seemed more saddened than surprised. By the time Dr. Waite called in person, Dr. Willett had been talking with him, and both disavowed any knowledge or complicity in the escape. Only from certain closely confidential friends of Willett and the senior Ward have any clues been gained, and even these are too wildly fantastic for general credence. The one fact which remains is that up to the present time no trace of the missing madman has been unearthed.

Charles Ward was an antiquarian from infancy, no doubt gaining his taste from the venerable

town around him, and from the relics of the past which filled every corner of his parents' old mansion in Prospect Street on the crest of the hill. With the years his devotion to ancient things increased; so that history, genealogy, and the study of colonial architecture, furniture, and craftsmanship at length crowded everything else from his sphere of interests. These tastes are important to remember in considering his madness; for although they do not form its absolute nucleus, they play a prominent part in its superficial form. The gaps of information which the alienists noticed were all related to modern matters, and were invariably offset by a correspondingly excessive though outwardly concealed knowledge of bygone matters as brought out by adroit questioning; so that one would have fancied the patient literally transferred to a former age through some obscure sort of auto-hypnosis. The odd thing was that Ward seemed no longer interested in the antiquities he knew so well. He had, it appears, lost his regard for them through sheer familiarity; and all his final efforts were obviously bent toward mastering those common facts of the modern world which had been so totally and unmistakably expunged from his brain. That this wholesale deletion had occurred, he did his best to hide; but it was clear to all who watched him that his whole programme of reading and conversation was determined by a frantic

wish to imbibe such knowledge of his own life and of the ordinary practical and cultural background of the twentieth century as ought to have been his by virtue of his birth in 1902 and his education in the schools of our own time. Alienists are now wondering how, in view of his vitally impaired range of data, the escaped patient manages to cope with the complicated world of today; the dominant opinion being that he is "lying low" in some humble and unexacting position till his stock of modern information can be brought up to the normal.

The beginning of Ward's madness is a matter of dispute among alienists. Dr. Lyman, the eminent Boston authority, places it in 1919 or 1920, during the boy's last year at the Moses Brown School, when he suddenly turned from the study of the past to the study of the occult, and refused to qualify for college on the ground that he had individual researches of much greater importance to make. This is certainly borne out by Ward's altered habits at the time, especially by his continual search through town records and among old burying-grounds for a certain grave dug in 1771; the grave of an ancestor named Joseph Curwen, some of whose papers he professed to have found behind the panelling of a very old house in Olney Court, on Stampers' Hill, which Curwen was

known to have built and occupied. It is, broadly speaking, undeniable that the winter of 1919-20 saw a great change in Ward; whereby he abruptly stopped his general antiquarian pursuits and embarked on a desperate delving into occult subjects both at home and abroad, varied only by this strangely persistent search for his forefather's grave.

From this opinion, however, Dr. Willett substantially dissents; basing his verdict on his close and continuous knowledge of the patient, and on certain frightful investigations and discoveries which he made toward the last. Those investigations and discoveries have left their mark upon him; so that his voice trembles when he tells them, and his hand trembles when he tries to write of them. Willett admits that the change of 1919-20 would ordinarily appear to mark the beginning of a progressive decadence which culminated in the horrible and uncanny alienation of 1928; but believes from personal observation that a finer distinction must be made. Granting freely that the boy was always ill-balanced temperamentally, and prone to be unduly susceptible and enthusiastic in his responses to phenomena around him, he refuses to concede that the early alteration marked the actual passage from sanity to madness; crediting instead Ward's own statement that he had discovered or rediscovered something whose effect on human thought was

likely to be marvellous and profound. The true madness, he is certain, came with a later change; after the Curwen portrait and the ancient papers had been unearthed; after a trip to strange foreign places had been made, and some terrible invocations chanted under strange and secret circumstances; after certain answers to these invocations had been plainly indicated, and a frantic letter penned under agonising and inexplicable conditions; after the wave of vampirism and the ominous Pawtuxet gossip; and after the patient's memory commenced to exclude contemporary images whilst his voice failed and his physical aspect underwent the subtle modification so many subsequently noticed.

It was only about this time, Willett points out with much acuteness, that the nightmare qualities became indubitably linked with Ward; and the doctor feels shudderingly sure that enough solid evidence exists to sustain the youth's claim regarding his crucial discovery. In the first place, two workmen of high intelligence saw Joseph Curwen's ancient papers found. Secondly, the boy once shewed Dr. Willett those papers and a page of the Curwen diary, and each of the documents had every appearance of genuineness. The hole where Ward claimed to have found them was long a visible reality, and Willett had a very convincing final glimpse of them in surroundings which can scarcely be

believed and can never perhaps be proved. Then there were the mysteries and coincidences of the Orne and Hutchinson letters, and the problem of the Curwen penmanship and of what the detectives brought to light about Dr. Allen; these things, and the terrible message in mediaeval minuscules found in Willett's pocket when he gained consciousness after his shocking experience.

And most conclusive of all, there are the two hideous results which the doctor obtained from a certain pair of formulae during his final investigations; results which virtually proved the authenticity of the papers and of their monstrous implications at the same time that those papers were borne forever from human knowledge.

II.

One must look back at Charles Ward's earlier life as at something belonging as much to the past as the antiquities he loved so keenly. In the autumn of 1918, and with a considerable show of zest in the military training of the period, he had begun his junior year at the Moses Brown School, which lies very near his home. The old main building, erected in 1819, had always charmed his youthful antiquarian sense; and the spacious park in which the academy is set appealed to his sharp eye for landscape. His

social activities were few; and his hours were spent mainly at home, in rambling walks, in his classes and drills, and in pursuit of antiquarian and genealogical data at the City Hall, the State House, the Public Library, the Athenaeum, the Historical Society, the John Carter Brown and John Hay Libraries of Brown University, and the newly opened Shepley Library in Benefit Street. One may picture him yet as he was in those days; tall, slim, and blond, with studious eyes and a slight stoop, dressed somewhat carelessly, and giving a dominant impression of harmless awkwardness rather than attractiveness.

His walks were always adventures in antiquity, during which he managed to recapture from the myriad relics of a glamorous old city a vivid and connected picture of the centuries before. His home was a great Georgian mansion atop the well-nigh precipitous hill that rises just east of the river; and from the rear windows of its rambling wings he could look dizzily out over all the clustered spires, domes, roofs, and skyscraper summits of the lower town to the purple hills of the countryside beyond. Here he was born, and from the lovely classic porch of the double-bayed brick facade his nurse had first wheeled him in his carriage; past the little white farmhouse of two hundred years before that the town had long ago overtaken, and on toward the stately colleges along the shady, sumptuous

street, whose old square brick mansions and smaller wooden houses with narrow, heavy-columned Doric porches dreamed solid and exclusive amidst their generous yards and gardens.

He had been wheeled, too, along sleepy Congdon Street, one tier lower down on the steep hill, and with all its eastern homes on high terraces. The small wooden houses averaged a greater age here, for it was up this hill that the growing town had climbed; and in these rides he had imbibed something of the colour of a quaint colonial village. The nurse used to stop and sit on the benches of Prospect Terrace to chat with policemen; and one of the child's first memories was of the great westward sea of hazy roofs and domes and steeples and far hills which he saw one winter afternoon from that great railed embankment, all violet and mystic against a fevered, apocalyptic sunset of reds and golds and purples and curious greens. The vast marble dome of the State House stood out in massive silhouette, its crowning statue haloed fantastically by a break in one of the tinted stratus clouds that barred the flaming sky.

When he was larger his famous walks began; first with his impatiently dragged nurse, and then alone in dreamy meditation. Farther and farther down that almost perpendicular hill he would venture, each time reaching older and quainter levels of the ancient city. He would hesitate gingerly down vertical

Jenckes Street with its bank walls and colonial gables to the shady Benefit Street corner, where before him was a wooden antique with an Ionic-pilastered pair of doorways, and beside him a prehistoric gambrel-roofer with a bit of primal farmyard remaining, and the great Judge Durfee house with its fallen vestiges of Georgian grandeur. It was getting to be a slum here; but the titan elms cast a restoring shadow over the place, and the boy used to stroll south past the long lines of the pre-Revolutionary homes with their great central chimneys and classic portals. On the eastern side they were set high over basements with railed double flights of stone steps, and the young Charles could picture them as they were when the street was new, and red heels and periwigs set off the painted pediments whose signs of wear were now becoming so visible.

Westward the hill dropped almost as steeply as above, down to the old "Town Street" that the founders had laid out at the river's edge in 1636. Here ran innumerable little lanes with leaning, huddled houses of immense antiquity; and fascinated though he was, it was long before he dared to thread their archaic verticality for fear they would turn out a dream or a gateway to unknown terrors. He found it much less formidable to continue along Benefit Street past the iron fence of St. John's hidden churchyard and the rear of the 1761 Colony House and

the mouldering bulk of the Golden Ball Inn where Washington stopped. At Meeting Street—the successive Gaol Lane and King Street of other periods—he would look upward to the east and see the arched flight of steps to which the highway had to resort in climbing the slope, and downward to the west, glimpsing the old brick colonial schoolhouse that smiles across the road at the ancient Sign of Head where the Providence Gazette and Country-Journal was printed before the Revolution. Then came the exquisite First Baptist Church of 1775, luxurious with its matchless Gibbs steeple, and the Georgian roofs and cupolas hovering by. Here and to the southward the neighbourhood became better, flowering at last into a marvellous group of early mansions; but still the little ancient lanes led off down the precipice to the west, spectral in their many-gabled archaism and dipping to a riot of iridescent decay where the wicked old waterfront recalls its proud East India days amidst polyglot vice and squalor, rotting wharves, and bleary-eyed ship-chandleries, with such surviving alley names as Packet, Bullion, Gold, Silver, Coin, Doubloon, Sovereign, Guilder, Dollar, Dime, and Cent.

Sometimes, as he grew taller and more adventurous, young Ward would venture down into this maelstrom of tottering houses, broken transoms, tumbling steps, twisted balustrades, swarthy faces, and

nameless odours; winding from South Main to South Water, searching out the docks where the bay and sound steamers still touched, and returning northward at this lower level past the steep-roofed 1816 warehouses and the broad square at the Great Bridge, where the 1773 Market House still stands firm on its ancient arches. In that square he would pause to drink in the bewildering beauty of the old town as it rises on its eastward bluff, decked with its two Georgian spires and crowned by the vast new Christian Science dome as London is crowned by St. Paul's. He liked mostly to reach this point in the late afternoon, when the slanting sunlight touches the Market House and the ancient hill roofs and belfries with gold, and throws magic around the dreaming wharves where Providence Indiamen used to ride at anchor. After a long look he would grow almost dizzy with a poet's love for the sight, and then he would scale the slope homeward in the dusk past the old white church and up the narrow precipitous ways where yellow gleams would begin to peep out in small-paned windows and through fanlights set high over double flights of steps with curious wrought-iron railings.

At other times, and in later years, he would seek for vivid contrasts; spending half a walk in the crumbling colonial regions northwest of his home, where the hill drops to the lower eminence of Stampers' Hill with its ghetto and negro quarter

clustering round the place where the Boston stage coach used to start before the Revolution, and the other half in the gracious southerly realm about George, Benevolent, Power, and Williams Streets, where the old slope holds unchanged the fine estates and bits of walled garden and steep green lane in which so many fragrant memories linger. These rambles, together with the diligent studies which accompanied them, certainly account for a large amount of the antiquarian lore which at last crowded the modern world from Charles Ward's mind; and illustrate the mental soil upon which fell, in that fateful winter of 1919-20, the seeds that came to such strange and terrible fruition.

Dr. Willett is certain that, up to this ill-omened winter of first change, Charles Ward's antiquarianism was free from every trace of the morbid. Graveyards held for him no particular attraction beyond their quaintness and historic value, and of anything like violence or savage instinct he was utterly devoid. Then, by insidious degrees, there appeared to develop a curious sequel to one of his genealogical triumphs of the year before; when he had discovered among his maternal ancestors a certain very long-lived man named Joseph Curwen, who had come from Salem in March of 1692, and about whom a whispered series of highly

peculiar and disquieting stories clustered.

Ward's great-great-grandfather Welcome Potter had in 1785 married a certain "Ann Tillinghast, daughter of Mrs. Eliza, daughter to Capt. James Tillinghast," of whose paternity the family had preserved no trace. Late in 1918, whilst examining a volume of original town records in manuscript, the young genealogist encountered an entry describing a legal change of name, by which in 1772 a Mrs. Eliza Curwen, widow of Joseph Curwen, resumed, along with her seven-year-old daughter Ann, her maiden name of Tillinghast; on the ground "that her Husband's name was become a public Reproach by Reason of what was knowne after his Decease; the which confirming an antient common Rumour, tho' not to be credited by a loyall Wife till so proven as to be wholly past Doubting." This entry came to light upon the accidental separation of two leaves which had been carefully pasted together and treated as one by a laboured revision of the page numbers.

It was at once clear to Charles Ward that he had indeed discovered a hitherto unknown great-great-great-grandfather. The discovery doubly excited him because he had already heard vague reports and seen scattered allusions relating to this person; about whom there remained so few publicly available records, aside from those becoming public only in modern times, that it almost

seemed as if a conspiracy had existed to blot him from memory. What did appear, moreover, was of such a singular and provocative nature that one could not fail to imagine curiously what it was that the colonial recorders were so anxious to conceal and forget; or to suspect that the deletion had reasons all too valid.

Before this, Ward had been content to let his romancing about old Joseph Curwen remain in the idle stage; but having discovered his own relationship to this apparently "hushed-up" character, he proceeded to hunt out as systematically as possible whatever he might find concerning him. In this excited quest he eventually succeeded beyond his highest expectations; for old letters, diaries, and sheaves of unpublished memoirs in cobwebbed Providence garrets and elsewhere yielded many illuminating passages which their writers had not thought it worth their while to destroy. One important sidelight came from a point as remote as New York, where some Rhode Island colonial correspondence was stored in the Museum at Fraunces' Tavern. The really crucial thing, though, and what in Dr. Willett's opinion formed the definite source of Ward's undoing, was the matter found in August 1919 behind the panelling of the crumbling house in Olney Court. It was that, beyond a doubt, which opened up those black vistas whose end was deeper than the pit.

Part Two:

AN ANTECEDENT AND A HORROR.

I.

Joseph Curwen, as revealed by the rambling legends embodied in what Ward heard and unearthed, was a very astonishing, enigmatic, and obscurely horrible individual. He had fled from Salem to Providence—that universal haven of the odd, the free, and the dissenting—at the beginning of the great witchcraft panic; being in fear of accusation because of his solitary ways and queer chemical or alchemical experiments. He was a colourless-looking man of about thirty, and was soon found qualified to become a freeman of Providence; thereafter buying a home lot just north of Gregory Dexter's at about the foot of Olney Street. His house was built on Stampers' Hill west of the Town Street, in what later became Olney Court; and in 1761 he replaced this with a larger one, on the same site, which is still standing.

Now the first odd thing about Joseph Curwen was that he did not seem to grow much older than he had been on his arrival. He engaged in shipping enterprises, purchased wharfage near Mile-End Cove, helped rebuild the Great Bridge in 1713, and in 1723 was one of the founders of the Congregational

Church on the hill; but always did he retain the nondescript aspect of a man not greatly over thirty or thirty-five. As decades mounted up, this singular quality began to excite wide notice; but Curwen always explained it by saying that he came of hardy forefathers, and practised a simplicity of living which did not wear him out. How such simplicity could be reconciled with the inexplicable comings and goings of the secretive merchant, and with the queer gleaming of his windows at all hours of night, was not very clear to the townsfolk; and they were prone to assign other reasons for his continued youth and longevity. It was held, for the most part, that Curwen's incessant mixings and boilings of chemicals had much to do with his condition. Gossip spoke of the strange substances he brought from London and the Indies on his ships or purchased in Newport, Boston, and New York; and when old Dr. Jabez Bowen came from Rehoboth and opened his apothecary shop across the Great Bridge at the Sign of the Unicorn and Mortar, there was ceaseless talk of the drugs, acids, and metals that the taciturn recluse incessantly bought or ordered from him. Acting on the assumption that Curwen possessed a wondrous and secret medical skill, many sufferers of various sorts applied to him for aid; but though he appeared to encourage their belief in a non-committal way, and always gave them odd-coloured potions in response to

their requests, it was observed that his ministrations to others seldom proved of benefit. At length, when over fifty years had passed since the stranger's advent, and without producing more than five years' apparent change in his face and physique, the people began to whisper more darkly; and to meet more than half way that desire for isolation which he had always shewn.

Private letters and diaries of the period reveal, too, a multitude of other reasons why Joseph Curwen was marvelled at, feared, and finally shunned like a plague. His passion for graveyards, in which he was glimpsed at all hours, and under all conditions, was notorious; though no one had witnessed any deed on his part which could actually be termed ghoulish. On the Pawtuxet Road he had a farm, at which he generally lived during the summer, and to which he would frequently be seen riding at various odd times of the day or night. Here his only visible servants, farmers, and caretakers were a sullen pair of aged Narragansett Indians; the husband dumb and curiously scarred, and the wife of a very repulsive cast of countenance, probably due to a mixture of negro blood. In the lean-to of this house was the laboratory where most of the chemical experiments were conducted. Curious porters and teamers who delivered bottles, bags, or boxes at the small rear door would exchange accounts of the fantastic flasks, crucibles, alembics, and

furnaces they saw in the low shelved room; and prophesied in whispers that the close-mouthed "chymist"—by which they meant alchemist—would not be long in finding the Philosopher's Stone. The nearest neighbours to this farm—the Fenners, a quarter of a mile away—had still queerer things to tell of certain sounds which they insisted came from the Curwen place in the night. There were cries, they said, and sustained howlings; and they did not like the large number of livestock which thronged the pastures, for no such amount was needed to keep a lone old man and a very few servants in meat, milk, and wool. The identity of the stock seemed to change from week to week as new droves were purchased from the Kingstown farmers. Then, too, there was something very obnoxious about a certain great stone outbuilding with only high narrow slits for windows.

Great Bridge idlers likewise had much to say of Curwen's town house in Olney Court; not so much the fine new one built in 1761, when the man must have been nearly a century old, but the first low gambrel-roofed one with the windowless attic and shingled sides, whose timbers he took the peculiar precaution of burning after its demolition. Here there was less mystery, it is true; but the hours at which lights were seen, the secretiveness of the two swarthy foreigners who comprised the only menservants, the hideous indistinct

mumbling of the incredibly aged French housekeeper, the large amounts of food seen to enter a door within which only four persons lived, and the quality of certain voices often heard in muffled conversation at highly unseasonable times, all combined with what was known of the Pawtuxet farm to give the place a bad name.

In choicer circles, too, the Curwen home was by no means undiscussed; for as the newcomer had gradually worked into the church and trading life of the town, he had naturally made acquaintances of the better sort, whose company and conversation he was well fitted by education to enjoy. His birth was known to be good, since the Curwens or Corwins of Salem needed no introduction in New England. It developed that Joseph Curwen had travelled much in very early life, living for a time in England and making at least two voyages to the Orient; and his speech, when he deigned to use it, was that of a learned and cultivated Englishman. But for some reason or other Curwen did not care for society. Whilst never actually rebuffing a visitor, he always reared such a wall of reserve that few could think of anything to say to him which would not sound inane.

There seemed to lurk in his bearing some cryptic, sardonic arrogance, as if he had come to find all human beings dull through having moved among stranger and more potent entities. When Dr. Checkley,

the famous wit, came from Boston in 1738 to be rector of King's Church, he did not neglect calling on one of whom he soon heard so much; but left in a very short while because of some sinister undercurrent he detected in his host's discourse. Charles Ward told his father, when they discussed Curwen one winter evening, that he would give much to learn what the mysterious old man had said to the sprightly cleric, but that all diarists agree concerning Dr. Checkley's reluctance to repeat anything he had heard. The good man had been hideously shocked, and could never recall Joseph Curwen without a visible loss of the gay urbanity for which he was famed.

More definite, however, was the reason why another man of taste and breeding avoided the haughty hermit. In 1746 Mr. John Merritt, an elderly English gentleman of literary and scientific leanings, came from Newport to the town which was so rapidly overtaking it in standing, and built a fine country seat on the Neck in what is now the heart of the best residence section. He lived in considerable style and comfort, keeping the first coach and liveried servants in town, and taking great pride in his telescope, his microscope, and his well-chosen library of English and Latin books. Hearing of Curwen as the owner of the best library in Providence, Mr. Merritt early paid him a call, and was more cordially received than

most other callers at the house had been. His admiration for his host's ample shelves, which besides the Greek, Latin, and English classics were equipped with a remarkable battery of philosophical, mathematical, and scientific works including Paracelsus, Agricola, Van Helmont, Sylvius, Glauber, Boyle, Boerhaave, Becher, and Stahl, led Curwen to suggest a visit to the farmhouse and laboratory whither he had never invited anyone before; and the two drove out at once in Mr. Merritt's coach.

Mr. Merritt always confessed to seeing nothing really horrible at the farmhouse, but maintained that the titles of the books in the special library of thaumaturgical, alchemical, and theological subjects which Curwen kept in a front room were alone sufficient to inspire him with a lasting loathing. Perhaps, however, the facial expression of the owner in exhibiting them contributed much of the prejudice. This bizarre collection, besides a host of standard works which Mr. Merritt was not too alarmed to envy, embraced nearly all the cabbalists, daemonologists, and magicians known to man; and was a treasure-house of lore in the doubtful realms of alchemy and astrology. Hermes Trismegistus in Mesnard's edition, the Turba Philosophorum, Geber's Liber Investigationis, and Artephius's Key of Wisdom all were there; with the cabbalistic Zohar, Peter Jammy's set of Albertus Magnus, Raymond

Lully's *Ars Magna et Ultima* in Zetzner's edition, Roger Bacon's *Thesaurus Chemicus*, Fludd's *Clavis Alchimiae*, and Trithemius' *De Lapide Philosophico* crowding them close. Mediaeval Jews and Arabs were represented in profusion, and Mr. Merritt turned pale when, upon taking down a fine volume conspicuously labelled as the *Qanoon-e-Islam*, he found it was in truth the forbidden *Necronomicon* of the mad Arab Abdul Alhazred, of which he had heard such monstrous things whispered some years previously after the exposure of nameless rites at the strange little fishing village of Kingsport, in the Province of the Massachusetts-Bay.

But oddly enough, the worthy gentleman owned himself most impalpably disquieted by a mere minor detail. On the huge mahogany table there lay face downwards a badly worn copy of Borellus, bearing many cryptical marginalia and interlineations in Curwen's hand. The book was open at about its middle, and one paragraph displayed such thick and tremulous pen-strokes beneath the lines of mystic black-letter that the visitor could not resist scanning it through. Whether it was the nature of the passage underscored, or the feverish heaviness of the strokes which formed the underscoring, he could not tell; but something in that combination affected him very badly and very peculiarly. He recalled it to the end of his days, writing it down from memory in his

diary and once trying to recite it to his close friend Dr. Checkley till he saw how greatly it disturbed the urbane rector. It read:

The essential Saltes of Animals may be so prepared and preserved, that an ingenious Man may have the whole Ark of Noah in his own Studie, and raise the fine Shape of an Animal out of its Ashes at his Pleasure; and by the lyke Method from the essential Saltes of humane Dust, a Philosopher may, without any criminal Necromancy, call up the Shape of any dead Ancestour from the Dust whereinto his Bodie has been incinerated.

It was near the docks along the southerly part of the Town Street, however, that the worst things were muttered about Joseph Curwen. Sailors are superstitious folk; and the seasoned salts who manned the infinite rum, slave, and molasses sloops, the rakish privateers, and the great brigs of the Browns, Crawfords, and Tillinghasts, all made strange furtive signs of protection when they saw the slim, deceptively young-looking figure with its yellow hair and slight stoop entering the Curwen warehouse in Doubloon Street or talking with captains and supercargoes on the long quay where the Curwen ships rode restlessly. Curwen's own clerks and captains hated and feared him, and all his sailors were mongrel riff-raff from Martinique, St. Eustatius, Havana, or Port Royal. It was, in a way, the

frequency with which these sailors were replaced which inspired the acutest and most tangible part of the fear in which the old man was held. A crew would be turned loose in the town on shore leave, some of its members perhaps charged with this errand or that; and when reassembled it would be almost sure to lack one or more men. That many of the errands had concerned the farm on the Pawtuxet Road, and that few of the sailors had ever been seen to return from that place, was not forgotten; so that in time it became exceedingly difficult for Curwen to keep his oddly assorted hands. Almost invariably several would desert soon after hearing the gossip of the Providence wharves, and their replacement in the West Indies became an increasingly great problem to the merchant.

By 1760 Joseph Curwen was virtually an outcast, suspected of vague horrors and daemoniac alliances which seemed all the more menacing because they could not be named, understood, or even proved to exist. The last straw may have come from the affair of the missing soldiers in 1758, for in March and April of that year two Royal regiments on their way to New France were quartered in Providence, and depleted by an inexplicable process far beyond the average rate of desertion. Rumour dwelt on the frequency with which Curwen was wont to be seen talking with the red-coated strangers; and as several of them

began to be missed, people thought of the odd conditions among his own seamen. What would have happened if the regiments had not been ordered on, no one can tell.

Meanwhile the merchant's worldly affairs were prospering. He had a virtual monopoly of the town's trade in saltpetre, black pepper, and cinnamon, and easily led any other one shipping establishment save the Browns in his importation of brassware, indigo, cotton, woollens, salt, rigging, iron, paper, and English goods of every kind. Such shopkeepers as James Green, at the Sign of the Elephant in Cheapside, the Russells, at the Sign of the Golden Eagle across the Bridge, or Clark and Nightingale at the Frying-Pan and Fish near the New Coffee-House, depended almost wholly upon him for their stock; and his arrangements with the local distillers, the Narragansett dairymen and horse-breeders, and the Newport candle-makers, made him one of the prime exporters of the Colony.

Ostracised though he was, he did not lack for civic spirit of a sort. When the Colony House burned down, he subscribed handsomely to the lotteries by which the new brick one—still standing at the head of its parade in the old main street—was built in 1761. In that same year, too, he helped rebuild the Great Bridge after the October gale. He replaced many of the books of the public library consumed in the Colony House fire, and bought heavily in

the lottery that gave the muddy Market Parade and deep-rutted Town Street their pavement of great round stones with a brick footwalk or "causey" in the middle. About this time, also, he built the plain but excellent new house whose doorway is still such a triumph of carving.

When the Whitefield adherents broke off from Dr. Cotton's hill church in 1743 and founded Deacon Snow's church across the Bridge, Curwen had gone with them; though his zeal and attendance soon abated. Now, however, he cultivated piety once more; as if to dispel the shadow which had thrown him into isolation and would soon begin to wreck his business fortunes if not sharply checked.

II.

The sight of this strange, pallid man, hardly middle-aged in aspect yet certainly not less than a full century old, seeking at last to emerge from a cloud of fright and detestation too vague to pin down or analyse, was at once a pathetic, a dramatic, and a contemptible thing. Such is the power of wealth and of surface gestures, however, that there came indeed a slight abatement in the visible aversion displayed toward him; especially after the rapid disappearances of his sailors abruptly ceased. He must likewise have begun to practice an extreme care and secrecy in his graveyard

expeditions, for he was never again caught at such wanderings; whilst the rumours of uncanny sounds and manoeuvres at his Pawtuxet farm diminished in proportion. His rate of food consumption and cattle replacement remained abnormally high; but not until modern times, when Charles Ward examined a set of his accounts and invoices in the Shepley Library, did it occur to any person—save one embittered youth, perhaps—to make dark comparisons between the large number of Guinea blacks he imported until 1766, and the disturbingly small number for whom he could produce bona fide bills of sale either to slave-dealers at the Great Bridge or to the planters of the Narragansett Country. Certainly, the cunning and ingenuity of this abhorred character were uncannily profound, once the necessity for their exercise had become impressed upon him.

But of course the effect of all this belated mending was necessarily slight. Curwen continued to be avoided and distrusted, as indeed the one fact of his continued air of youth at a great age would have been enough to warrant; and he could see that in the end his fortunes would be likely to suffer. His elaborate studies and experiments, whatever they may have been, apparently required a heavy income for their maintenance; and since a change of environment would deprive him of the trading advantages he had

gained, it would not have profited him to begin anew in a different region just then. Judgment demanded that he patch up his relations with the townsfolk of Providence, so that his presence might no longer be a signal for hushed conversation, transparent excuses of errands elsewhere, and a general atmosphere of constraint and uneasiness. His clerks, being now reduced to the shiftless and impecunious residue whom no one else would employ, were giving him much worry; and he held to his sea-captains and mates only by shrewdness in gaining some kind of ascendancy over them—a mortgage, a promissory note, or a bit of information very pertinent to their welfare. In many cases, diarists have recorded with some awe, Curwen shewed almost the power of a wizard in unearthing family secrets for questionable use. During the final five years of his life it seemed as though only direct talks with the long-dead could possibly have furnished some of the data which he had so glibly at his tongue's end.

About this time the crafty scholar hit upon a last desperate expedient to regain his footing in the community. Hitherto a complete hermit, he now determined to contract an advantageous marriage; securing as a bride some lady whose unquestioned position would make all ostracism of his home impossible. It may be that he also had deeper

reasons for wishing an alliance; reasons so far outside the known cosmic sphere that only papers found a century and a half after his death caused anyone to suspect them; but of this nothing certain can ever be learned. Naturally he was aware of the horror and indignation with which any ordinary courtship of his would be received, hence he looked about for some likely candidate upon whose parents he might exert a suitable pressure. Such candidates, he found, were not at all easy to discover; since he had very particular requirements in the way of beauty, accomplishments, and social security. At length his survey narrowed down to the household of one of his best and oldest ship-captains, a widower of high birth and unblemished standing named Dutee Tillinghast, whose only daughter Eliza seemed dowered with every conceivable advantage save prospects as an heiress. Capt. Tillinghast was completely under the domination of Curwen; and consented, after a terrible interview in his cupolaed house on Power's Lane hill, to sanction the blasphemous alliance.

Eliza Tillinghast was at that time eighteen years of age, and had been reared as gently as the reduced circumstances of her father permitted. She had attended Stephen Jackson's school opposite the Court-House Parade; and had been diligently instructed by her mother, before the

latter's death of smallpox in 1757, in all the arts and refinements of domestic life. A sampler of hers, worked in 1753 at the age of nine, may still be found in the rooms of the Rhode Island Historical Society. After her mother's death she had kept the house, aided only by one old black woman. Her arguments with her father concerning the proposed Curwen marriage must have been painful indeed; but of these we have no record. Certain it is that her engagement to young Ezra Weeden, second mate of the Crawford packet *Enterprise*, was dutifully broken off, and that her union with Joseph Curwen took place on the seventh of March, 1763, in the Baptist church, in the presence of one of the most distinguished assemblages which the town could boast; the ceremony being performed by the younger Samuel Winsor. The *Gazette* mentioned the event very briefly, and in most surviving copies the item in question seems to be cut or torn out. Ward found a single intact copy after much search in the archives of a private collector of note, observing with amusement the meaningless urbanity of the language:

Monday evening last, Mr. Joseph Curwen, of this Town, Merchant, was married to Miss Eliza Tillinghast, Daughter of Capt. Dutee Tillinghast, a young Lady who has real Merit, added to a beautiful Person, to grace the connubial State and perpetuate its Felicity.

The collection of Durfee-Arnold letters, discovered by Charles Ward shortly before his first reputed madness in the private collection of Melville F. Peters, Esq., of George St., and covering this and a somewhat antecedent period, throws vivid light on the outrage done to public sentiment by this ill-assorted match. The social influence of the Tillinghasts, however, was not to be denied; and once more Joseph Curwen found his house frequented by persons whom he could never otherwise have induced to cross his threshold. His acceptance was by no means complete, and his bride was socially the sufferer through her forced venture; but at all events the wall of utter ostracism was somewhat worn down. In his treatment of his wife the strange bridegroom astonished both her and the community by displaying an extreme graciousness and consideration. The new house in Olney Court was now wholly free from disturbing manifestations, and although Curwen was much absent at the Pawtuxet farm which his wife never visited, he seemed more like a normal citizen than at any other time in his long years of residence. Only one person remained in open enmity with him, this being the youthful ship's officer whose engagement to Eliza Tillinghast had been so abruptly broken. Ezra Weeden had frankly vowed vengeance; and though of a quiet and ordinarily mild disposition, was now gaining a hate-bred, dogged

purpose which boded no good to the usurping husband.

On the seventh of May, 1765, Curwen's only child Ann was born; and was christened by the Rev. John Graves of King's Church, of which both husband and wife had become communicants shortly after their marriage, in order to compromise between their respective Congregational and Baptist affiliations. The record of this birth, as well as that of the marriage two years before, was stricken from most copies of the church and town annals where it ought to appear; and Charles Ward located both with the greatest difficulty after his discovery of the widow's change of name had apprised him of his own relationship, and engendered the feverish interest which culminated in his madness. The birth entry, indeed, was found very curiously through correspondence with the heirs of the loyalist Dr. Graves, who had taken with him a duplicate set of records when he left his pastorate at the outbreak of the Revolution. Ward had tried this source because he knew that his great-great-grandmother Ann Tillinghast Potter had been an Episcopalian.

Shortly after the birth of his daughter, an event he seemed to welcome with a fervour greatly out of keeping with his usual coldness, Curwen resolved to sit for a portrait. This he had painted by a very gifted Scotsman named Cosmo Alexander, then a resident of Newport, and

since famous as the early teacher of Gilbert Stuart. The likeness was said to have been executed on a wall-panel of the library of the house in Olney Court, but neither of the two old diaries mentioning it gave any hint of its ultimate disposition. At this period the erratic scholar shewed signs of unusual abstraction, and spent as much time as he possibly could at his farm on the Pawtuxet Road. He seemed, it was stated, in a condition of suppressed excitement or suspense; as if expecting some phenomenal thing or on the brink of some strange discovery. Chemistry or alchemy would appear to have played a great part, for he took from his house to the farm the greater number of his volumes on that subject.

His affectation of civic interest did not diminish, and he lost no opportunities for helping such leaders as Stephen Hopkins, Joseph Brown, and Benjamin West in their efforts to raise the cultural tone of the town, which was then much below the level of Newport in its patronage of the liberal arts. He had helped Daniel Jenckes found his bookshop in 1763, and was thereafter his best customer; extending aid likewise to the struggling *Gazette* that appeared each Wednesday at the Sign of Head. In politics he ardently supported Governor Hopkins against the Ward party whose prime strength was in Newport, and his really eloquent speech at Hacher's Hall in 1765

against the setting off of North Providence as a separate town with a pro-Ward vote in the General Assembly did more than any other one thing to wear down the prejudice against him. But Ezra Weeden, who watched him closely, sneered cynically at all this outward activity; and freely swore it was no more than a mask for some nameless traffick with the blackest gulfs of Tartarus. The revengeful youth began a systematic study of the man and his doings whenever he was in port; spending hours at night by the wharves with a dory in readiness when he saw lights in the Curwen warehouses, and following the small boat which would sometimes steal quietly off and down the bay. He also kept as close a watch as possible on the Pawtuxet farm, and was once severely bitten by the dogs the old Indian couple loosed upon him.

III.

In 1766 came the final change in Joseph Curwen. It was very sudden, and gained wide notice amongst the curious townsfolk; for the air of suspense and expectancy dropped like an old cloak, giving instant place to an ill-concealed exaltation of perfect triumph. Curwen seemed to have difficulty in restraining himself from public harangues on what he had found or learned or made; but apparently the need of secrecy was greater than the longing to share his

rejoicing, for no explanation was ever offered by him. It was after this transition, which appears to have come early in July, that the sinister scholar began to astonish people by his possession of information which only their long-dead ancestors would seem to be able to impart.

But Curwen's feverish secret activities by no means ceased with this change. On the contrary, they tended rather to increase; so that more and more of his shipping business was handled by the captains whom he now bound to him by ties of fear as potent as those of bankruptcy had been. He altogether abandoned the slave trade, alleging that its profits were constantly decreasing. Every possible moment was spent at the Pawtuxet farm; though there were rumours now and then of his presence in places which, though not actually near graveyards, were yet so situated in relation to graveyards that thoughtful people wondered just how thorough the old merchant's change of habits really was. Ezra Weeden, though his periods of espionage were necessarily brief and intermittent on account of his sea voyaging, had a vindictive persistence which the bulk of the practical townsfolk and farmers lacked; and subjected Curwen's affairs to a scrutiny such as they had never had before.

Many of the odd manoeuvres of the strange merchant's vessels had been taken for granted on account

of the unrest of the times, when every colonist seemed determined to resist the provisions of the Sugar Act which hampered a prominent traffick. Smuggling and evasion were the rule in Narragansett Bay, and nocturnal landings of illicit cargoes were continuous commonplaces. But Weeden, night after night following the lighters or small sloops which he saw steal off from the Curwen warehouses at the Town Street docks, soon felt assured that it was not merely His Majesty's armed ships which the sinister skulker was anxious to avoid. Prior to the change in 1766 these boats had for the most part contained chained negroes, who were carried down and across the bay and landed at an obscure point on the shore just north of Pawtuxet; being afterward driven up the bluff and across country to the Curwen farm, where they were locked in that enormous stone outbuilding which had only high narrow slits for windows. After that change, however, the whole programme was altered. Importation of slaves ceased at once, and for a time Curwen abandoned his midnight sailings. Then, about the spring of 1767, a new policy appeared. Once more the lighters grew wont to put out from the black, silent docks, and this time they would go down the bay some distance, perhaps as far as Namquit Point, where they would meet and receive cargo from strange ships of considerable size and widely varied appearance. Curwen's sailors would

then deposit this cargo at the usual point on the shore, and transport it overland to the farm; locking it in the same cryptical stone building which had formerly received the negroes. The cargo consisted almost wholly of boxes and cases, of which a large proportion were oblong and heavy and disturbingly suggestive of coffins.

Weeden always watched the farm with unremitting assiduity; visiting it each night for long periods, and seldom letting a week go by without a sight except when the ground bore a footprint-revealing snow. Even then he would often walk as close as possible in the travelled road or on the ice of the neighbouring river to see what tracks others might have left. Finding his own vigils interrupted by nautical duties, he hired a tavern companion named Eleazar Smith to continue the survey during his absences; and between them the two could have set in motion some extraordinary rumours. That they did not do so was only because they knew the effect of publicity would be to warn their quarry and make further progress impossible. Instead, they wished to learn something definite before taking any action. What they did learn must have been startling indeed, and Charles Ward spoke many times to his parents of his regret at Weeden's later burning of his notebooks. All that can be told of their discoveries is what Eleazar Smith jotted down in a none too

coherent diary, and what other diarists and letter-writers have timidly repeated from the statements which they finally made—and according to which the farm was only the outer shell of some vast and revolting menace, of a scope and depth too profound and intangible for more than shadowy comprehension.

It is gathered that Weeden and Smith became early convinced that a great series of tunnels and catacombs, inhabited by a very sizeable staff of persons besides the old Indian and his wife, underlay the farm. The house was an old peaked relic of the middle seventeenth century with enormous stack chimney and diamond-paned lattice windows, the laboratory being in a lean-to toward the north, where the roof came nearly to the ground. This building stood clear of any other; yet judging by the different voices heard at odd times within, it must have been accessible through secret passages beneath. These voices, before 1766, were mere mumblings and negro whisperings and frenzied screams, coupled with curious chants or invocations. After that date, however, they assumed a very singular and terrible cast as they ran the gamut betwixt dronings of dull acquiescence and explosions of frantic pain or fury, rumblings of conversation and whines of entreaty, pantings of eagerness and shouts of protest. They appeared to be in different languages, all known to

Curwen, whose rasping accents were frequently distinguishable in reply, reproof, or threatening. Sometimes it seemed that several persons must be in the house; Curwen, certain captives, and the guards of those captives. There were voices of a sort that neither Weeden nor Smith had ever heard before despite their wide knowledge of foreign parts, and many that they did seem to place as belonging to this or that nationality. The nature of the conversations seemed always a kind of catechism, as if Curwen were extorting some sort of information from terrified or rebellious prisoners.

Weeden had many verbatim reports of overheard scraps in his notebook, for English, French, and Spanish, which he knew, were frequently used; but of these nothing has survived. He did, however, say that besides a few ghoulis dialogues in which the past affairs of Providence families were concerned, most of the questions and answers he could understand were historical or scientific; occasionally pertaining to very remote places and ages. Once, for example, an alternately raging and sullen figure was questioned in French about the Black Prince's massacre at Limoges in 1370, as if there were some hidden reason which he ought to know. Curwen asked the prisoner—if prisoner it were—whether the order to slay was given because of the Sign of the Goat found on the altar in the ancient Roman crypt beneath the

Cathedral, or whether the Dark Man of the Haute Vienne Coven had spoken the Three Words. Failing to obtain replies, the inquisitor had seemingly resorted to extreme means; for there was a terrific shriek followed by silence and muttering and a bumping sound.

None of these colloquies was ever ocularly witnessed, since the windows were always heavily draped. Once, though, during a discourse in an unknown tongue, a shadow was seen on the curtain which startled Weeden exceedingly; reminding him of one of the puppets in a show he had seen in the autumn of 1764 in Hacher's Hall, when a man from Germantown, Pennsylvania, had given a clever mechanical spectacle advertised as "View of the Famous City of Jerusalem, in which are represented Jerusalem, the Temple of Solomon, his Royal Throne, the noted Towers, and Hills, likewise the Sufferings of Our Saviour from the Garden of Gethsemane to the Cross on the Hill of Golgotha; an artful piece of Statuary, Worthy to be seen by the Curious." It was on this occasion that the listener, who had crept close to the window of the front room whence the speaking proceeded, gave a start which roused the old Indian pair and caused them to loose the dogs on him. After that no more conversations were ever heard in the house, and Weeden and Smith concluded that Curwen had transferred his field of action to regions below.

That such regions in truth existed, seemed amply clear from many things. Faint cries and groans unmistakably came up now and then from what appeared to be the solid earth in places far from any structure; whilst hidden in the bushes along the river-bank in the rear, where the high ground sloped steeply down to the valley of the Pawtuxet, there was found an arched oaken door in a frame of heavy masonry, which was obviously an entrance to caverns within the hill. When or how these catacombs could have been constructed, Weeden was unable to say; but he frequently pointed out how easily the place might have been reached by bands of unseen workmen from the river. Joseph Curwen put his mongrel seamen to diverse uses indeed! During the heavy spring rains of 1769 the two watchers kept a sharp eye on the steep river-bank to see if any subterrene secrets might be washed to light, and were rewarded by the sight of a profusion of both human and animal bones in places where deep gullies had been worn in the banks. Naturally there might be many explanations of such things in the rear of a stock farm, and in a locality where old Indian burying-grounds were common, but Weeden and Smith drew their own inferences.

It was in January 1770, whilst Weeden and Smith were still debating vainly on what, if anything, to think or do about the whole bewildering business, that the incident of

the Fortaleza occurred. Exasperated by the burning of the revenue sloop *Liberty* at Newport during the previous summer, the customs fleet under Admiral Wallace had adopted an increased vigilance concerning strange vessels; and on this occasion His Majesty's armed schooner *Cygnnet*, under Capt. Charles Leslie, captured after a short pursuit one early morning the scow *Fortaleza* of Barcelona, Spain, under Capt. Manuel Arruda, bound according to its log from Grand Cairo, Egypt, to Providence. When searched for contraband material, this ship revealed the astonishing fact that its cargo consisted exclusively of Egyptian mummies, consigned to "Sailor A. B. C.," who would come to remove his goods in a lighter just off Namquit Point and whose identity Capt. Arruda felt himself in honour bound not to reveal. The Vice-Admiralty Court at Newport, at a loss what to do in view of the non-contraband nature of the cargo on the one hand and of the unlawful secrecy of the entry on the other hand, compromised on Collector Robinson's recommendation by freeing the ship but forbidding it a port in Rhode Island waters. There were later rumours of its having been seen in Boston Harbour, though it never openly entered the Port of Boston.

This extraordinary incident did not fail of wide remark in Providence, and there were not many who doubted the existence of some

connexion between the cargo of mummies and the sinister Joseph Curwen. His exotic studies and his curious chemical importations being common knowledge, and his fondness for graveyards being common suspicion; it did not take much imagination to link him with a freakish importation which could not conceivably have been destined for anyone else in the town. As if conscious of this natural belief, Curwen took care to speak casually on several occasions of the chemical value of the balsams found in mummies; thinking perhaps that he might make the affair seem less unnatural, yet stopping just short of admitting his participation. Weeden and Smith, of course, felt no doubt whatsoever of the significance of the thing; and indulged in the wildest theories concerning Curwen and his monstrous labours.

The following spring, like that of the year before, had heavy rains; and the watchers kept careful track of the river-bank behind the Curwen farm. Large sections were washed away, and a certain number of bones discovered; but no glimpse was afforded of any actual subterranean chambers or burrows. Something was rumoured, however, at the village of Pawtuxet about a mile below, where the river flows in falls over a rocky terrace to join the placid land-locked cove. There, where quaint old cottages climbed the hill from the rustic bridge, and fishing-smacks lay anchored at their sleepy docks, a

vague report went round of things that were floating down the river and flashing into sight for a minute as they went over the falls. Of course the Pawtuxet is a long river which winds through many settled regions abounding in graveyards, and of course the spring rains had been very heavy; but the fisherfolk about the bridge did not like the wild way that one of the things stared as it shot down to the still water below, or the way that another half cried out although its condition had greatly departed from that of objects which normally cry out. That rumour sent Smith—for Weeden was just then at sea—in haste to the river-bank behind the farm; where surely enough there remained the evidences of an extensive cave-in. There was, however, no trace of a passage into the steep bank; for the miniature avalanche had left behind a solid wall of mixed earth and shrubbery from aloft. Smith went to the extent of some experimental digging, but was deterred by lack of success—or perhaps by fear of possible success. It is interesting to speculate on what the persistent and revengeful Weeden would have done had he been ashore at the time.

IV.

By the autumn of 1770 Weeden decided that the time was ripe to tell others of his discoveries; for he had a large number of facts to link together,

and a second eye-witness to refute the possible charge that jealousy and vindictiveness had spurred his fancy. As his first confidant he selected Capt. James Mathewson of the *Enterprise*, who on the one hand knew him well enough not to doubt his veracity, and on the other hand was sufficiently influential in the town to be heard in turn with respect. The colloquy took place in an upper room of Sabin's Tavern near the docks, with Smith present to corroborate virtually every statement; and it could be seen that Capt. Mathewson was tremendously impressed. Like nearly everyone else in the town, he had had black suspicions of his own anent Joseph Curwen; hence it needed only this confirmation and enlargement of data to convince him absolutely. At the end of the conference he was very grave, and enjoined strict silence upon the two younger men. He would, he said, transmit the information separately to some ten or so of the most learned and prominent citizens of Providence; ascertaining their views and following whatever advice they might have to offer. Secrecy would probably be essential in any case, for this was no matter that the town constables or militia could cope with; and above all else the excitable crowd must be kept in ignorance, lest there be enacted in these already troublous times a repetition of that frightful Salem panic of less than a century

before which had first brought Curwen hither.

The right persons to tell, he believed, would be Dr. Benjamin West, whose pamphlet on the late transit of Venus proved him a scholar and keen thinker; Rev. James Manning, President of the College which had just moved up from Warren and was temporarily housed in the new King Street schoolhouse awaiting the completion of its building on the hill above Presbyterian-Lane; ex-Governor Stephen Hopkins, who had been a member of the Philosophical Society at Newport, and was a man of very broad perceptions; John Carter, publisher of the *Gazette*; all four of the Brown brothers, John, Joseph, Nicholas, and Moses, who formed the recognised local magnates, and of whom Joseph was an amateur scientist of parts; old Dr. Jabez Bowen, whose erudition was considerable, and who had much first-hand knowledge of Curwen's odd purchases; and Capt. Abraham Whipple, a privateersman of phenomenal boldness and energy who could be counted on to lead in any active measures needed. These men, if favourable, might eventually be brought together for collective deliberation; and with them would rest the responsibility of deciding whether or not to inform the Governor of the Colony, Joseph Wanton of Newport, before taking action.

The mission of Capt. Mathewson

prospered beyond his highest expectations; for whilst he found one or two of the chosen confidants somewhat sceptical of the possible ghastly side of Weeden's tale, there was not one who did not think it necessary to take some sort of secret and coördinated action. Curwen, it was clear, formed a vague potential menace to the welfare of the town and Colony; and must be eliminated at any cost. Late in December 1770 a group of eminent townsmen met at the home of Stephen Hopkins and debated tentative measures. Weeden's notes, which he had given to Capt. Mathewson, were carefully read; and he and Smith were summoned to give testimony anent details. Something very like fear seized the whole assemblage before the meeting was over, though there ran through that fear a grim determination which Capt. Whipple's bluff and resonant profanity best expressed. They would not notify the Governor, because a more than legal course seemed necessary. With hidden powers of uncertain extent apparently at his disposal, Curwen was not a man who could safely be warned to leave town. Nameless reprisals might ensue, and even if the sinister creature complied, the removal would be no more than the shifting of an unclean burden to another place. The times were lawless, and men who had flouted the King's revenue forces for years were not the ones to balk at sterner things when duty impelled. Curwen must be surprised at his Pawtuxet

farm by a large raiding-party of seasoned privateersmen and given one decisive chance to explain himself. If he proved a madman, amusing himself with shrieks and imaginary conversations in different voices, he would be properly confined. If something graver appeared, and if the underground horrors indeed turned out to be real, he and all with him must die. It could be done quietly, and even the widow and her father need not be told how it came about.

While these serious steps were under discussion there occurred in the town an incident so terrible and inexplicable that for a time little else was mentioned for miles around. In the middle of a moonlight January night with heavy snow underfoot there resounded over the river and up the hill a shocking series of cries which brought sleepy heads to every window; and people around Weybosset Point saw a great white thing plunging frantically along the badly cleared space in front of the Turk's Head. There was a baying of dogs in the distance, but this subsided as soon as the clamour of the awakened town became audible. Parties of men with lanterns and muskets hurried out to see what was happening, but nothing rewarded their search. The next morning, however, a giant, muscular body, stark naked, was found on the jams of ice around the southern piers of the Great Bridge, where the Long Dock stretched out beside Abbott's

distil-house, and the identity of this object became a theme for endless speculation and whispering. It was not so much the younger as the older folk who whispered, for only in the patriarchs did that rigid face with horror-bulging eyes strike any chord of memory. They, shaking as they did so, exchanged furtive murmurs of wonder and fear; for in those stiff, hideous features lay a resemblance so marvellous as to be almost an identity—and that identity was with a man who had died full fifty years before.

Ezra Weeden was present at the finding; and remembering the baying of the night before, set out along Weybosset Street and across Muddy Dock Bridge whence the sound had come. He had a curious expectancy, and was not surprised when, reaching the edge of the settled district where the street merged into the Pawtuxet Road, he came upon some very curious tracks in the snow. The naked giant had been pursued by dogs and many booted men, and the returning tracks of the hounds and their masters could be easily traced. They had given up the chase upon coming too near the town. Weeden smiled grimly, and as a perfunctory detail traced the footprints back to their source. It was the Pawtuxet farm of Joseph Curwen, as he well knew it would be; and he would have given much had the yard been less confusingly trampled. As it was, he dared not seem too interested in full daylight. Dr. Bowen, to whom

Weeden went at once with his report, performed an autopsy on the strange corpse, and discovered peculiarities which baffled him utterly. The digestive tracts of the huge man seemed never to have been in use, whilst the whole skin had a coarse, loosely knit texture impossible to account for. Impressed by what the old men whispered of this body's likeness to the long-dead blacksmith Daniel Green, whose great-grandson Aaron Hoppin was a supercargo in Curwen's employ, Weeden asked casual questions till he found where Green was buried. That night a party of ten visited the old North Burying Ground opposite Herrenden's Lane and opened a grave. They found it vacant, precisely as they had expected.

Meanwhile arrangements had been made with the post riders to intercept Joseph Curwen's mail, and shortly before the incident of the naked body there was found a letter from one Jedediah Orne of Salem which made the coöperating citizens think deeply. Parts of it, copied and preserved in the private archives of the Smith family where Charles Ward found it, ran as follows:

*I delight that you continue in ye
Gett'g at Olde Matters in your Way,
and doe not think better was done at
Mr. Hutchinson's in Salem-Village.
Certainly, there was Noth'g butt ye
liveliest Awfulness in that which H.
rais'd upp from What he could gather
onlie a part of. What you sente, did not
Worke, whether because of Any Thing*

miss'g, or because ye Wordes were not Righte from my Speak'g or yr Copy'g. I alone am at a Loss. I have not ye Chymicall art to followe Borellus, and owne my Self confounded by ye VII. Booke of ye Necronomicon that you recommende. But I would have you Observe what was tolde to us aboute tak'g Care whom to calle up, for you are Sensible what Mr. Mather writ in ye Marginalia of —, and can judge how truly that Horrendous thing is reported. I say to you againe, doe not call up Any that you can not put downe; by the Which I meane, Any that can in Turne call up somewhat against you, whereby your Powerfullst Devices may not be of use. Ask of the Lesser, lest the Greater shall not wish to Answer, and shall commande more than you. I was frightened when I read of your know'g what Ben Zariatnatmik hadde in his ebony Boxe, for I was conscious who must have tolde you. And againe I ask that you shalle write me as Jedediah and not Simon. In this Community a Man may not live too long, and you knowe my Plan by which I came back as my Son. I am desirous you will Acquaint me with what ye Blacke Man learnt from Sylvanus Cocidius in ye Vault, under ye Roman Wall, and will be oblig'd for ye Lend'g of ye MS. you speak of.

Another and unsigned letter from Philadelphia provoked equal thought, especially for the following passage:

I will observe what you say respecting the sending of Accounts only

by yr Vessels, but can not always be certain when to expect them. In the Matter spoke of, I require onlie one more thing; but wish to be sure I apprehend you exactly. You inform me, that no Part must be missing if the finest Effects are to be had, but you can not but know how hard it is to be sure. It seems a great Hazard and Burthen to take away the whole Box, and in Town (i.e. St. Peter's, St. Paul's, St. Mary's, or Christ Church) it can scarce be done at all. But I know what Imperfections were in the one I rais'd up October last, and how many live Specimens you were forc'd to employ before you hit upon the right Mode in the year 1766; so will be guided by you in all Matters. I am impatient for yr Brig, and inquire daily at Mr. Biddle's Wharf.

A third suspicious letter was in an unknown tongue and even an unknown alphabet. In the Smith diary found by Charles Ward a single oft-repeated combination of characters is clumsily copied; and authorities at Brown University have pronounced the alphabet Amharic or Abyssinian, although they do not recognise the word. None of these epistles was ever delivered to Curwen, though the disappearance of Jedediah Orne from Salem as recorded shortly afterward shewed that the Providence men took certain quiet steps. The Pennsylvania Historical Society also has some curious letters received by Dr. Shippen regarding the presence of an unwholesome character in

Philadelphia. But more decisive steps were in the air, and it is in the secret assemblages of sworn and tested sailors and faithful old privateersmen in the Brown warehouses by night that we must look for the main fruits of Weeden's disclosures. Slowly and surely a plan of campaign was under development which would leave no trace of Joseph Curwen's noxious mysteries.

Curwen, despite all precautions, apparently felt that something was in the wind; for he was now remarked to wear an unusually worried look. His coach was seen at all hours in the town and on the Pawtuxet Road, and he dropped little by little the air of forced geniality with which he had latterly sought to combat the town's prejudice. The nearest neighbours to his farm, the Fenners, one night remarked a great shaft of light shooting into the sky from some aperture in the roof of that cryptical stone building with the high, excessively narrow windows; an event which they quickly communicated to John Brown in Providence. Mr. Brown had become the executive leader of the select group bent on Curwen's extirpation, and had informed the Fenners that some action was about to be taken. This he deemed needful because of the impossibility of their not witnessing the final raid; and he explained his course by saying that Curwen was known to be a spy of the customs officers at Newport, against whom the hand of every Providence shipper,

merchant, and farmer was openly or clandestinely raised. Whether the ruse was wholly believed by neighbours who had seen so many queer things is not certain; but at any rate the Fenners were willing to connect any evil with a man of such queer ways. To them Mr. Brown had entrusted the duty of watching the Curwen farmhouse, and of regularly reporting every incident which took place there.

V.

The probability that Curwen was on guard and attempting unusual things, as suggested by the odd shaft of light, precipitated at last the action so carefully devised by the band of serious citizens. According to the Smith diary a company of about one hundred men met at 10 p.m. on Friday, April 12th, 1771, in the great room of Thurston's Tavern at the Sign of the Golden Lion on Weybosset Point across the Bridge. Of the guiding group of prominent men in addition to the leader John Brown there were present Dr. Bowen, with his case of surgical instruments, President Manning without the great periwig (the largest in the Colonies) for which he was noted, Governor Hopkins, wrapped in his dark cloak and accompanied by his seafaring brother Esek, whom he had initiated at the last moment with the permission of the rest, John Carter,

Capt. Mathewson, and Capt. Whipple, who was to lead the actual raiding party. These chiefs conferred apart in a rear chamber, after which Capt. Whipple emerged to the great room and gave the gathered seamen their last oaths and instructions. Eleazar Smith was with the leaders as they sat in the rear apartment awaiting the arrival of Ezra Weeden, whose duty was to keep track of Curwen and report the departure of his coach for the farm.

About 10:30 a heavy rumble was heard on the Great Bridge, followed by the sound of a coach in the street outside; and at that hour there was no need of waiting for Weeden in order to know that the doomed man had set out for his last night of unhallowed wizardry. A moment later, as the receding coach clattered faintly over the Muddy Dock Bridge, Weeden appeared; and the raiders fell silently into military order in the street, shouldering the firelocks, fowling-pieces, or whaling harpoons which they had with them. Weeden and Smith were with the party, and of the deliberating citizens there were present for active service Capt. Whipple, the leader, Capt. Esek Hopkins, John Carter, President Manning, Capt. Mathewson, and Dr. Bowen; together with Moses Brown, who had come up at the eleventh hour though absent from the preliminary session in the tavern. All these freemen and their hundred sailors began the long march without

delay, grim and a trifle apprehensive as they left the Muddy Dock behind and mounted the gentle rise of Broad Street toward the Pawtuxet Road. Just beyond Elder Snow's church some of the men turned back to take a parting look at Providence lying outspread under the early spring stars. Steeples and gables rose dark and shapely, and salt breezes swept up gently from the cove north of the Bridge. Vega was climbing above the great hill across the water, whose crest of trees was broken by the roof-line of the unfinished College edifice. At the foot of that hill, and along the narrow mounting lanes of its side, the old town dreamed; Old Providence, for whose safety and sanity so monstrous and colossal a blasphemy was about to be wiped out.

An hour and a quarter later the raiders arrived, as previously agreed, at the Fenner farmhouse; where they heard a final report on their intended victim. He had reached his farm over half an hour before, and the strange light had soon afterward shot once into the sky, but there were no lights in any visible windows. This was always the case of late. Even as this news was given another great glare arose toward the south, and the party realised that they had indeed come close to the scene of awesome and unnatural wonders. Capt. Whipple now ordered his force to separate into three divisions; one of twenty men under Eleazar Smith to strike across to the shore and guard the

landing-place against possible reinforcements for Curwen until summoned by a messenger for desperate service, a second of twenty men under Capt. Esek Hopkins to steal down into the river valley behind the Curwen farm and demolish with axes or gunpowder the oaken door in the high, steep bank, and the third to close in on the house and adjacent buildings themselves. Of this division one third was to be led by Capt. Mathewson to the cryptical stone edifice with high narrow windows, another third to follow Capt. Whipple himself to the main farmhouse, and the remaining third to preserve a circle around the whole group of buildings until summoned by a final emergency signal.

The river party would break down the hillside door at the sound of a single whistle-blast, then waiting and capturing anything which might issue from the regions within. At the sound of two whistle-blasts it would advance through the aperture to oppose the enemy or join the rest of the raiding contingent. The party at the stone building would accept these respective signals in an analogous manner; forcing an entrance at the first, and at the second descending whatever passage into the ground might be discovered, and joining the general or focal warfare expected to take place within the caverns. A third or emergency signal of three blasts would summon the immediate reserve from its general guard duty;

its twenty men dividing equally and entering the unknown depths through both farmhouse and stone building. Capt. Whipple's belief in the existence of catacombs was absolute, and he took no alternative into consideration when making his plans. He had with him a whistle of great power and shrillness, and did not fear any upsetting or misunderstanding of signals. The final reserve at the landing, of course, was nearly out of the whistle's range; hence would require a special messenger if needed for help. Moses Brown and John Carter went with Capt. Hopkins to the river-bank, while President Manning was detailed with Capt. Mathewson to the stone building. Dr. Bowen, with Ezra Weeden, remained in Capt. Whipple's party which was to storm the farmhouse itself. The attack was to begin as soon as a messenger from Capt. Hopkins had joined Capt. Whipple to notify him of the river party's readiness. The leader would then deliver the loud single blast, and the various advance parties would commence their simultaneous attack on three points. Shortly before 1 a.m. the three divisions left the Fenner farmhouse; one to guard the landing, another to seek the river valley and the hillside door, and the third to subdivide and attend to the actual buildings of the Curwen farm.

Eleazar Smith, who accompanied the shore-guarding party, records in his diary an uneventful march and a long wait on the bluff

by the bay; broken once by what seemed to be the distant sound of the signal whistle and again by a peculiar muffled blend of roaring and crying and a powder blast which seemed to come from the same direction. Later on one man thought he caught some distant gunshots, and still later Smith himself felt the throb of titanic and thunderous words resounding in upper air. It was just before dawn that a single haggard messenger with wild eyes and a hideous unknown odour about his clothing appeared and told the detachment to disperse quietly to their homes and never again think or speak of the night's doings or of him who had been Joseph Curwen. Something about the bearing of the messenger carried a conviction which his mere words could never have conveyed; for though he was a seaman well known to many of them, there was something obscurely lost or gained in his soul which set him for evermore apart. It was the same later on when they met other old companions who had gone into that zone of horror. Most of them had lost or gained something imponderable and indescribable. They had seen or heard or felt something which was not for human creatures, and could not forget it. From them there was never any gossip, for to even the commonest of mortal instincts there are terrible boundaries. And from that single messenger the party at the shore caught a nameless awe which almost sealed their

own lips. Very few are the rumours which ever came from any of them, and Eleazar Smith's diary is the only written record which has survived from that whole expedition which set forth from the Sign of the Golden Lion under the stars.

Charles Ward, however, discovered another vague sidelight in some Fenner correspondence which he found in New London, where he knew another branch of the family had lived. It seems that the Fenners, from whose house the doomed farm was distantly visible, had watched the departing columns of raiders; and had heard very clearly the angry barking of the Curwen dogs, followed by the first shrill blast which precipitated the attack. This blast had been followed by a repetition of the great shaft of light from the stone building, and in another moment, after a quick sounding of the second signal ordering a general invasion, there had come a subdued prattle of musketry followed by a horrible roaring cry which the correspondent Luke Fenner had represented in his epistle by the characters "Waaaahrrrrr-R'waaahrrr." This cry, however, had possessed a quality which no mere writing could convey, and the correspondent mentions that his mother fainted completely at the sound. It was later repeated less loudly, and further but more muffled evidences of gunfire ensued; together with a loud explosion of powder from the direction of the river. About an hour afterward all the dogs began

to bark frightfully, and there were vague ground rumblings so marked that the candlesticks tottered on the mantelpiece. A strong smell of sulphur was noted; and Luke Fenner's father declared that he heard the third or emergency whistle signal, though the others failed to detect it. Muffled musketry sounded again, followed by a deep scream less piercing but even more horrible than those which had preceded it; a kind of throaty, nastily plastic cough or gurgle whose quality as a scream must have come more from its continuity and psychological import than from its actual acoustic value.

Then the flaming thing burst into sight at a point where the Curwen farm ought to lie, and the human cries of desperate and frightened men were heard. Muskets flashed and cracked, and the flaming thing fell to the ground. A second flaming thing appeared, and a shriek of human origin was plainly distinguished. Fenner wrote that he could even gather a few words belched in frenzy: "Almighty, protect thy lamb!" Then there were more shots, and the second flaming thing fell. After that came silence for about three-quarters of an hour; at the end of which time little Arthur Fenner, Luke's brother, exclaimed that he saw "a red fog" going up to the stars from the accursed farm in the distance. No one but the child can testify to this, but Luke admits the significant coincidence implied by the panic of almost convulsive fright which at

the same moment arched the backs and stiffened the fur of the three cats then within the room.

Five minutes later a chill wind blew up, and the air became suffused with such an intolerable stench that only the strong freshness of the sea could have prevented its being noticed by the shore party or by any wakeful souls in Pawtuxet village. This stench was nothing which any of the Fenners had ever encountered before, and produced a kind of clutching, amorphous fear beyond that of the tomb or the charnel-house. Close upon it came the awful voice which no hapless hearer will ever be able to forget. It thundered out of the sky like a doom, and windows rattled as its echoes died away. It was deep and musical; powerful as a bass organ, but evil as the forbidden books of the Arabs. What it said no man can tell, for it spoke in an unknown tongue, but this is the writing Luke Fenner set down to portray the daemoniac intonations:

"DEESMEES— JESHET—
BONEDOSEFEDUVEMA—
ENTTEMOSS."

Not till the year 1919 did any soul link this crude transcript with anything else in mortal knowledge, but Charles Ward paled as he recognised what Mirandola had denounced in shudders as the ultimate horror among black magic's incantations.

An unmistakably human shout or deep chorused scream seemed to

answer this malign wonder from the Curwen farm, after which the unknown stench grew complex with an added odour equally intolerable. A wailing distinctly different from the scream now burst out, and was protracted ululantly in rising and falling paroxysms. At times it became almost articulate, though no auditor could trace any definite words; and at one point it seemed to verge toward the confines of diabolic and hysterical laughter. Then a yell of utter, ultimate fright and stark madness wrenched from scores of human throats—a yell which came strong and clear despite the depth from which it must have burst; after which darkness and silence ruled all things. Spirals of acrid smoke ascended to blot out the stars, though no flames appeared and no buildings were observed to be gone or injured on the following day.

Toward dawn two frightened messengers with monstrous and unplaceable odours saturating their clothing knocked at the Fenner door and requested a keg of rum, for which they paid very well indeed. One of them told the family that the affair of Joseph Curwen was over, and that the events of the night were not to be mentioned again. Arrogant as the order seemed, the aspect of him who gave it took away all resentment and lent it a fearsome authority; so that only these furtive letters of Luke Fenner, which he urged his Connecticut relative to destroy, remain to tell what was seen and

heard. The non-compliance of that relative, whereby the letters were saved after all, has alone kept the matter from a merciful oblivion. Charles Ward had one detail to add as a result of a long canvass of Pawtuxet residents for ancestral traditions. Old Charles Slocum of that village said that there was known to his grandfather a queer rumour concerning a charred, distorted body found in the fields a week after the death of Joseph Curwen was announced. What kept the talk alive was the notion that this body, so far as could be seen in its burnt and twisted condition, was neither thoroughly human nor wholly allied to any animal which Pawtuxet folk had ever seen or read about.

VI.

Not one man who participated in that terrible raid could ever be induced to say a word concerning it, and every fragment of the vague data which survives comes from those outside the final fighting party. There is something frightful in the care with which these actual raiders destroyed each scrap which bore the least allusion to the matter. Eight sailors had been killed, but although their bodies were not produced their families were satisfied with the statement that a clash with customs officers had occurred. The same statement also covered

the numerous cases of wounds, all of which were extensively bandaged and treated only by Dr. Jabez Bowen, who had accompanied the party. Hardest to explain was the nameless odour clinging to all the raiders, a thing which was discussed for weeks. Of the citizen leaders, Capt. Whipple and Moses Brown were most severely hurt, and letters of their wives testify the bewilderment which their reticence and close guarding of their bandages produced. Psychologically every participant was aged, sobered, and shaken. It is fortunate that they were all strong men of action and simple, orthodox religionists, for with more subtle introspectiveness and mental complexity they would have fared ill indeed. President Manning was the most disturbed; but even he outgrew the darkest shadow, and smothered memories in prayers. Every man of those leaders had a stirring part to play in later years, and it is perhaps fortunate that this is so. Little more than a twelvemonth afterward Capt. Whipple led the mob who burnt the revenue ship Gaspee, and in this bold act we may trace one step in the blotting out of unwholesome images.

There was delivered to the widow of Joseph Curwen a sealed leaden coffin of curious design, obviously found ready on the spot when needed, in which she was told her husband's body lay. He had, it was explained, been killed in a customs

battle about which it was not politic to give details. More than this no tongue ever uttered of Joseph Curwen's end, and Charles Ward had only a single hint wherewith to construct a theory. This hint was the merest thread—a shaky underscoring of a passage in Jedediah Orne's confiscated letter to Curwen, as partly copied in Ezra Weeden's handwriting. The copy was found in the possession of Smith's descendants; and we are left to decide whether Weeden gave it to his companion after the end, as a mute clue to the abnormality which had occurred, or whether, as is more probable, Smith had it before, and added the underscoring himself from what he had managed to extract from his friend by shrewd guessing and adroit cross-questioning. The underlined passage is merely this:

*I say to you againe, doe not call up
Any that you can not put downe; by the
which I meane, Any that can in turn
call up somewhat against you, whereby
your powerfulllest Devices may not be
of use. Ask of the Lesser, lest the Greater
shall not wish to Answer, and shall
commande more than you.*

In the light of this passage, and reflecting on what last unmentionable allies a beaten man might try to summon in his direst extremity, Charles Ward may well have wondered whether any citizen of Providence killed Joseph Curwen.

The deliberate effacement of

every memory of the dead man from Providence life and annals was vastly aided by the influence of the raiding leaders. They had not at first meant to be so thorough, and had allowed the widow and her father and child to remain in ignorance of the true conditions; but Capt. Tillinghast was an astute man, and soon uncovered enough rumours to whet his horror and cause him to demand that his daughter and granddaughter change their name, burn the library and all remaining papers, and chisel the inscription from the slate slab above Joseph Curwen's grave. He knew Capt. Whipple well, and probably extracted more hints from that bluff mariner than anyone else ever gained respecting the end of the accursed sorcerer.

From that time on the obliteration of Curwen's memory became increasingly rigid, extending at last by common consent even to the town records and files of the Gazette. It can be compared in spirit only to the hush that lay on Oscar Wilde's name for a decade after his disgrace, and in extent only to the fate of that sinful King of Runazar in Lord Dunsany's tale, whom the Gods decided must not only cease to be, but must cease ever to have been.

Mrs. Tillinghast, as the widow became known after 1772, sold the house in Olney Court and resided with her father in Power's Lane till her death in 1817. The farm at Pawtuxet, shunned by every living soul, remained to moulder through

the years; and seemed to decay with unaccountable rapidity. By 1780 only the stone and brickwork were standing, and by 1800 even these had fallen to shapeless heaps. None ventured to pierce the tangled shrubbery on the river-bank behind which the hillside door may have lain, nor did any try to frame a definite image of the scenes amidst which Joseph Curwen departed from the horrors he had wrought.

Only robust old Capt. Whipple was heard by alert listeners to mutter once in a while to himself, "Pox on that —, but he had no business to laugh while he screamed." 'Twas as though the damn'd — had some'at up his sleeve. For half a crown I'd burn his — house."

Part Three:

A SEARCH AND AN EVOCATION.

I.

Charles Ward, as we have seen, first learned in 1918 of his descent from Joseph Curwen. That he at once took an intense interest in everything pertaining to the bygone mystery is not to be wondered at; for every vague rumour that he had heard of Curwen now became something vital to himself, in whom flowed Curwen's blood. No spirited and imaginative genealogist could have done otherwise than begin

forthwith an avid and systematic collection of Curwen data.

In his first delvings there was not the slightest attempt at secrecy; so that even Dr. Lyman hesitates to date the youth's madness from any period before the close of 1919. He talked freely with his family—though his mother was not particularly pleased to own an ancestor like Curwen—and with the officials of the various museums and libraries he visited. In applying to private families for records thought to be in their possession he made no concealment of his object, and shared the somewhat amused scepticism with which the accounts of the old diarists and letter-writers were regarded. He often expressed a keen wonder as to what really had taken place a century and a half before at that Pawtuxet farmhouse whose site he vainly tried to find, and what Joseph Curwen really had been.

When he came across the Smith diary and archives and encountered the letter from Jedediah Orne he decided to visit Salem and look up Curwen's early activities and connexions there, which he did during the Easter vacation of 1919. At the Essex Institute, which was well known to him from former sojourns in the glamorous old town of crumbling Puritan gables and clustered gambrel roofs, he was very kindly received, and unearthed there a considerable amount of Curwen data. He found that his ancestor was born in Salem-Village, now Danvers, seven miles

from town, on the eighteenth of February (O.S.) 1662-3; and that he had run away to sea at the age of fifteen, not appearing again for nine years, when he returned with the speech, dress, and manners of a native Englishman and settled in Salem proper. At that time he had little to do with his family, but spent most of his hours with the curious books he had brought from Europe, and the strange chemicals which came for him on ships from England, France, and Holland. Certain trips of his into the country were the objects of much local inquisitiveness, and were whisperingly associated with vague rumours of fires on the hills at night.

Curwen's only close friends had been one Edward Hutchinson of Salem-Village and one Simon Orne of Salem. With these men he was often seen in conference about the Common, and visits among them were by no means infrequent. Hutchinson had a house well out toward the woods, and it was not altogether liked by sensitive people because of the sounds heard there at night. He was said to entertain strange visitors, and the lights seen from his windows were not always of the same colour. The knowledge he displayed concerning long-dead persons and long-forgotten events was considered distinctly unwholesome, and he disappeared about the time the witchcraft panic began, never to be heard from again. At that time Joseph Curwen also departed,

but his settlement in Providence was soon learned of. Simon Orne lived in Salem until 1720, when his failure to grow visibly old began to excite attention. He thereafter disappeared, though thirty years later his precise counterpart and self-styled son turned up to claim his property. The claim was allowed on the strength of documents in Simon Orne's known hand, and Jedediah Orne continued to dwell in Salem till 1771, when certain letters from Providence citizens to the Rev. Thomas Barnard and others brought about his quiet removal to parts unknown.

Certain documents by and about all of these strange characters were available at the Essex Institute, the Court House, and the Registry of Deeds, and included both harmless commonplaces such as land titles and bills of sale, and furtive fragments of a more provocative nature. There were four or five unmistakable allusions to them on the witchcraft trial records; as when one Hepzibah Lawson swore on July 10, 1692, at the Court of Oyer and Terminen under Judge Hathorne, that "fortie Witches and the Blacke Man were wont to meete in the Woodes behind Mr. Hutchinson's house," and one Amity How declared at a session of August 8th before Judge Gedney that "Mr. G. B. (Rev. George Burroughs) on that Nighte putt ye Divell his Marke upon Bridget S., Jonathan A., Simon O., Deliverance W., Joseph C., Susan P., Mehitable

C., and Deborah B." Then there was a catalogue of Hutchinson's uncanny library as found after his disappearance, and an unfinished manuscript in his handwriting, couched in a cipher none could read. Ward had a photostatic copy of this manuscript made, and began to work casually on the cipher as soon as it was delivered to him. After the following August his labours on the cipher became intense and feverish, and there is reason to believe from his speech and conduct that he hit upon the key before October or November. He never stated, though, whether or not he had succeeded.

But of greatest immediate interest was the Orne material. It took Ward only a short time to prove from identity of penmanship a thing he had already considered established from the text of the letter to Curwen; namely, that Simon Orne and his supposed son were one and the same person. As Orne had said to his correspondent, it was hardly safe to live too long in Salem, hence he resorted to a thirty-year sojourn abroad, and did not return to claim his lands except as a representative of a new generation. Orne had apparently been careful to destroy most of his correspondence, but the citizens who took action in 1771 found and preserved a few letters and papers which excited their wonder. There were cryptic formulae and diagrams in his and other hands which Ward now either copied with care or had photographed, and one

extremely mysterious letter in a chirography that the searcher recognised from items in the Registry of Deeds as positively Joseph Curwen's.

This Curwen letter, though undated as to the year, was evidently not the one in answer to which Orne had written the confiscated missive; and from internal evidence Ward placed it not much later than 1750. It may not be amiss to give the text in full, as a sample of the style of one whose history was so dark and terrible. The recipient is addressed as "Simon," but a line (whether drawn by Curwen or Orne Ward could not tell) is run through the word.

Providence, 1 May

Brother:-

My honoured Antient friende, due Respects and earnest Wishes to Him whom we serve for yr eternall Power. I am just come upon that which you ought to knowe, concern'g the matter of the Laste Extremitie and what to doe regard' yt. I am not dispos'd to followe you in go'g Away on acct. of my yeares, for Providence hath not ye Sharpeness of ye Bay in hunt'g oute uncommon Things and bringinge to Tryall. I am ty'd up in Shippes and Goodes, and could not doe as you did, besides the whiche myfarme at Patuxet hath under it That you knowe, that would not waite for my com'g Backe as an Other.

But I am not unreadie for harde ffortunes, as I haue tolde you, and haue longe work'd upon ye Way of get'g Backe

after ye Laste. I laste Night stricke on ye Wordes that bringe up YOGGE-SOTHOTHE, and sawe for ye firste Time that fface spoke of by Ibn Schacabao in ye ———. And IT said, that ye III Psalme in ye Liber-Damnatus holdes ye Clavicle. With Sunne in V House, Saturne in Trine, drawe ye Pentagram of Fire, and saye ye ninth Verse thrice. This Verse repeate eache Roodemas and Hallow's Eve; and ye Thing will breede in ye Outside Spheres.

And of ye Seede of Olde shal One be borne who shal looke Backe, tho' know'g not what he seekes.

Yett will this availe Nothing if there be no Heir, and if the Saltes, or the Way to make the Saltes bee not Readie for his Hands. And here I will owne, I have not taken needed Stepps nor found Much. Ye Process is plaguety harde to come neare, and it uses up such a Store of Specimens, I am harde putte to it to get Enough, notwithstanding the Sailors I have from the Indies. Ye People aboute are become curious, but I can stande them off. Ye gentry are worse than the Populace, be'g more Circumstantiall in their Accts. and more believ'd in what they tell. That Parson and Mr. Merritt have talk'd some, I am fearfull, but no Thing soe far is Dangerous. Ye Chymical substances are easie of get'g, there be'g II. goode Chymists in Towne, Dr. Bowen and Sam Carew. I am foll'g oute what Borellus saith, and have Helpe in Abdool Al-Hazred his VII. Booke. Whatever I gette, you shal have. And in ye meane while, do not neglect to make use of ye Wordes I have here

given. I have them Righte, but if you Desire to see HIM, imploy the Writinge on ye Piece of——, that I am putt'g in this Packet. Saye ye Verses every Roodemas and Hallow's Eve; and if yr Line runn not out, one shall bee in yeares to come that shal looke backe and use what Saltes or Stuff for Saltes you shal leave him. Job XIV. XIV.

Irejoice you are again at Salem, and hope I may see you not longe hence. I have a goode Stallion, and am think'g of get'g a Coach, there be'g one (Mr. Merritt's) in Providence already, tho' ye Roades are bad. If you are dispos'd to travel, doe not pass me bye. From Boston take ye Poste Rd. thro' Dedham, Wrentham, and Attleborough, goode Taverns be'g at all these Townes. Stop at Mr. Bolcom's in Wrentham, where ye Beddes are finer than Mr. Hatch's, but eate at ye other House for their cooke is better. Turne into Providence by Patucket falls, and ye Rd. past Mr. Sayles's Tavern. My House opp. Mr. Epenetus Olney's Tavern off ye Towne Street, 1st on ye N. side of Olney's Court. Distance from Boston Store abt. XLIV miles.

Sir, I am yr olde and true ffriend and Servt. in Almonsin-Metraton.

JOSEPHUS C.

*To Mr. Simon Orne,
William's-Lane, in Salem.*

This letter, oddly enough, was what first gave Ward the exact location of Curwen's Providence home; for none of the records encountered up to that time had been at all

specific. The discovery was doubly striking because it indicated as the newer Curwen house, built in 1761 on the site of the old, a dilapidated building still standing in Olney Court and well known to Ward in his antiquarian rambles over Stampers' Hill. The place was indeed only a few squares from his own home on the great hill's higher ground, and was now the abode of a negro family much esteemed for occasional washing, housecleaning, and furnace-tending services. To find, in distant Salem, such sudden proof of the significance of this familiar rookery in his own family history, was a highly impressive thing to Ward; and he resolved to explore the place immediately upon his return. The more mystical phases of the letter, which he took to be some extravagant kind of symbolism, frankly baffled him; though he noted with a thrill of curiosity that the Biblical passage referred to—Job 14:14—was the familiar verse, "If a man die, shall he live again? All the days of my appointed time will I wait, till my change come."

II.

Y oung Ward came home in a state of pleasant excitement, and spent the following Saturday in a long and exhaustive study of the house in Olney Court. The place, now crumbling with age, had never been a mansion; but was a modest

two-and-a-half story wooden town house of the familiar Providence colonial type, with plain peaked roof, large central chimney, and artistically carved doorway with rayed fanlight, triangular pediment, and trim Doric pilasters. It had suffered but little alteration externally, and Ward felt he was gazing on something very close to the sinister matters of his quest.

The present negro inhabitants were known to him, and he was very courteously shewn about the interior by old Asa and his stout wife Hannah. Here there was more change than the outside indicated, and Ward saw with regret that fully half of the fine scroll-and-urn overmantels and shell-carved cupboard linings were gone, whilst much of the fine wainscotting and bolection moulding was marked, hacked, and gouged, or covered up altogether with cheap wall-paper. In general, the survey did not yield as much as Ward had somehow expected; but it was at least exciting to stand within the ancestral walls which had housed such a man of horror as Joseph Curwen. He saw with a thrill that a monogram had been very carefully effaced from the ancient brass knocker.

From then until after the close of school Ward spent his time on the photostatic copy of the Hutchinson cipher and the accumulation of local Curwen data. The former still proved unyielding; but of the latter he obtained so much,

and so many clues to similar data elsewhere, that he was ready by July to make a trip to New London and New York to consult old letters whose presence in those places was indicated. This trip was very fruitful, for it brought him the Fenner letters with their terrible description of the Pawtuxet farmhouse raid, and the Nightingale-Talbot letters in which he learned of the portrait painted on a panel of the Curwen library. This matter of the portrait interested him particularly, since he would have given much to know just what Joseph Curwen looked like; and he decided to make a second search of the house in Olney Court to see if there might not be some trace of the ancient features beneath peeling coats of later paint or layers of mouldy wall-paper.

Early in August that search took place, and Ward went carefully over the walls of every room sizeable enough to have been by any possibility the library of the evil builder. He paid especial attention to the large panels of such overmantels as still remained; and was keenly excited after about an hour, when on a broad area above the fireplace in a spacious ground-floor room he became certain that the surface brought out by the peeling of several coats of paint was sensibly darker than any ordinary interior paint or the wood beneath it was likely to have been. A few more careful tests with a thin knife, and he knew that he had come upon an oil portrait of

great extent. With truly scholarly restraint the youth did not risk the damage which an immediate attempt to uncover the hidden picture with the knife might have done, but just retired from the scene of his discovery to enlist expert help. In three days he returned with an artist of long experience, Mr. Walter C. Dwight, whose studio is near the foot of College Hill; and that accomplished restorer of paintings set to work at once with proper methods and chemical substances. Old Asa and his wife were duly excited over their strange visitors, and were properly reimbursed for this invasion of their domestic hearth.

As day by day the work of restoration progressed, Charles Ward looked on with growing interest at the lines and shades gradually unveiled after their long oblivion. Dwight had begun at the bottom; hence since the picture was a three-quarter-length one, the face did not come out for some time. It was meanwhile seen that the subject was a spare, well-shaped man with dark-blue coat, embroidered waistcoat, black satin small-clothes, and white silk stockings, seated in a carved chair against the background of a window with wharves and ships beyond. When the head came out it was observed to bear a neat Albemarle wig, and to possess a thin, calm, undistinguished face which seemed somehow familiar to both Ward and the artist. Only at the very last, though, did the restorer and his

client begin to gasp with astonishment at the details of that lean, pallid visage, and to recognise with a touch of awe the dramatic trick which heredity had played. For it took the final bath of oil and the final stroke of the delicate scraper to bring out fully the expression which centuries had hidden; and to confront the bewildered Charles Dexter Ward, dweller in the past, with his own living features in the countenance of his horrible great-great- great-grandfather.

Ward brought his parents to see the marvel he had uncovered, and his father at once determined to purchase the picture despite its execution on stationary panelling. The resemblance to the boy, despite an appearance of rather greater age, was marvellous; and it could be seen that through some trick of atavism the physical contours of Joseph Curwen had found precise duplication after a century and a half. Mrs. Ward's resemblance to her ancestor was not at all marked, though she could recall relatives who had some of the facial characteristics shared by her son and by the bygone Curwen. She did not relish the discovery, and told her husband that he had better burn the picture instead of bringing it home. There was, she averred, something unwholesome about it; not only intrinsically, but in its very resemblance to Charles. Mr. Ward, however, was a practical man of power and affairs—a cotton

manufacturer with extensive mills at Riverpoint in the Pawtuxet Valley—and not one to listen to feminine scruples. The picture impressed him mightily with its likeness to his son, and he believed the boy deserved it as a present. In this opinion, it is needless to say, Charles most heartily concurred; and a few days later Mr. Ward located the owner of the house—a small rodent-featured person with a guttural accent—and obtained the whole mantel and overmantel bearing the picture at a curtly fixed price which cut short the impending torrent of unctuous haggling.

It now remained to take off the panelling and remove it to the Ward home, where provisions were made for its thorough restoration and installation with an electric mock-fireplace in Charles's third-floor study or library. To Charles was left the task of superintending this removal, and on the twenty-eighth of August he accompanied two expert workmen from the Crooker decorating firm to the house in Olney Court, where the mantel and portrait-bearing overmantel were detached with great care and precision for transportation in the company's motor truck. There was left a space of exposed brickwork marking the chimney's course, and in this young Ward observed a cubical recess about a foot square, which must have lain directly behind the head of the portrait. Curious as to what such a space might mean or

contain, the youth approached and looked within; finding beneath the deep coatings of dust and soot some loose yellowed papers, a crude, thick copybook, and a few mouldering textile shreds which may have formed the ribbon binding the rest together. Blowing away the bulk of the dirt and cinders, he took up the book and looked at the bold inscription on its cover. It was in a hand which he had learned to recognise at the Essex Institute, and proclaimed the volume as the "Journall and Notes of Jos: Curwen, Gent., of Providence-Plantations, Late of Salem."

Excited beyond measure by his discovery, Ward shewed the book to the two curious workmen beside him. Their testimony is absolute as to the nature and genuineness of the finding, and Dr. Willett relies on them to help establish his theory that the youth was not mad when he began his major eccentricities. All the other papers were likewise in Curwen's handwriting, and one of them seemed especially portentous because of its inscription: "To Him Who Shal Come After, & How He May Gett Beyond Time & ye Spheres." Another was in a cipher; the same, Ward hoped, as the Hutchinson cipher which had hitherto baffled him. A third, and here the searcher rejoiced, seemed to be a key to the cipher; whilst the fourth and fifth were addressed respectively to "Edw. Hutchinson, Armiger" and "Jedediah Orne, esq.," "or Their Heir

or Heirs, or Those Represent'g Them." The sixth and last was inscribed: "Joseph Curwen his Life and Travells Bet'n ye yeares 1678 and 1687: Of Whither He Voyag'd, Where He Stay'd, Whom He Sawe, and What He Learnt."

III.

WE have now reached the point from which the more academic school of alienists date Charles Ward's madness. Upon his discovery the youth had looked immediately at a few of the inner pages of the book and manuscripts, and had evidently seen something which impressed him tremendously. Indeed, in shewing the titles to the workmen, he appeared to guard the text itself with peculiar care, and to labour under a perturbation for which even the antiquarian and genealogical significance of the find could hardly account. Upon returning home he broke the news with an almost embarrassed air, as if he wished to convey an idea of its supreme importance without having to exhibit the evidence itself. He did not even shew the titles to his parents, but simply told them that he had found some documents in Joseph Curwen's handwriting, "mostly in cipher," which would have to be studied very carefully before yielding up their true meaning. It is unlikely that he would have shewn what he

did to the workmen, had it not been for their unconcealed curiosity. As it was he doubtless wished to avoid any display of peculiar reticence which would increase their discussion of the matter.

That night Charles Ward sat up in his room reading the new-found book and papers, and when day came he did not desist. His meals, on his urgent request when his mother called to see what was amiss, were sent up to him; and in the afternoon he appeared only briefly when the men came to install the Curwen picture and mantelpiece in his study. The next night he slept in snatches in his clothes, meanwhile wrestling feverishly with the unravelling of the cipher manuscript. In the morning his mother saw that he was at work on the photostatic copy of the Hutchinson cipher, which he had frequently shewn her before; but in response to her query he said that the Curwen key could not be applied to it. That afternoon he abandoned his work and watched the men fascinatedly as they finished their installation of the picture with its woodwork above a cleverly realistic electric log, setting the mock-fireplace and overmantel a little out from the north wall as if a chimney existed, and boxing in the sides with panelling to match the room's. The front panel holding the picture was sawn and hinged to allow cupboard space behind it. After the workmen went he moved his work into the study and sat down before it with

his eyes half on the cipher and half on the portrait which stared back at him like a year-adding and century-recalling mirror.

His parents, subsequently recalling his conduct at this period, give interesting details anent the policy of concealment which he practiced. Before servants he seldom hid any paper which he might be studying, since he rightly assumed that Curwen's intricate and archaic chirography would be too much for them. With his parents, however, he was more circumspect; and unless the manuscript in question were a cipher, or a mere mass of cryptic symbols and unknown ideographs (as that entitled "To Him Who Shal Come After, etc." seemed to be), he would cover it with some convenient paper until his caller had departed. At night he kept the papers under lock and key in an antique cabinet of his, where he also placed them whenever he left the room. He soon resumed fairly regular hours and habits, except that his long walks and other outside interests seemed to cease. The opening of school, where he now began his senior year, seemed a great bore to him; and he frequently asserted his determination never to bother with college. He had, he said, important special investigations to make, which would provide him with more avenues toward knowledge and the humanities than any university which the world could boast.

Naturally, only one who had

always been more or less studious, eccentric, and solitary could have pursued this course for many days without attracting notice. Ward, however, was constitutionally a scholar and a hermit; hence his parents were less surprised than regretful at the close confinement and secrecy he adopted. At the same time, both his father and mother thought it odd that he would shew them no scrap of his treasure-trove, nor give any connected account of such data as he had deciphered. This reticence he explained away as due to a wish to wait until he might announce some connected revelation, but as the weeks passed without further disclosures there began to grow up between the youth and his family a kind of constraint; intensified in his mother's case by her manifest disapproval of all Curwen delvings.

During October Ward began visiting the libraries again, but no longer for the antiquarian matter of his former days. Witchcraft and magic, occultism and daemonology, were what he sought now; and when Providence sources proved unfruitful he would take the train for Boston and tap the wealth of the great library in Copley Square, the Widener Library at Harvard, or the Zion Research Library in Brookline, where certain rare works on Biblical subjects are available. He bought extensively, and fitted up a whole additional set of shelves in his study for newly acquired works on uncanny

subjects; while during the Christmas holidays he made a round of out-of-town trips including one to Salem to consult certain records at the Essex Institute.

About the middle of January, 1920, there entered Ward's bearing an element of triumph which he did not explain, and he was no more found at work upon the Hutchinson cipher. Instead, he inaugurated a dual policy of chemical research and record-scanning; fitting up for the one a laboratory in the unused attic of the house, and for the latter haunting all the sources of vital statistics in Providence. Local dealers in drugs and scientific supplies, later questioned, gave astonishingly queer and meaningless catalogues of the substances and instruments he purchased; but clerks at the State House, the City Hall, and the various libraries agree as to the definite object of his second interest. He was searching intensely and feverishly for the grave of Joseph Curwen, from whose slate slab an older generation had so wisely blotted the name.

Little by little there grew upon the Ward family the conviction that something was wrong. Charles had had freaks and changes of minor interests before, but this growing secrecy and absorption in strange pursuits was unlike even him. His school work was the merest pretence; and although he failed in no test, it could be seen that the old application had all vanished. He had other concerns now; and when not

in his new laboratory with a score of obsolete alchemical books, could be found either poring over old burial records down town or glued to his volumes of occult lore in his study, where the startlingly—one almost fancied increasingly—similar features of Joseph Curwen stared blandly at him from the great overmantel on the north wall.

Late in March Ward added to his archive-searching a ghoulis series of rambles about the various ancient cemeteries of the city. The cause appeared later, when it was learned from City Hall clerks that he had probably found an important clue. His quest had suddenly shifted from the grave of Joseph Curwen to that of one Naphthali Field; and this shift was explained when, upon going over the files that he had been over, the investigators actually found a fragmentary record of Curwen's burial which had escaped the general obliteration, and which stated that the curious leaden coffin had been interred "10 ft. S. and 5 ft. W. of Naphthali Field's grave in y——." The lack of a specified burying-ground in the surviving entry greatly complicated the search, and Naphthali Field's grave seemed as elusive as that of Curwen; but here no systematic effacement had existed, and one might reasonably be expected to stumble on the stone itself even if its record had perished. Hence the rambles—from which St. John's (the former King's) Churchyard and the ancient

Congregational burying-ground in the midst of Swan Point Cemetery were excluded, since other statistics had shewn that the only Naphthali Field (obit 1729) whose grave could have been meant had been a Baptist.

IV.

It was toward May when Dr. Willett, at the request of the senior Ward, and fortified with all the Curwen data which the family had gleaned from Charles in his non-secretive days, talked with the young man. The interview was of little value or conclusiveness, for Willett felt at every moment that Charles was thoroughly master of himself and in touch with matters of real importance; but it at least forced the secretive youth to offer some rational explanation of his recent demeanour. Of a pallid, impassive type not easily shewing embarrassment, Ward seemed quite ready to discuss his pursuits, though not to reveal their object. He stated that the papers of his ancestor had contained some remarkable secrets of early scientific knowledge, for the most part in cipher, of an apparent scope comparable only to the discoveries of Friar Bacon and perhaps surpassing even those. They were, however, meaningless except when correlated with a body of learning now wholly obsolete; so that their immediate presentation to a world equipped only with modern science

would rob them of all impressiveness and dramatic significance. To take their vivid place in the history of human thought they must first be correlated by one familiar with the background out of which they evolved, and to this task of correlation Ward was now devoting himself. He was seeking to acquire as fast as possible those neglected arts of old which a true interpreter of the Curwen data must possess, and hoped in time to make a full announcement and presentation of the utmost interest to mankind and to the world of thought. Not even Einstein, he declared, could more profoundly revolutionise the current conception of things.

As to his graveyard search, whose object he freely admitted, but the details of whose progress he did not relate, he said he had reason to think that Joseph Curwen's mutilated headstone bore certain mystic symbols—carved from directions in his will and ignorantly spared by those who had effaced the name—which were absolutely essential to the final solution of his cryptic system. Curwen, he believed, had wished to guard his secret with care; and had consequently distributed the data in an exceedingly curious fashion. When Dr. Willett asked to see the mystic documents, Ward displayed much reluctance and tried to put him off with such things as photostatic copies of the Hutchinson cipher and Orne formulae and diagrams; but finally shewed him

the exteriors of some of the real Curwen finds—the “Journall and Notes,” the cipher (title in cipher also), and the formula-filled message “To Him Who Shal Come After”—and let him glance inside such as were in obscure characters.

He also opened the diary at a page carefully selected for its innocuousness and gave Willett a glimpse of Curwen’s connected handwriting in English. The doctor noted very closely the crabbed and complicated letters, and the general aura of the seventeenth century which clung round both penmanship and style despite the writer’s survival into the eighteenth century, and became quickly certain that the document was genuine. The text itself was relatively trivial, and Willett recalled only a fragment:

Wedn. 16 Octr. 1754. My Sloop the Wakeful this Day putt in from London with XX newe Men pick’d up in ye Indies, Spaniards from Martinico and 2 Dutch Men from Surinam. Ye Dutch Men are like to Desert from have’g hearde Somewhat ill of these Ventures, but I will see to ye Inducing of them to Staye. ffor Mr. Knight Dexter of ye Bay and Book 120 Pieces Camblets, 100 Pieces Assrtd. Cambleteens, 20 Pieces blue Duffles, 100 Pieces Shalloons, 50 Pieces Calamancoes, 300 Pieces each, Shendsoy and Humhums. ffor Mr. Green at ye Elephant 50 Gallon Cytles, 20 Warm’g Pannes, 15 Bake Cytles, 10 pr. Smoke’g Tonges. ffor Mr. Perrigo 1 Sett of Awles.

ffor Mr. Nightingale 50 Reames prime Foolsap. Say’d ye SABAOTH thrice last Nighte but None appear’d. I must heare more from Mr. H. in Transylvania, tho’ it is Harde reach’g him and exceeding strange he can not give me the Use of what he hath so well us’d these hundred yeares. Simon hath not Writ these V. Weekes, but I expecte soon hear’g from him.

When upon reaching this point Dr. Willett turned the leaf he was quickly checked by Ward, who almost snatched the book from his grasp. All that the doctor had a chance to see on the newly opened page was a brief pair of sentences; but these, strangely enough, lingered tenaciously in his memory. They ran:

Ye Verse from Liber-Damnatus be’g spoke V Roodmasses and IV Hallows-Eves, I am Hopeful ye Thing is breed’g Outside ye Spheres. It will drawe One who is to Come, if I can make sure he shal bee, and he shall think on Past thinges and looke back thro’ all ye yeares, against ye which I must have ready ye Saltes or That to make ’em with.

Willett saw no more, but somehow this small glimpse gave a new and vague terror to the painted features of Joseph Curwen which stared blandly down from the overmantel. Ever after that he entertained the odd fancy—which his medical skill of course assured him was only a fancy—that the eyes of the portrait had a sort of wish, if not

an actual tendency, to follow young Charles Ward as he moved about the room. He stopped before leaving to study the picture closely, marveling at its resemblance to Charles and memorising every minute detail of the cryptical, colourless face, even down to a slight scar or pit in the smooth brow above the right eye. Cosmo Alexander, he decided, was a painter worthy of the Scotland that produced Raeburn, and a teacher worthy of his illustrious pupil Gilbert Stuart.

Assured by the doctor that Charles’s mental health was in no danger, but that on the other hand he was engaged in researches which might prove of real importance, the Wards were more lenient than they might otherwise have been when during the following June the youth made positive his refusal to attend college. He had, he declared, studies of much more vital importance to pursue; and intimated a wish to go abroad the following year in order to avail himself of certain sources of data not existing in America. The senior Ward, while denying this latter wish as absurd for a boy of only eighteen, acquiesced regarding the university; so that after a none too brilliant graduation from the Moses Brown School there ensued for Charles a three-year period of intensive occult study and graveyard searching. He became recognised as an eccentric, and dropped even more completely from the sight of his family’s friends than he had been

before; keeping close to his work and only occasionally making trips to other cities to consult obscure records. Once he went south to talk with a strange old mulatto who dwelt in a swamp and about whom a newspaper had printed a curious article. Again he sought a small village in the Adirondacks whence reports of certain odd ceremonial practices had come. But still his parents forbade him the trip to the Old World which he desired.

Coming of age in April, 1923, and having previously inherited a small competence from his maternal grandfather, Ward determined at last to take the European trip hitherto denied him. Of his proposed itinerary he would say nothing save that the needs of his studies would carry him to many places, but he promised to write his parents fully and faithfully. When they saw he could not be dissuaded, they ceased all opposition and helped as best they could; so that in June the young man sailed for Liverpool with the farewell blessings of his father and mother, who accompanied him to Boston and waved him out of sight from the White Star pier in Charlestown. Letters soon told of his safe arrival, and of his securing good quarters in Great Russell Street, London; where he proposed to stay, shunning all family friends, till he had exhausted the resources of the British Museum in a certain direction. Of his daily life he wrote but little, for there was little to write. Study and experiment

consumed all his time, and he mentioned a laboratory which he had established in one of his rooms. That he said nothing of antiquarian rambles in the glamorous old city with its luring skyline of ancient domes and steeples and its tangles of roads and alleys whose mystic convolutions and sudden vistas alternately beckon and surprise, was taken by his parents as a good index of the degree to which his new interests had engrossed his mind.

In June, 1924, a brief note told of his departure for Paris, to which he had before made one or two flying trips for material in the Bibliothèque Nationale. For three months thereafter he sent only postal cards, giving an address in the Rue St. Jacques and referring to a special search among rare manuscripts in the library of an unnamed private collector. He avoided acquaintances, and no tourists brought back reports of having seen him. Then came a silence, and in October the Wards received a picture card from Prague, Czecho-Slovakia, stating that Charles was in that ancient town for the purpose of conferring with a certain very aged man supposed to be the last living possessor of some very curious mediaeval information. He gave an address in the Neustadt, and announced no move till the following January; when he dropped several cards from Vienna telling of his passage through that city on the way toward a more easterly region whither one of his correspondents

and fellow-delvers into the occult had invited him.

The next card was from Klausenburg in Transylvania, and told of Ward's progress toward his destination. He was going to visit a Baron Ferenczy, whose estate lay in the mountains east of Rakus; and was to be addressed at Rakus in the care of that nobleman. Another card from Rakus a week later, saying that his host's carriage had met him and that he was leaving the village for the mountains, was his last message for a considerable time; indeed, he did not reply to his parents' frequent letters until May, when he wrote to discourage the plan of his mother for a meeting in London, Paris, or Rome during the summer, when the elder Wards were planning to travel in Europe. His researches, he said, were such that he could not leave his present quarters; while the situation of Baron Ferenczy's castle did not favour visits. It was on a crag in the dark wooded mountains, and the region was so shunned by the country folk that normal people could not help feeling ill at ease. Moreover, the Baron was not a person likely to appeal to correct and conservative New England gentlefolk. His aspect and manners had idiosyncrasies, and his age was so great as to be disquieting. It would be better, Charles said, if his parents would wait for his return to Providence; which could scarcely be far distant.

That return did not, however, take place until May 1926, when

after a few heralding cards the young wanderer quietly slipped into New York on the *Homeric* and traversed the long miles to Providence by motor-coach, eagerly drinking in the green rolling hills, the fragrant, blossoming orchards, and the white steepled towns of vernal Connecticut; his first taste of ancient New England in nearly four years. When the coach crossed the Pawcatuck and entered Rhode Island amidst the faery goldenness of a late spring afternoon his heart beat with quickened force, and the entry to Providence along Reservoir and Elmwood avenues was a breathless and wonderful thing despite the depths of forbidden lore to which he had delved. At the high square where Broad, Weybosset, and Empire Streets join, he saw before and below him in the fire of sunset the pleasant, remembered houses and domes and steeples of the old town; and his head swam curiously as the vehicle rolled down to the terminal behind the Biltmore, bringing into view the great dome and soft, roof-pierced greenery of the ancient hill across the river, and the tall colonial spire of the First Baptist Church limned pink in the magic evening light against the fresh springtime verdure of its precipitous background.

Old Providence! It was this place and the mysterious forces of its long, continuous history which had brought him into being, and which had drawn him back toward marvels

and secrets whose boundaries no prophet might fix. Here lay the arcana, wondrous or dreadful as the case might be, for which all his years of travel and application had been preparing him. A taxicab whirled him through Post Office Square with its glimpse of the river, the old Market House, and the head of the bay, and up the steep curved slope of Waterman Street to Prospect, where the vast gleaming dome and sunset-flushed Ionic columns of the Christian Science Church beckoned northward. Then eight squares past the fine old estates his childish eyes had known, and the quaint brick sidewalks so often trodden by his youthful feet. And at last the little white overtaken farmhouse on the right, on the left the classic Adam porch and stately bayed facade of the great brick house where he was born. It was twilight, and Charles Dexter Ward had come home.

V.

A school of alienists slightly less academic than Dr. Lyman's assign to Ward's European trip the beginning of his true madness. Admitting that he was sane when he started, they believe that his conduct upon returning implies a disastrous change. But even to this claim Dr. Willett refuses to accede. There was, he insists, something later; and the queerinesses of the youth at this stage he attributes to the practice

of rituals learned abroad—odd enough things, to be sure, but by no means implying mental aberration on the part of their celebrant. Ward himself, though visibly aged and hardened, was still normal in his general reactions; and in several talks with Willett displayed a balance which no madman—even an incipient one—could feign continuously for long. What elicited the notion of insanity at this period were the sounds heard at all hours from Ward's attic laboratory, in which he kept himself most of the time. There were chantings and repetitions, and thunderous declamations in uncanny rhythms; and although these sounds were always in Ward's own voice, there was something in the quality of that voice, and in the accents of the formulae it pronounced, which could not but chill the blood of every hearer. It was noticed that Nig, the venerable and beloved black cat of the household, bristled and arched his back perceptibly when certain of the tones were heard.

The odours occasionally wafted from the laboratory were likewise exceedingly strange. Sometimes they were very noxious, but more often they were aromatic, with a haunting, elusive quality which seemed to have the power of inducing fantastic images. People who smelled them had a tendency to glimpse momentary mirages of enormous vistas, with strange hills or endless avenues of

sphinxes and hippogriffs stretching off into infinite distance.

Ward did not resume his old-time rambles, but applied himself diligently to the strange books he had brought home, and to equally strange delvings within his quarters; explaining that European sources had greatly enlarged the possibilities of his work, and promising great revelations in the years to come. His older aspect increased to a startling degree his resemblance to the Curwen portrait in his library; and Dr. Willett would often pause by the latter after a call, marvelling at the virtual identity, and reflecting that only the small pit above the picture's right eye now remained to differentiate the long-dead wizard from the living youth. These calls of Willett's, undertaken at the request of the senior Wards, were curious affairs. Ward at no time repulsed the doctor, but the latter saw that he could never reach the young man's inner psychology. Frequently he noted peculiar things about; little wax images of grotesque design on the shelves or tables, and the half-erased remnants of circles, triangles, and pentagrams in chalk or charcoal on the cleared central space of the large room. And always in the night those rhythms and incantations thundered, till it became very difficult to keep servants or suppress furtive talk of Charles's madness.

In January, 1927, a peculiar incident occurred. One night about midnight, as Charles was chanting

a ritual whose weird cadence echoed unpleasantly through the house below, there came a sudden gust of chill wind from the bay, and a faint, obscure trembling of the earth which everyone in the neighbourhood noted. At the same time the cat exhibited phenomenal traces of fright, while dogs bayed for as much as a mile around. This was the prelude to a sharp thunderstorm, anomalous for the season, which brought with it such a crash that Mr. and Mrs. Ward believed the house had been struck. They rushed upstairs to see what damage had been done, but Charles met them at the door to the attic; pale, resolute, and portentous, with an almost fearsome combination of triumph and seriousness on his face. He assured them that the house had not really been struck, and that the storm would soon be over. They paused, and looking through a window saw that he was indeed right; for the lightning flashed farther and farther off, whilst the trees ceased to bend in the strange frigid gust from the water. The thunder sank to a sort of dull mumbling chuckle and finally died away. Stars came out, and the stamp of triumph on Charles Ward's face crystallised into a very singular expression.

For two months or more after this incident Ward was less confined than usual to his laboratory. He exhibited a curious interest in the weather, and made odd inquiries about the date of the spring thawing

of the ground. One night late in March he left the house after midnight, and did not return till almost morning; when his mother, being wakeful, heard a rumbling motor draw up to the carriage entrance. Muffled oaths could be distinguished, and Mrs. Ward, rising and going to the window, saw four dark figures removing a long, heavy box from a truck at Charles's direction and carrying it within by the side door. She heard laboured breathing and ponderous footfalls on the stairs, and finally a dull thumping in the attic; after which the footfalls descended again, and the four men reappeared outside and drove off in their truck.

The next day Charles resumed his strict attic seclusion, drawing down the dark shades of his laboratory windows and appearing to be working on some metal substance. He would open the door to no one, and steadfastly refused all proffered food. About noon a wrenching sound followed by a terrible cry and a fall were heard, but when Mrs. Ward rapped at the door her son at length answered faintly, and told her that nothing had gone amiss. The hideous and indescribable stench now welling out was absolutely harmless and unfortunately necessary. Solitude was the one prime essential, and he would appear later for dinner. That afternoon, after the conclusion of some odd hissing sounds which came from behind the locked portal, he did finally appear;

wearing an extremely haggard aspect and forbidding anyone to enter the laboratory upon any pretext. This, indeed, proved the beginning of a new policy of secrecy; for never afterward was any other person permitted to visit either the mysterious garret workroom or the adjacent storeroom which he cleaned out, furnished roughly, and added to his inviolably private domain as a sleeping apartment. Here he lived, with books brought up from his library beneath, till the time he purchased the Pawtuxet bungalow and moved to it all his scientific effects.

In the evening Charles secured the paper before the rest of the family and damaged part of it through an apparent accident. Later on Dr. Willett, having fixed the date from statements by various members of the household, looked up an intact copy at the Journal office and found that in the destroyed section the following small item had occurred:

NOCTURNAL DIGGERS SURPRISED IN NORTH BURIAL GROUND

Robert Hart, night watchman at the North Burial Ground, this morning discovered a party of several men with a motor truck in the oldest part of the cemetery, but apparently frightened them off before they had accomplished whatever their object may have been.

The discovery took place at about four o'clock, when Hart's attention was

attracted by the sound of a motor outside his shelter. Investigating, he saw a large truck on the main drive several rods away; but could not reach it before the sound of his feet on the gravel had revealed his approach. The men hastily placed a large box in the truck and drove away toward the street before they could be overtaken; and since no known grave was disturbed, Hart believes that this box was an object which they wished to bury.

The diggers must have been at work for a long while before detection, for Hart found an enormous hole dug at a considerable distance back from the roadway in the lot of Amasa Field, where most of the old stones have long ago disappeared. The hole, a place as large and deep as a grave, was empty; and did not coincide with any interment mentioned in the cemetery records.

Sergt. Riley of the Second Station viewed the spot and gave the opinion that the hole was dug by bootleggers rather gruesomely and ingeniously seeking a safe cache for liquor in a place not likely to be disturbed. In reply to questions Hart said he thought the escaping truck had headed up Rochambeau Avenue, though he could not be sure.

During the next few days Ward was seldom seen by his family. Having added sleeping quarters to his attic realm, he kept closely to himself there, ordering food brought to the door and not taking it in until after the servant had gone away. The droning of monotonous formulae

and the chanting of bizarre rhythms recurred at intervals, while at other times occasional listeners could detect the sound of tinkling glass, hissing chemicals, running water, or roaring gas flames. Odours of the most unplaceable quality, wholly unlike any before noted, hung at times around the door; and the air of tension observable in the young recluse whenever he did venture briefly forth was such as to excite the keenest speculation. Once he made a hasty trip to the Athenaeum for a book he required, and again he hired a messenger to fetch him a highly obscure volume from Boston. Suspense was written portentously over the whole situation, and both the family and Dr. Willett confessed themselves wholly at a loss what to do or think about it.

VI.

Then on the fifteenth of April a strange development occurred. While nothing appeared to grow different in kind, there was certainly a very terrible difference in degree; and Dr. Willett somehow attaches great significance to the change. The day was Good Friday, a circumstance of which the servants made much, but which others quite naturally dismiss as an irrelevant coincidence. Late in the afternoon young Ward began repeating a certain formula in a singularly loud voice, at the same time burning some

substance so pungent that its fumes escaped over the entire house. The formula was so plainly audible in the hall outside the locked door that Mrs. Ward could not help memorising it as she waited and listened anxiously, and later on she was able to write it down at Dr. Willett's request. It ran as follows, and experts have told Dr. Willett that its very close analogue can be found in the mystic writings of "Eliphas Levi," that cryptic soul who crept through a crack in the forbidden door and glimpsed the frightful vistas of the void beyond:

*Per Adonai Eloim, Adonai Jehova,
Adonai Sabaoth, Metraton On Agla
Mathon,
verbum pythonicum, mysterium
salamandrae,
conventus sylvarum, antra
gnomorum,
daemonia Coeli God, Almonsin,
Gibor, Jehosua,
Evam, Zariatnatmik, veni, veni,
veni.*

This had been going on for two hours without change or intermission when over all the neighbourhood a pandemoniac howling of dogs set in. The extent of this howling can be judged from the space it received in the papers the next day, but to those in the Ward household it was overshadowed by the odour which instantly followed it; a hideous, all-pervasive odour which none of them had ever smelt before or have

ever smelt since. In the midst of this mephitic flood there came a very perceptible flash like that of lightning, which would have been blinding and impressive but for the daylight around; and then was heard the voice that no listener can ever forget because of its thunderous remoteness, its incredible depth, and its eldritch dissimilarity to Charles Ward's voice. It shook the house, and was clearly heard by at least two neighbours above the howling of the dogs. Mrs. Ward, who had been listening in despair outside her son's locked laboratory, shivered as she recognised its hellish import; for Charles had told her of its evil fame in dark books, and of the manner in which it had thundered, according to the Fenner letters, above the doomed Pawtuxet farmhouse on the night of Joseph Curwen's annihilation. There was no mistaking that nightmare phrase, for Charles had described it too vividly in the old days when he had talked frankly of his Curwen investigations. And yet it was only this fragment of an archaic and forgotten language: "DIES MIES JESCHET BOENE DOE SEF DOUVEMA ENITEMAUS."

Close upon this thundering there came a momentary darkening of the daylight, though sunset was still an hour distant, and then a puff of added odour different from the first but equally unknown and intolerable. Charles was chanting again now and his mother could hear syllables that sounded like

"Yi-nash-Yog-Sothoth-he-lglb-fi-throdag"—ending in a "Yah!" whose maniacal force mounted in an ear-splitting crescendo. A second later all previous memories were effaced by the wailing scream which burst out with frantic explosiveness and gradually changed form to a paroxysm of diabolic and hysterical laughter. Mrs. Ward, with the mingled fear and blind courage of maternity, advanced and knocked affrightedly at the concealing panels, but obtained no sign of recognition. She knocked again, but paused nervelessly as a second shriek arose, this one unmistakably in the familiar voice of her son, and sounding concurrently with the still bursting cachinnations of that other voice. Presently she fainted, although she is still unable to recall the precise and immediate cause. Memory sometimes makes merciful deletions.

Mr. Ward returned from the business section at about quarter past six; and not finding his wife downstairs, was told by the frightened servants that she was probably watching at Charles's door, from which the sounds had been far stranger than ever before. Mounting the stairs at once, he saw Mrs. Ward stretched at full length on the floor of the corridor outside the laboratory; and realising that she had fainted, hastened to fetch a glass of water from a set bowl in a

neighbouring alcove. Dashing the cold fluid in her face, he was heartened to observe an immediate response on her part, and was watching the bewildered opening of her eyes when a chill shot through him and threatened to reduce him to the very state from which she was emerging. For the seemingly silent laboratory was not as silent as it had appeared to be, but held the murmurs of a tense, muffled conversation in tones too low for comprehension, yet of a quality profoundly disturbing to the soul.

It was not, of course, new for Charles to mutter formulae; but this muttering was definitely different. It was so palpably a dialogue, or imitation of a dialogue, with the regular alteration of inflections suggesting question and answer, statement and response. One voice was undisguisedly that of Charles, but the other had a depth and hollowness which the youth's best powers of ceremonial mimicry had scarcely approached before. There was something hideous, blasphemous, and abnormal about it, and but for a cry from his recovering wife which cleared his mind by arousing his protective instincts it is not likely that Theodore Howland Ward could have maintained for nearly a year more his old boast that he had never fainted. As it was, he seized his wife in his arms and bore her quickly downstairs before she could notice the voices which had so horribly

disturbed him. Even so, however, he was not quick enough to escape catching something himself which caused him to stagger dangerously with his burden. For Mrs. Ward's cry had evidently been heard by others than he, and there had come in response to it from behind the locked door the first distinguishable words which that masked and terrible colloquy had yielded. They were merely an excited caution in Charles's own voice, but somehow their implications held a nameless fright for the father who overheard them. The phrase was just this: "Sshh!-write!"

Mr. and Mrs. Ward conferred at some length after dinner, and the former resolved to have a firm and serious talk with Charles that very night. No matter how important the object, such conduct could no longer be permitted; for these latest developments transcended every limit of sanity and formed a menace to the order and nervous well-being of the entire household. The youth must indeed have taken complete leave of his senses, since only downright madness could have prompted the wild screams and imaginary conversations in assumed voices which the present day had brought forth. All this must be stopped, or Mrs. Ward would be made ill and the keeping of servants become an impossibility.

Mr. Ward rose at the close of the meal and started upstairs for Charles's laboratory. On the third floor, however, he paused at the

sounds which he heard proceeding from the now disused library of his son. Books were apparently being flung about and papers wildly rustled, and upon stepping to the door Mr. Ward beheld the youth within, excitedly assembling a vast armful of literary matter of every size and shape. Charles's aspect was very drawn and haggard, and he dropped his entire load with a start at the sound of his father's voice. At the elder man's command he sat down, and for some time listened to the admonitions he had so long deserved. There was no scene. At the end of the lecture he agreed that his father was right, and that his noises, mutterings, incantations, and chemical odours were indeed inexcusable nuisances. He agreed to a policy of greater quiet, though insisting on a prolongation of his extreme privacy. Much of his future work, he said, was in any case purely book research; and he could obtain quarters elsewhere for any such vocal rituals as might be necessary at a later stage. For the fright and fainting of his mother he expressed the keenest contrition, and explained that the conversation later heard was part of an elaborate symbolism designed to create a certain mental atmosphere. His use of abstruse technical terms somewhat bewildered Mr. Ward, but the parting impression was one of undeniable sanity and poise despite a mysterious tension of the utmost gravity. The interview was really quite inconclusive, and as Charles

picked up his armful and left the room Mr. Ward hardly knew what to make of the entire business. It was as mysterious as the death of poor old Nig, whose stiffening form had been found an hour before in the basement, with staring eyes and fear-distorted mouth.

Driven by some vague detective instinct, the bewildered parent now glanced curiously at the vacant shelves to see what his son had taken up to the attic. The youth's library was plainly and rigidly classified, so that one might tell at a glance the books or at least the kind of books which had been withdrawn. On this occasion Mr. Ward was astonished to find that nothing of the occult or the antiquarian, beyond what had been previously removed, was missing. These new withdrawals were all modern items; histories, scientific treatises, geographies, manuals of literature, philosophic works, and certain contemporary newspapers and magazines. It was a very curious shift from Charles Ward's recent run of reading, and the father paused in a growing vortex of perplexity and an engulfing sense of strangeness. The strangeness was a very poignant sensation, and almost clawed at his chest as he strove to see just what was wrong around him. Something was indeed wrong, and tangibly as well as spiritually so. Ever since he had been in this room he had known that something was amiss, and at last it dawned upon him what it was.

On the north wall rose still the ancient carved overmantel from the house in Olney Court, but to the cracked and precariously restored oils of the large Curwen portrait disaster had come. Time and unequal heating had done their work at last, and at some time since the room's last cleaning the worst had happened. Peeling clear of the wood, curling tighter and tighter, and finally crumbling into small bits with what must have been malignly silent suddenness, the portrait of Joseph Curwen had resigned forever its staring surveillance of the youth it so strangely resembled, and now lay scattered on the floor as a thin coating of fine bluish-grey dust.

Part Four:

A MUTATION AND A MADNESS.

I.

In the week following that memorable Good Friday Charles Ward was seen more often than usual, and was continually carrying books between his library and the attic laboratory. His actions were quiet and rational, but he had a furtive, hunted look which his mother did not like, and developed an incredibly ravenous appetite as gauged by his demands upon the cook. Dr. Willett had been told of those Friday noises and happenings, and on the following Tuesday

had a long conversation with the youth in the library where the picture stared no more. The interview was, as always, inconclusive; but Willett is still ready to swear that the youth was sane and himself at the time. He held out promises of an early revelation, and spoke of the need of securing a laboratory elsewhere. At the loss of the portrait he grieved singularly little considering his first enthusiasm over it, but seemed to find something of positive humour in its sudden crumbling.

About the second week Charles began to be absent from the house for long periods, and one day when good old black Hannah came to help with the spring cleaning she mentioned his frequent visits to the old house in Olney Court, where he would come with a large valise and perform curious delvings in the cellar. He was always very liberal to her and to old Asa, but seemed more worried than he used to be; which grieved her very much, since she had watched him grow up from birth. Another report of his doings came from Pawtuxet, where some friends of the family saw him at a distance a surprising number of times. He seemed to haunt the resort and canoe-house of Rhodes-on-the-Pawtuxet, and subsequent inquiries by Dr. Willett at that place brought out the fact that his purpose was always to secure access to the rather hedged-in river-bank, along which he would walk toward the north,

usually not reappearing for a very long while.

Late in May came a momentary revival of ritualistic sounds in the attic laboratory which brought a stern reproof from Mr. Ward and a somewhat distracted promise of amendment from Charles. It occurred one morning, and seemed to form a resumption of the imaginary conversation noted on that turbulent Good Friday. The youth was arguing or remonstrating hotly with himself, for there suddenly burst forth a perfectly distinguishable series of clashing shouts in differentiated tones like alternate demands and denials which caused Mrs. Ward to run upstairs and listen at the door. She could hear no more than a fragment whose only plain words were "must have it red for three months," and upon her knocking all sounds ceased at once. When Charles was later questioned by his father he said that there were certain conflicts of spheres of consciousness which only great skill could avoid, but which he would try to transfer to other realms.

About the middle of June a queer nocturnal incident occurred. In the early evening there had been some noise and thumping in the laboratory upstairs, and Mr. Ward was on the point of investigating when it suddenly quieted down. That midnight, after the family had retired, the butler was nightlocking the front door when according to his statement Charles appeared

somewhat blunderingly and uncertainly at the foot of the stairs with a large suitcase and made signs that he wished egress. The youth spoke no word, but the worthy Yorkshireman caught one sight of his fevered eyes and trembled causelessly. He opened the door and young Ward went out, but in the morning he presented his resignation to Mrs. Ward. There was, he said, something unholy in the glance Charles had fixed on him. It was no way for a young gentleman to look at an honest person, and he could not possibly stay another night. Mrs. Ward allowed the man to depart, but she did not value his statement highly. To fancy Charles in a savage state that night was quite ridiculous, for as long as she had remained awake she had heard faint sounds from the laboratory above; sounds as if of sobbing and pacing, and of a sighing which told only of despair's profoundest depths. Mrs. Ward had grown used to listening for sounds in the night, for the mystery of her son was fast driving all else from her mind.

The next evening, much as on another evening nearly three months before, Charles Ward seized the newspaper very early and accidentally lost the main section. The matter was not recalled till later, when Dr. Willett began checking up loose ends and searching out missing links here and there. In the Journal office he found the section which Charles had lost, and marked

two items as of possible significance. They were as follows:

MORE CEMETERY DELVING:

It was this morning discovered by Robert Hart, night watchman at the North Burial Ground, that ghouls were again at work in the ancient portion of the cemetery. The grave of Ezra Weeden, who was born in 1740 and died in 1824 according to his uprooted and savagely splintered slate headstone, was found excavated and rifled, the work being evidently done with a spade stolen from an adjacent tool-shed.

Whatever the contents may have been after more than a century of burial, all was gone except a few slivers of decayed wood. There were no wheel tracks, but the police have measured a single set of footprints which they found in the vicinity, and which indicate the boots of a man of refinement.

Hart is inclined to link this incident with the digging discovered last March, when a party in a motor truck were frightened away after making a deep excavation; but Sergt. Riley of the Second Station discounts this theory and points to vital differences in the two cases. In March the digging had been in a spot where no grave was known; but this time a well-marked and cared-for grave had been rifled with every evidence of deliberate purpose, and with a conscious malignity expressed in the splintering of the slab which had been intact up to the day before.

Members of the Weeden family, notified of the happening, expressed their astonishment and regret; and were wholly unable to think of any enemy who would care to violate the grave of their ancestor. Hazard Weeden of 598 Angell Street recalls a family legend according to which Ezra Weeden was involved in some very peculiar circumstances, not dishonourable to himself, shortly before the Revolution; but of any modern feud or mystery he is frankly ignorant. Inspector Cunningham has been assigned to the case, and hopes to uncover some valuable clues in the near future.

DOGS NOISY IN PAWTUXET:

Residents of Pawtuxet were aroused about 3 a.m. today by a phenomenal baying of dogs which seemed to centre near the river just north of Rhodes-on-the-Pawtuxet. The volume and quality of the howling were unusually odd, according to most who heard it; and Fred Lemdin, night watchman at Rhodes, declares it was mixed with something very like the shrieks of a man in mortal terror and agony. A sharp and very brief thunderstorm, which seemed to strike somewhere near the bank of the river, put an end to the disturbance. Strange and unpleasant odours, probably from the oil tanks along the bay, are popularly linked with this incident; and may have had their share in exciting the dogs.

The aspect of Charles now became very haggard and hunted,

and all agreed in retrospect that he may have wished at this period to make some statement or confession from which sheer terror withheld him. The morbid listening of his mother in the night brought out the fact that he made frequent sallies abroad under cover of darkness, and most of the more academic alienists unite at present in charging him with the revolting cases of vampirism which the press so sensationally reported about this time, but which have not yet been definitely traced to any known perpetrator. These cases, too recent and celebrated to need detailed mention, involved victims of every age and type and seemed to cluster around two distinct localities; the residential hill and the North End, near the Ward home, and the suburban districts across the Cranston line near Pawtuxet. Both late wayfarers and sleepers with open windows were attacked, and those who lived to tell the tale spoke unanimously of a lean, lithe, leaping monster with burning eyes which fastened its teeth in the throat or upper arm and feasted ravenously.

Dr. Willett, who refuses to date the madness of Charles Ward as far back as even this, is cautious in attempting to explain these horrors. He has, he declares, certain theories of his own; and limits his positive statements to a peculiar kind of negation: "I will not," he says, "state who or what I believe perpetrated these attacks and murders, but I will

declare that Charles Ward was innocent of them. I have reason to be sure he was ignorant of the taste of blood, as indeed his continued anaemic decline and increasing pallor prove better than any verbal argument. Ward meddled with terrible things, but he has paid for it, and he was never a monster or a villain. As for now—I don't like to think. A change came, and I'm content to believe that the old Charles Ward died with it. His soul did, anyhow, for that mad flesh that vanished from Waite's hospital had another."

Willett speaks with authority, for he was often at the Ward home attending Mrs. Ward, whose nerves had begun to snap under the strain. Her nocturnal listening had bred some morbid hallucinations which she confided to the doctor with hesitancy, and which he ridiculed in talking to her, although they made him ponder deeply when alone. These delusions always concerned the faint sounds which she fancied she heard in the attic laboratory and bedroom, and emphasised the occurrence of muffled sighs and sobbings at the most impossible times. Early in July Willett ordered Mrs. Ward to Atlantic City for an indefinite recuperative sojourn, and cautioned both Mr. Ward and the haggard and elusive Charles to write her only cheering letters. It is probably to this enforced and reluctant escape that she owes her life and continued sanity.

II.

Not long after his mother's departure, Charles Ward began negotiating for the Pawtuxet bungalow. It was a squalid little wooden edifice with a concrete garage, perched high on the sparsely settled bank of the river slightly above Rhodes, but for some odd reason the youth would have nothing else. He gave the real-estate agencies no peace till one of them secured it for him at an exorbitant price from a somewhat reluctant owner, and as soon as it was vacant he took possession under cover of darkness, transporting in a great closed van the entire contents of his attic laboratory, including the books both weird and modern which he had borrowed from his study. He had this van loaded in the black small hours, and his father recalls only a drowsy realisation of stifled oaths and stamping feet on the night the goods were taken away. After that Charles moved back to his own old quarters on the third floor, and never haunted the attic again.

To the Pawtuxet bungalow Charles transferred all the secrecy with which he had surrounded his attic realm, save that he now appeared to have two sharers of his mysteries; a villainous-looking Portuguese half-caste from the South Main St. waterfront who acted as a servant, and a thin, scholarly stranger with dark glasses and a stubbly full beard

of dyed aspect whose status was evidently that of a colleague. Neighbours vainly tried to engage these odd persons in conversation. The mulatto Gomes spoke very little English, and the bearded man, who gave his name as Dr. Allen, voluntarily followed his example. Ward himself tried to be more affable, but succeeded only in provoking curiosity with his rambling accounts of chemical research. Before long queer tales began to circulate regarding the all-night burning of lights; and somewhat later, after this burning had suddenly ceased, there rose still queerer tales of disproportionate orders of meat from the butcher's and of the muffled shouting, declamation, rhythmic chanting, and screaming supposed to come from some very deep cellar below the place. Most distinctly the new and strange household was bitterly disliked by the honest bourgeoisie of the vicinity, and it is not remarkable that dark hints were advanced connecting the hated establishment with the current epidemic of vampiristic attacks and murders; especially since the radius of that plague seemed now confined wholly to Pawtuxet and the adjacent streets of Edgewood.

Ward spent most of his time at the bungalow, but slept occasionally at home and was still reckoned a dweller beneath his father's roof. Twice he was absent from the city on week-long trips, whose destinations have not yet been discovered.

He grew steadily paler and more emaciated even than before, and lacked some of his former assurance when repeating to Dr. Willett his old, old story of vital research and future revelations. Willett often waylaid him at his father's house, for the elder Ward was deeply worried and perplexed, and wished his son to get as much sound oversight as could be managed in the case of so secretive and independent an adult. The doctor still insists that the youth was sane even as late as this, and adduces many a conversation to prove his point.

About September the vampirism declined, but in the following January Ward almost became involved in serious trouble. For some time the nocturnal arrival and departure of motor trucks at the Pawtuxet bungalow had been commented upon, and at this juncture an unforeseen hitch exposed the nature of at least one item of their contents. In a lonely spot near Hope Valley had occurred one of the frequent sordid waylaying of trucks by "hi-jackers" in quest of liquor shipments, but this time the robbers had been destined to receive the greater shock. For the long cases they seized proved upon opening to contain some exceedingly gruesome things; so gruesome, in fact, that the matter could not be kept quiet amongst the denizens of the underworld. The thieves had hastily buried what they discovered, but when the State Police got wind of the matter a careful search was

made. A recently arrested vagrant, under promise of immunity from prosecution on any additional charge, at last consented to guide a party of troopers to the spot; and there was found in that hasty cache a very hideous and shameful thing. It would not be well for the national—or even the international—sense of decorum if the public were ever to know what was uncovered by that awestruck party. There was no mistaking it, even by these far from studious officers; and telegrams to Washington ensued with feverish rapidity.

The cases were addressed to Charles Ward at his Pawtuxet bungalow, and State and Federal officials at once paid him a very forceful and serious call. They found him pallid and worried with his two odd companions, and received from him what seemed to be a valid explanation and evidence of innocence. He had needed certain anatomical specimens as part of a programme of research whose depth and genuineness anyone who had known him in the last decade could prove, and had ordered the required kind and number from agencies which he had thought as reasonably legitimate as such things can be. Of the identity of the specimens he had known absolutely nothing, and was properly shocked when the inspectors hinted at the monstrous effect on public sentiment and national dignity which a knowledge of the matter would produce. In this statement he

was firmly sustained by his bearded colleague Dr. Allen, whose oddly hollow voice carried even more conviction than his own nervous tones; so that in the end the officials took no action, but carefully set down the New York name and address which Ward gave them as a basis for a search which came to nothing. It is only fair to add that the specimens were quickly and quietly restored to their proper places, and that the general public will never know of their blasphemous disturbance.

On February 9, 1928, Dr. Willett received a letter from Charles Ward which he considers of extraordinary importance, and about which he has frequently quarrelled with Dr. Lyman. Lyman believes that this note contains positive proof of a well-developed case of dementia praecox, but Willett on the other hand regards it as the last perfectly sane utterance of the hapless youth. He calls especial attention to the normal character of the penmanship; which though shewing traces of shattered nerves, is nevertheless distinctly Ward's own. The text in full is as follows:

100 Prospect St.

Providence, R.I.,

February 8, 1928.

Dear Dr. Willett:—

I feel that at last the time has come for me to make the disclosures which I have so long promised you, and for which you have pressed me so often. The

patience you have shewn in waiting, and the confidence you have shewn in my mind and integrity, are things I shall never cease to appreciate.

And now that I am ready to speak, I must own with humiliation that no triumph such as I dreamed of can ever be mine. Instead of triumph I have found terror, and my talk with you will not be a boast of victory but a plea for help and advice in saving both myself and the world from a horror beyond all human conception or calculation. You recall what those Fenner letters said of the old raiding party at Pawtuxet. That must all be done again, and quickly. Upon us depends more than can be put into words—all civilisation, all natural law, perhaps even the fate of the solar system and the universe. I have brought to light a monstrous abnormality, but I did it for the sake of knowledge. Now for the sake of all life and Nature you must help me thrust it back into the dark again.

I have left that Pawtuxet place forever, and we must extirpate everything existing there, alive or dead. I shall not go there again, and you must not believe it if you ever hear that I am there. I will tell you why I say this when I see you. I have come home for good, and wish you would call on me at the very first moment that you can spare five or six hours continuously to hear what I have to say. It will take that long—and believe me when I tell you that you never had a more genuine professional duty than this. My life and reason are the very least things which hang in the balance.

I dare not tell my father, for he could not grasp the whole thing. But I have told him of my danger, and he has four men from a detective agency watching the house. I don't know how much good they can do, for they have against them forces which even you could scarcely envisage or acknowledge. So come quickly if you wish to see me alive and hear how you may help to save the cosmos from stark hell.

Any time will do—I shall not be out of the house. Don't telephone ahead, for there is no telling who or what may try to intercept you. And let us pray to whatever gods there be that nothing may prevent this meeting.

In utmost gravity and desperation,

CHARLES DEXTER WARD.

P.S. Shoot Dr. Allen on sight and dissolve his body in acid. Don't burn it.

Dr. Willett received this note about 10:30 a.m., and immediately arranged to spare the whole late afternoon and evening for the momentous talk, letting it extend on into the night as long as might be necessary. He planned to arrive about four o'clock, and through all the intervening hours was so engulfed in every sort of wild speculation that most of his tasks were very mechanically performed. Maniacal as the letter would have sounded to a stranger, Willett had seen too much of Charles Ward's oddities to dismiss it as sheer raving. That something very subtle, ancient,

and horrible was hovering about he felt quite sure, and the reference to Dr. Allen could almost be comprehended in view of what Pawtuxet gossip said of Ward's enigmatical colleague. Willett had never seen the man, but had heard much of his aspect and bearing, and could not but wonder what sort of eyes those much-discussed dark glasses might conceal.

Promptly at four Dr. Willett presented himself at the Ward residence, but found to his annoyance that Charles had not adhered to his determination to remain indoors. The guards were there, but said that the young man seemed to have lost part of his timidity. He had that morning done much apparently frightened arguing and protesting over the telephone, one of the detectives said, replying to some unknown voice with phrases such as "I am very tired and must rest a while," "I can't receive anyone for some time," "you'll have to excuse me," "Please postpone decisive action till we can arrange some sort of compromise," or "I am very sorry, but I must take a complete vacation from everything; I'll talk with you later." Then, apparently gaining boldness through meditation, he had slipped out so quietly that no one had seen him depart or knew that he had gone until he returned about one o'clock and entered the house without a word. He had gone upstairs, where a bit of his fear must have surged back; for he was heard to cry out in a

highly terrified fashion upon entering his library, afterward trailing off into a kind of choking gasp. When, however, the butler had gone to inquire what the trouble was, he had appeared at the door with a great show of boldness, and had silently gestured the man away in a manner that terrified him unaccountably. Then he had evidently done some rearranging of his shelves, for a great clattering and thumping and creaking ensued; after which he had reappeared and left at once. Willett inquired whether or not any message had been left, but was told that there was none. The butler seemed queerly disturbed about something in Charles's appearance and manner, and asked solicitously if there was much hope for a cure of his disordered nerves.

For almost two hours Dr. Willett waited vainly in Charles Ward's library, watching the dusty shelves with their wide gaps where books had been removed, and smiling grimly at the panelled overmantel on the north wall, whence a year before the suave features of old Joseph Curwen had looked mildly down. After a time the shadows began to gather, and the sunset cheer gave place to a vague growing terror which flew shadow-like before the night. Mr. Ward finally arrived, and shewed much surprise and anger at his son's absence after all the pains which had been taken to guard him. He had not known of Charles's appointment, and promised to notify

Willett when the youth returned. In bidding the doctor goodnight he expressed his utter perplexity at his son's condition, and urged his caller to do all he could to restore the boy to normal poise. Willett was glad to escape from that library, for something frightful and unholy seemed to haunt it; as if the vanished picture had left behind a legacy of evil. He had never liked that picture; and even now, strong-nerved though he was, there lurked a quality in its vacant panel which made him feel an urgent need to get out into the pure air as soon as possible.

III.

The next morning Willett received a message from the senior Ward, saying that Charles was still absent. Mr. Ward mentioned that Dr. Allen had telephoned him to say that Charles would remain at Pawtuxet for some time, and that he must not be disturbed. This was necessary because Allen himself was suddenly called away for an indefinite period, leaving the researches in need of Charles's constant oversight. Charles sent his best wishes, and regretted any bother his abrupt change of plans might have caused. In listening to this message Mr. Ward heard Dr. Allen's voice for the first time, and it seemed to excite some vague and elusive memory which could not be actually placed, but which was

disturbing to the point of fearfulness.

Faced by these baffling and contradictory reports, Dr. Willett was frankly at a loss what to do. The frantic earnestness of Charles's note was not to be denied, yet what could one think of its writer's immediate violation of his own expressed policy? Young Ward had written that his delvings had become blasphemous and menacing, that they and his bearded colleague must be extirpated at any cost, and that he himself would never return to their final scene; yet according to latest advices he had forgotten all this and was back in the thick of the mystery. Common sense bade one leave the youth alone with his freakishness, yet some deeper instinct would not permit the impression of that frenzied letter to subside. Willett read it over again, and could not make its essence sound as empty and insane as both its bombastic verbiage and its lack of fulfilment would seem to imply. Its terror was too profound and real, and in conjunction with what the doctor already knew evoked too vivid hints of monstrosities from beyond time and space to permit of any cynical explanation. There were nameless horrors abroad; and no matter how little one might be able to get at them, one ought to stand prepared for any sort of action at any time.

For over a week Dr. Willett pondered on the dilemma which seemed thrust upon him, and became

more and more inclined to pay Charles a call at the Pawtuxet bungalow. No friend of the youth had ever ventured to storm this forbidden retreat, and even his father knew of its interior only from such descriptions as he chose to give; but Willett felt that some direct conversation with his patient was necessary. Mr. Ward had been receiving brief and non-committal typed notes from his son, and said that Mrs. Ward in her Atlantic City retirement had had no better word. So at length the doctor resolved to act; and despite a curious sensation inspired by old legends of Joseph Curwen, and by more recent revelations and warnings from Charles Ward, set boldly out for the bungalow on the bluff above the river.

Willett had visited the spot before through sheer curiosity, though of course never entering the house or proclaiming his presence; hence knew exactly the route to take. Driving out Broad Street one early afternoon toward the end of February in his small motor, he thought oddly of the grim party which had taken that selfsame road a hundred and fifty-seven years before on a terrible errand which none might ever comprehend.

The ride through the city's decaying fringe was short, and trim Edgewood and sleepy Pawtuxet presently spread out ahead. Willett turned to the right down Lockwood Street and drove his car as far along that rural road as he could, then

alighted and walked north to where the bluff towered above the lovely bends of the river and the sweep of misty downlands beyond. Houses were still few here, and there was no mistaking the isolated bungalow with its concrete garage on a high point of land at his left. Stepping briskly up the neglected gravel walk he rapped at the door with a firm hand, and spoke without a tremor to the evil Portuguese mulatto who opened it to the width of a crack.

He must, he said, see Charles Ward at once on vitally important business. No excuse would be accepted, and a repulse would mean only a full report of the matter to the elder Ward. The mulatto still hesitated, and pushed against the door when Willett attempted to open it; but the doctor merely raised his voice and renewed his demands. Then there came from the dark interior a husky whisper which somehow chilled the hearer through and through though he did not know why he feared it. "Let him in, Tony," it said, "we may as well talk now as ever." But disturbing as was the whisper, the greater fear was that which immediately followed. The floor creaked and the speaker hove in sight—and the owner of those strange and resonant tones was seen to be no other than Charles Dexter Ward.

The minuteness with which Dr. Willett recalled and recorded his conversation of that afternoon is due to the importance he assigns to this

particular period. For at last he concedes a vital change in Charles Dexter Ward's mentality, and believes that the youth now spoke from a brain hopelessly alien to the brain whose growth he had watched for six and twenty years. Controversy with Dr. Lyman has compelled him to be very specific, and he definitely dates the madness of Charles Ward from the time the typewritten notes began to reach his parents. Those notes are not in Ward's normal style; not even in the style of that last frantic letter to Willett. Instead, they are strange and archaic, as if the snapping of the writer's mind had released a flood of tendencies and impressions picked up unconsciously through boyhood antiquarianism. There is an obvious effort to be modern, but the spirit and occasionally the language are those of the past.

The past, too, was evident in Ward's every tone and gesture as he received the doctor in that shadowy bungalow. He bowed, motioned Willett to a seat, and began to speak abruptly in that strange whisper which he sought to explain at the very outset.

"I am grown phthisical," he began, "from this cursed river air. You must excuse my speech. I suppose you are come from my father to see what ails me, and I hope you will say nothing to alarm him."

Willett was studying these scraping tones with extreme care, but studying even more closely the

face of the speaker. Something, he felt, was wrong; and he thought of what the family had told him about the fright of that Yorkshire butler one night. He wished it were not so dark, but did not request that any blind be opened. Instead, he merely asked Ward why he had so belied the frantic note of little more than a week before.

"I was coming to that," the host replied. "You must know, I am in a very bad state of nerves, and do and say queer things I cannot account for. As I have told you often, I am on the edge of great matters; and the bigness of them has a way of making me light-headed. Any man might well be frightened of what I have found, but I am not to be put off for long. I was a dunce to have that guard and stick at home; for having gone this far, my place is here. I am not well spoke of by my prying neighbours, and perhaps I was led by weakness to believe myself what they say of me. There is no evil to any in what I do, so long as I do it rightly. Have the goodness to wait six months, and I'll shew you what will pay your patience well."

"You may as well know I have a way of learning old matters from things surer than books, and I'll leave you to judge the importance of what I can give to history, philosophy, and the arts by reason of the doors I have access to. My ancestor had all this when those witless peeping Toms came and murdered him. I now have it again, or am coming very

imperfectly to have a part of it. This time nothing must happen, and least of all through any idiot fears of my own. Pray forget all I writ you, Sir, and have no fear of this place or any in it. Dr. Allen is a man of fine parts, and I owe him an apology for anything ill I have said of him. I wish I had no need to spare him, but there were things he had to do elsewhere. His zeal is equal to mine in all those matters, and I suppose that when I feared the work I feared him too as my greatest helper in it."

Ward paused, and the doctor hardly knew what to say or think. He felt almost foolish in the face of this calm repudiation of the letter; and yet there clung to him the fact that while the present discourse was strange and alien and indubitably mad, the note itself had been tragic in its naturalness and likeness to the Charles Ward he knew. Willett now tried to turn the talk on early matters, and recall to the youth some past events which would restore a familiar mood; but in this process he obtained only the most grotesque results. It was the same with all the alienists later on. Important sections of Charles Ward's store of mental images, mainly those touching modern times and his own personal life, had been unaccountably expunged; whilst all the massed antiquarianism of his youth had welled up from some profound subconsciousness to engulf the contemporary and the individual. The youth's intimate knowledge of elder things

was abnormal and unholy, and he tried his best to hide it. When Willett would mention some favourite object of his boyhood archaistic studies he often shed by pure accident such a light as no normal mortal could conceivably be expected to possess, and the doctor shuddered as the glib allusion glided by.

It was not wholesome to know so much about the way the fat sheriff's wig fell off as he leaned over at the play in Mr. Douglass's Histrionick Academy in King Street on the eleventh of February, 1762, which fell on a Thursday; or about how the actors cut the text of Steele's "Conscious Lover" so badly that one was almost glad the Baptist-ridden legislature closed the theatre a fortnight later. That Thomas Sabin's Boston coach was "damnd uncomfortable" old letters may well have told; but what healthy antiquarian could recall how the creaking of Epenetus Olney's new signboard (the gaudy crown he set up after he took to calling his tavern the Crown Coffee House) was exactly like the first few notes of the new jazz piece all the radios in Pawtuxet were playing?

Ward, however, would not be quizzed long in this vein. Modern and personal topics he waved aside quite summarily, whilst regarding antique affairs he soon shewed the plainest boredom. What he wished clearly enough was only to satisfy his visitor enough to make him depart without the intention of

returning. To this end he offered to shew Willett the entire house, and at once proceeded to lead the doctor through every room from cellar to attic. Willett looked sharply, but noted that the visible books were far too few and trivial ever to have filled the wide gaps on Ward's shelves at home, and that the meagre so-called "laboratory" was the flimsiest sort of a blind. Clearly, there were a library and a laboratory elsewhere; but just where, it was impossible to say.

Essentially defeated in his quest for something he could not name, Willett returned to town before evening and told the senior Ward everything which had occurred. They agreed that the youth must be definitely out of his mind, but decided that nothing drastic need be done just then. Above all, Mrs. Ward must be kept in as complete an ignorance as her son's own strange typed notes would permit.

Mr. Ward now determined to call in person upon his son, making it wholly a surprise visit. Dr. Willett took him in his car one evening, guiding him to within sight of the bungalow and waiting patiently for his return. The session was a long one, and the father emerged in a very saddened and perplexed state. His reception had developed much like Willett's, save that Charles had been an excessively long time in appearing after the visitor had forced his way into the hall and sent the Portuguese away with an imperative demand; and in the bearing of the altered son

there was no trace of filial affection. The lights had been dim, yet even so the youth had complained that they dazzled him outrageously. He had not spoken out loud at all, averring that his throat was in very poor condition; but in his hoarse whisper there was a quality so vaguely disturbing that Mr. Ward could not banish it from his mind.

Now definitely leagued together to do all they could toward the youth's mental salvation, Mr. Ward and Dr. Willett set about collecting every scrap of data which the case might afford. Pawtuxet gossip was the first item they studied, and this was relatively easy to glean since both had friends in that region. Dr. Willett obtained the most rumours because people talked more frankly to him than to a parent of the central figure, and from all he heard he could tell that young Ward's life had become indeed a strange one. Common tongues would not dissociate his household from the vampirism of the previous summer, while the nocturnal comings and goings of the motor trucks provided their share of dark speculation. Local tradesmen spoke of the queerness of the orders brought them by the evil-looking mulatto, and in particular of the inordinate amounts of meat and fresh blood secured from the two butcher shops in the immediate neighbourhood. For a household of only three, these quantities were quite absurd.

Then there was the matter of

the sounds beneath the earth. Reports of these things were harder to pin down, but all the vague hints tallied in certain basic essentials. Noises of a ritual nature positively existed, and at times when the bungalow was dark. They might, of course, have come from the known cellar; but rumour insisted that there were deeper and more spreading crypts. Recalling the ancient tales of Joseph Curwen's catacombs, and assuming for granted that the present bungalow had been selected because of its situation on the old Curwen site as revealed in one or another of the documents found behind the picture, Willett and Mr. Ward gave this phase of the gossip much attention; and searched many times without success for the door in the river-bank which old manuscripts mentioned. As to popular opinions of the bungalow's various inhabitants, it was soon plain that the Brava Portuguese was loathed, the bearded and spectacled Dr. Allen feared, and the pallid young scholar disliked to a profound extent. During the last week or two Ward had obviously changed much, abandoning his attempts at affability and speaking only in hoarse but oddly repellent whispers on the few occasions that he ventured forth.

Such were the shreds and fragments gathered here and there; and over these Mr. Ward and Dr. Willett held many long and serious conferences. They strove to exercise deduction, induction, and constructive

imagination to their utmost extent; and to correlate every known fact of Charles's later life, including the frantic letter which the doctor now shewed the father, with the meagre documentary evidence available concerning old Joseph Curwen. They would have given much for a glimpse of the papers Charles had found, for very clearly the key to the youth's madness lay in what he had learned of the ancient wizard and his doings.

IV.

And yet, after all, it was from no step of Mr. Ward's or Dr. Willett's that the next move in this singular case proceeded. The father and the physician, rebuffed and confused by a shadow too shapeless and intangible to combat, had rested uneasily on their oars while the typed notes of young Ward to his parents grew fewer and fewer. Then came the first of the month with its customary financial adjustments, and the clerks at certain banks began a peculiar shaking of heads and telephoning from one to the other. Officials who knew Charles Ward by sight went down to the bungalow to ask why every cheque of his appearing at this juncture was a clumsy forgery, and were reassured less than they ought to have been when the youth hoarsely explained that his hand had lately been so much affected by a nervous

shock as to make normal writing impossible. He could, he said, form no written characters at all except with great difficulty; and could prove it by the fact that he had been forced to type all his recent letters, even those to his father and mother, who would bear out the assertion.

What made the investigators pause in confusion was not this circumstance alone, for that was nothing unprecedented or fundamentally suspicious, nor even the Pawtuxet gossip, of which one or two of them had caught echoes. It was the muddled discourse of the young man which nonplussed them, implying as it did a virtually total loss of memory concerning important monetary matters which he had had at his fingertips only a month or two before. Something was wrong; for despite the apparent coherence and rationality of his speech, there could be no normal reason for this ill-concealed blankness on vital points. Moreover, although none of these men knew Ward well, they could not help observing the change in his language and manner. They had heard he was an antiquarian, but even the most hopeless antiquarians do not make daily use of obsolete phraseology and gestures. Altogether, this combination of hoarseness, palsied hands, bad memory, and altered speech and bearing must represent some disturbance or malady of genuine gravity, which no doubt formed the basis of

the prevailing odd rumours; and after their departure the party of officials decided that a talk with the senior Ward was imperative.

So on the sixth of March, 1928, there was a long and serious conference in Mr. Ward's office, after which the utterly bewildered father summoned Dr. Willett in a kind of helpless resignation. Willett looked over the strained and awkward signatures of the cheques, and compared them in his mind with the penmanship of that last frantic note. Certainly, the change was radical and profound, and yet there was something damnably familiar about the new writing. It had crabbed and archaic tendencies of a very curious sort, and seemed to result from a type of stroke utterly different from that which the youth had always used. It was strange—but where had he seen it before? On the whole, it was obvious that Charles was insane. Of that there could be no doubt. And since it appeared unlikely that he could handle his property or continue to deal with the outside world much longer, something must quickly be done toward his oversight and possible cure. It was then that the alienists were called in, Drs. Peck and Waite of Providence and Dr. Lyman of Boston, to whom Mr. Ward and Dr. Willett gave the most exhaustive possible history of the case, and who conferred at length in the now unused library of their young patient, examining what books and papers of his were left in

order to gain some further notion of his habitual mental cast. After scanning this material and examining the ominous note to Willett they all agreed that Charles Ward's studies had been enough to unseat or at least to warp any ordinary intellect, and wished most heartily that they could see his more intimate volumes and documents; but this latter they knew they could do, if at all, only after a scene at the bungalow itself. Willett now reviewed the whole case with febrile energy; it being at this time that he obtained the statements of the workmen who had seen Charles find the Curwen documents, and that he collated the incidents of the destroyed newspaper items, looking up the latter at the Journal office.

On Thursday, the eighth of March, Drs. Willett, Peck, Lyman, and Waite, accompanied by Mr. Ward, paid the youth their momentous call; making no concealment of their object and questioning the now acknowledged patient with extreme minuteness. Charles, though he was inordinately long in answering the summons and was still redolent of strange and noxious laboratory odours when he did finally make his agitated appearance, proved a far from recalcitrant subject; and admitted freely that his memory and balance had suffered somewhat from close application to abstruse studies. He offered no resistance when his removal to other quarters was insisted upon; and seemed, indeed, to display a high degree of

intelligence as apart from mere memory. His conduct would have sent his interviewers away in bafflement had not the persistently archaic trend of his speech and unmistakable replacement of modern by ancient ideas in his consciousness marked him out as one definitely removed from the normal. Of his work he would say no more to the group of doctors than he had formerly said to his family and to Dr. Willett, and his frantic note of the previous month he dismissed as mere nerves and hysteria. He insisted that this shadowy bungalow possessed no library or laboratory beyond the visible ones, and waxed abstruse in explaining the absence from the house of such odours as now saturated all his clothing. Neighbourhood gossip he attributed to nothing more than the cheap inventiveness of baffled curiosity. Of the whereabouts of Dr. Allen he said he did not feel at liberty to speak definitely, but assured his inquisitors that the bearded and spectacled man would return when needed. In paying off the stolid Brava who resisted all questioning by the visitors, and in closing the bungalow which still seemed to hold such nighted secrets, Ward shewed no sign of nervousness save a barely noticed tendency to pause as though listening for something very faint. He was apparently animated by a calmly philosophic resignation, as if his removal were the merest transient incident which would cause the least trouble if

facilitated and disposed of once and for all. It was clear that he trusted to his obviously unimpaired keenness of absolute mentality to overcome all the embarrassments into which his twisted memory, his lost voice and handwriting, and his secretive and eccentric behaviour had led him. His mother, it was agreed, was not to be told of the change; his father supplying typed notes in his name. Ward was taken to the restfully and picturesquely situated private hospital maintained by Dr. Waite on Conanicut Island in the bay, and subjected to the closest scrutiny and questioning by all the physicians connected with the case. It was then that the physical oddities were noticed; the slackened metabolism, the altered skin, and the disproportionate neural reactions. Dr. Willett was the most perturbed of the various examiners, for he had attended Ward all his life and could appreciate with terrible keenness the extent of his physical disorganisation. Even the familiar olive mark on his hip was gone, while on his chest was a great black mole or cicatrice which had never been there before, and which made Willett wonder whether the youth had ever submitted to any of the "witch markings" reputed to be inflicted at certain unwholesome nocturnal meetings in wild and lonely places. The doctor could not keep his mind off a certain transcribed witch-trial record from Salem which Charles had shewn him in the old non-secretive days,

and which read: "Mr. G. B. on that Nighte putt ye Divell his Marke upon Bridget S., Jonathan A., Simon O., Deliverance W., Joseph C., Susan P., Mehitable C., and Deborah B." Ward's face, too, troubled him horribly, till at length he suddenly discovered why he was horrified. For above the young man's right eye was something which he had never previously noticed—a small scar or pit precisely like that in the crumbled painting of old Joseph Curwen, and perhaps attesting some hideous ritualistic inoculation to which both had submitted at a certain stage of their occult careers.

While Ward himself was puzzling all the doctors at the hospital a very strict watch was kept on all mail addressed either to him or to Dr. Allen, which Mr. Ward had ordered delivered at the family home. Willett had predicted that very little would be found, since any communications of a vital nature would probably have been exchanged by messenger; but in the latter part of March there did come a letter from Prague for Dr. Allen which gave both the doctor and the father deep thought. It was in a very crabbed and archaic hand; and though clearly not the effort of a foreigner, shewed almost as singular a departure from modern English as the speech of young Ward himself. It read:

*Kleinstrasse 11, Altstadt, Prague,
11th Feby. 1928.
Brother in Almonsin-Metraton:-*

*I this day receiv'd yr mention of
what came up from the Salts I sent you.
It was wrong, and meanes clearly that
ye Headstones had been chang'd when
Barnabas gott me the Specimen. It is
often so, as you must be sensible of from
the Thing you gott from ye Kings
Chapell ground in 1769 and what H.
gott from Olde Bury'g Point in 1690,
that was like to ende him. I gott such a
Thing in Aegypt 75 yeares gone, from
the which came that Scar ye Boy saw
on me here in 1924. As I told you longe
ago, do not calle up That which you can
not put downe; either from dead Saltes
or out of ye Spheres beyond. Have ye
Wordes for laying at all times readie,
and stopp not to be sure when there is
any Doubte of Whom you have. Stones
are all chang'd now in Nine groundes
out of 10. You are never sure till you
question. I this day heard from H., who
has had Trouble with the Soldiers. He
is like to be sorry Transylvania is pass'd
from Hungary to Roumania, and would
change his Seat if the Castel weren't so
fulle of What we Knowe. But of this he
hath doubtless writ you. In my next
Send'g there will be Somewhat from a
Hill tomb from ye East that will delight
you greatly. Meanwhile forget not I am
desirous of B. F. if you can possibly get
him for me. You know G. in Philada.
better than I. Have him up firste if you
will, but doe not use him soe hard he
will be Difficult, for I must speake to
him in ye End.*

*Yogg-Sothoth Neblod Zin
SIMON O.*

To Mr. J. C. in Providence.

Mr. Ward and Dr. Willett paused in utter chaos before this apparent bit of unrelieved insanity. Only by degrees did they absorb what it seemed to imply. So the absent Dr. Allen, and not Charles Ward, had come to be the leading spirit at Pawtuxet? That must explain the wild reference and denunciation in the youth's last frantic letter. And what of this addressing of the bearded and spectacled stranger as "Mr. J. C."? There was no escaping the inference, but there are limits to possible monstrosity. Who was "Simon O."; the old man Ward had visited in Prague four years previously? Perhaps, but in the centuries behind there had been another Simon O.—Simon Orne, alias Jedediah, of Salem, who vanished in 1771, and whose peculiar handwriting Dr. Willett now unmistakably recognised from the photostatic copies of the Orne formulae which Charles had once shewn him. What horrors and mysteries, what contradictions and contraventions of Nature, had come back after a century and a half to harass Old Providence with her clustered spires and domes?

The father and the old physician, virtually at a loss what to do or think, went to see Charles at the hospital and questioned him as delicately as they could about Dr. Allen, about the Prague visit, and about what he had learned of Simon or Jedediah Orne of Salem. To all these inquiries the youth was politely

non-committal, merely barking in his hoarse whisper that he had found Dr. Allen to have a remarkable spiritual rapport with certain souls from the past, and that any correspondent the bearded man might have in Prague would probably be similarly gifted. When they left, Mr. Ward and Dr. Willett realised to their chagrin that they had really been the ones under catechism; and that without imparting anything vital himself, the confined youth had adroitly pumped them of everything the Prague letter had contained.

Drs. Peck, Waite, and Lyman were not inclined to attach much importance to the strange correspondence of young Ward's companion; for they knew the tendency of kindred eccentrics and monomaniacs to band together, and believed that Charles or Allen had merely unearthed an expatriated counterpart—perhaps one who had seen Orne's handwriting and copied it in an attempt to pose as the bygone character's reincarnation. Allen himself was perhaps a similar case, and may have persuaded the youth into accepting him as an avatar of the long-dead Curwen. Such things had been known before, and on the same basis the hard-headed doctors disposed of Willett's growing disquiet about Charles Ward's present handwriting, as studied from unpremeditated specimens obtained by various ruses. Willett thought he had placed its odd familiarity at last, and that what it vaguely resembled

was the bygone penmanship of old Joseph Curwen himself; but this the other physicians regarded as a phase of imitativeness only to be expected in a mania of this sort, and refused to grant it any importance either favourable or unfavourable. Recognising this prosaic attitude in his colleagues, Willett advised Mr. Ward to keep to himself the letter which arrived for Dr. Allen on the second of April from Rakus, Transylvania, in a handwriting so intensely and fundamentally like that of the Hutchinson cipher that both father and physician paused in awe before breaking the seal. This read as follows:

Castle Ferenczy

7 March 1928.

Dear C.:—

Hadd a Squad of 20 Militia up to talk about what the Country Folk say. Must digg deeper and have less Hearde. These Roumanians plague me damnably, being officious and particular where you could buy a Magyar off with a Drinke and ffood. Last monthe M. got me ye Sarcophagus of ye Five Sphinxes from ye Acropolis where He whome I call'd up say'd it would be, and I have hadde 3 Talkes with What was therein inhum'd. It will go to S. O. in Prague directly, and thence to you. It is stubborn but you know ye Way with Such. You shew Wisdom in having lesse about than Before; for there was no Neede to keep the Guards in Shape and eat'g off their Heads, and it made Much to be founde in Case of Trouble, as you too welle knowe. You can

now move and worke elsewhere with no Kill'g Trouble if needful, tho' I hope no Thing will soon force you to so Bothersome a Course. I rejoyce that you traffick not so much with Those Outside; for there was ever a Mortall Peril in it, and you are sensible what it did when you ask'd Protection of One not dispos'd to give it. You excel me in gett'g ye fformulae so another may saye them with Success, but Borellus fancy'd it would be so if just ye right Wordes were hadd. Does ye Boy use 'em often? I regret that he growes squeamish, as I fear'd he would when I hadde him here nigh 15 Monthes, but am sensible you knowe how to deal with him. You can't saye him down with ye fformula, for that will Worke only upon such as ye other fformula hath call'd up from Saltes; but you still have strong Handes and Knife and Pistol, and Graves are not harde to digg, nor Acids loth to burne. O. sayes you have promis'd him B. F. I must have him after. B. goes to you soone, and may he give you what you wishe of that Darke Thing belowe Memphis. Imploy care in what you calle up, and beware of ye Boy. It will be ripe in a yeare's time to have up ye Legions from Underneath, and then there are no Boundes to what shal be oures. Have Confidence in what I saye, for you knowe O. and I have hadd these 150 yeares more than you to consulte these Matters in.

Nephreu—Ka nai Hadoth,

Edw. H.

For J Curwen, Esq.

Providence.

But if Willett and Mr. Ward refrained from shewing this letter to the alienists, they did not refrain from acting upon it themselves. No amount of learned sophistry could controvert the fact that the strangely bearded and spectacled Dr. Allen, of whom Charles's frantic letter had spoken as such a monstrous menace, was in close and sinister correspondence with two inexplicable creatures whom Ward had visited in his travels and who plainly claimed to be survivals or avatars of Curwen's old Salem colleagues; that he was regarding himself as the reincarnation of Joseph Curwen, and that he entertained—or was at least advised to entertain—murderous designs against a "boy" who could scarcely be other than Charles Ward. There was organised horror afoot; and no matter who had started it, the missing Allen was by this time at the bottom of it. Therefore, thanking heaven that Charles was now safe in the hospital, Mr. Ward lost no time in engaging detectives to learn all they could of the cryptic, bearded doctor; finding whence he had come and what Pawtuxet knew of him, and if possible discovering his current whereabouts. Supplying the men with one of the bungalow keys which Charles yielded up, he urged them to explore Allen's vacant room which had been identified when the patient's belongings had been packed; obtaining what clues they could from any effects he might have left about. Mr. Ward talked with the

detectives in his son's old library, and they felt a marked relief when they left it at last; for there seemed to hover about the place a vague aura of evil. Perhaps it was what they had heard of the infamous old wizard whose picture had once stared from the panelled overmantel, and perhaps it was something different and irrelevant; but in any case they all half sensed an intangible miasma which centred in that carven vestige of an older dwelling and which at times almost rose to the intensity of a material emanation.

Part Five:

A NIGHTMARE AND A CATACLYSM.

I.

And now swiftly followed that hideous experience which has left its indelible mark of fear on the soul of Marinus Bicknell Willett, and has added a decade to the visible age of one whose youth was even then far behind. Dr. Willett had conferred at length with Mr. Ward, and had come to an agreement with him on several points which both felt the alienists would ridicule. There was, they conceded, a terrible movement alive in the world, whose direct connexion with a necromancy even older than the Salem witchcraft could not be doubted. That at least two living men—and

one other of whom they dared not think—were in absolute possession of minds or personalities which had functioned as early as 1690 or before was likewise almost unsailably proved even in the face of all known natural laws. What these horrible creatures—and Charles Ward as well—were doing or trying to do seemed fairly clear from their letters and from every bit of light both old and new which had filtered in upon the case. They were robbing the tombs of all the ages, including those of the world's wisest and greatest men, in the hope of recovering from the bygone ashes some vestige of the consciousness and lore which had once animated and informed them.

A hideous traffick was going on among these nightmare ghouls, whereby illustrious bones were bartered with the calm calculativeness of schoolboys swapping books; and from what was extorted from this centuried dust there was anticipated a power and a wisdom beyond anything which the cosmos had ever seen concentrated in one man or group. They had found unholy ways to keep their brains alive, either in the same body or different bodies; and had evidently achieved a way of tapping the consciousness of the dead whom they gathered together. There had, it seems, been some truth in chimerical old Borellus when he wrote of preparing from even the most antique remains certain "Essential Saltes" from which the

shade of a long-dead living thing might be raised up. There was a formula for evoking such a shade, and another for putting it down; and it had now been so perfected that it could be taught successfully. One must be careful about evocations, for the markers of old graves are not always accurate.

Willett and Mr. Ward shivered as they passed from conclusion to conclusion. Things—presences or voices of some sort—could be drawn down from unknown places as well as from the grave, and in this process also one must be careful. Joseph Curwen had indubitably evoked many forbidden things, and as for Charles—what might one think of him? What forces "outside the spheres" had reached him from Joseph Curwen's day and turned his mind on forgotten things? He had been led to find certain directions, and he had used them. He had talked with the man of horror in Prague and stayed long with the creature in the mountains of Transylvania. And he must have found the grave of Joseph Curwen at last. That newspaper item and what his mother had heard in the night were too significant to overlook. Then he had summoned something, and it must have come. That mighty voice aloft on Good Friday, and those different tones in the locked attic laboratory. What were they like, with their depth and hollowness? Was there not here some awful foreshadowing of the dreaded stranger Dr. Allen

with his spectral bass? Yes, that was what Mr. Ward had felt with vague horror in his single talk with the man—if man it were—over the telephone!

What hellish consciousness or voice, what morbid shade or presence, had come to answer Charles Ward's secret rites behind that locked door? Those voices heard in argument—"must have it red for three months"—Good God! Was not that just before the vampirism broke out? The rifling of Ezra Weeden's ancient grave, and the cries later at Pawtuxet—whose mind had planned the vengeance and rediscovered the shunned seat of elder blasphemies? And then the bungalow and the bearded stranger, and the gossip, and the fear. The final madness of Charles neither father nor doctor could attempt to explain, but they did feel sure that the mind of Joseph Curwen had come to earth again and was following its ancient morbidities. Was daemonic possession in truth a possibility? Allen had something to do with it, and the detectives must find out more about one whose existence menaced the young man's life. In the meantime, since the existence of some vast crypt beneath the bungalow seemed virtually beyond dispute, some effort must be made to find it. Willett and Mr. Ward, conscious of the sceptical attitude of the alienists, resolved during their final conference to undertake a joint secret exploration of unparalleled thoroughness; and agreed to

meet at the bungalow on the following morning with valises and with certain tools and accessories suited to architectural search and underground exploration.

The morning of April 6th dawned clear, and both explorers were at the bungalow by ten o'clock. Mr. Ward had the key, and an entry and cursory survey were made. From the disordered condition of Dr. Allen's room it was obvious that the detectives had been there before, and the later searchers hoped that they had found some clue which might prove of value. Of course the main business lay in the cellar; so thither they descended without much delay, again making the circuit which each had vainly made before in the presence of the mad young owner. For a time everything seemed baffling, each inch of the earthen floor and stone walls having so solid and innocuous an aspect that the thought of a yawning aperture was scarcely to be entertained. Willett reflected that since the original cellar was dug without knowledge of any catacombs beneath, the beginning of the passage would represent the strictly modern delving of young Ward and his associates, where they had probed for the ancient vaults whose rumour could have reached them by no wholesome means.

The doctor tried to put himself in Charles's place to see how a delver would be likely to start, but could not gain much inspiration from this method. Then he decided on

elimination as a policy, and went carefully over the whole subterranean surface both vertical and horizontal, trying to account for every inch separately. He was soon substantially narrowed down, and at last had nothing left but the small platform before the washtubs, which he had tried once before in vain. Now experimenting in every possible way, and exerting a double strength, he finally found that the top did indeed turn and slide horizontally on a corner pivot. Beneath it lay a trim concrete surface with an iron manhole, to which Mr. Ward at once rushed with excited zeal. The cover was not hard to lift, and the father had quite removed it when Willett noticed the queerness of his aspect. He was swaying and nodding dizzily, and in the gust of noxious air which swept up from the black pit beneath the doctor soon recognised ample cause.

In a moment Dr. Willett had his fainting companion on the floor above and was reviving him with cold water. Mr. Ward responded feebly, but it could be seen that the mephitic blast from the crypt had in some way gravely sickened him. Wishing to take no chances, Willett hastened out to Broad Street for a taxicab and had soon dispatched the sufferer home despite his weak-voiced protests; after which he produced an electric torch, covered his nostrils with a band of sterile gauze, and descended once more to peer into the new-found depths. The

foul air had now slightly abated, and Willett was able to send a beam of light down the Stygian hole. For about ten feet, he saw, it was a sheer cylindrical drop with concrete walls and an iron ladder; after which the hole appeared to strike a flight of old stone steps which must originally have emerged to earth somewhat southwest of the present building.

II.

Willett freely admits that for a moment the memory of the old Curwen legends kept him from climbing down alone into that malodorous gulf. He could not help thinking of what Luke Fenner had reported on that last monstrous night. Then duty asserted itself and he made the plunge, carrying a great valise for the removal of whatever papers might prove of supreme importance. Slowly, as befitted one of his years, he descended the ladder and reached the slimy steps below. This was ancient masonry, his torch told him; and upon the dripping walls he saw the unwholesome moss of centuries. Down, down, ran the steps; not spirally, but in three abrupt turns; and with such narrowness that two men could have passed only with difficulty. He had counted about thirty when a sound reached him very faintly; and after that he did not feel disposed to count any more.

It was a godless sound; one of those low-keyed, insidious outrages of Nature which are not meant to be. To call it a dull wail, a doom-dragged whine, or a hopeless howl of chorused anguish and stricken flesh without mind would be to miss its most quintessential loathsomeness and soul-sickening overtones. Was it for this that Ward had seemed to listen on that day he was removed? It was the most shocking thing that Willett had ever heard, and it continued from no determinate point as the doctor reached the bottom of the steps and cast his torchlight around on lofty corridor walls surmounted by Cyclopean vaulting and pierced by numberless black archways. The hall in which he stood was perhaps fourteen feet high to the middle of the vaulting and ten or twelve feet broad. Its pavement was of large chipped flagstones, and its walls and roof were of dressed masonry. Its length he could not imagine, for it stretched ahead indefinitely into the blackness. Of the archways, some had doors of the old six-panelled colonial type, whilst others had none.

Overcoming the dread induced by the smell and the howling, Willett began to explore these archways one by one; finding beyond them rooms with groined stone ceilings, each of medium size and apparently of bizarre uses. Most of them had fireplaces, the upper courses of whose chimneys would have formed an interesting study in engineering.

Never before or since had he seen such instruments or suggestions of instruments as here loomed up on every hand through the burying dust and cobwebs of a century and a half, in many cases evidently shattered as if by the ancient raiders. For many of the chambers seemed wholly untrodden by modern feet, and must have represented the earliest and most obsolete phases of Joseph Curwen's experimentation. Finally there came a room of obvious modernity, or at least of recent occupancy. There were oil heaters, bookshelves and tables, chairs and cabinets, and a desk piled high with papers of varying antiquity and contemporaneousness. Candlesticks and oil lamps stood about in several places; and finding a match-safe handy, Willett lighted such as were ready for use.

In the fuller gleam it appeared that this apartment was nothing less than the latest study or library of Charles Ward. Of the books the doctor had seen many before, and a good part of the furniture had plainly come from the Prospect Street mansion. Here and there was a piece well known to Willett, and the sense of familiarity became so great that he half forgot the noisomeness and the wailing, both of which were plainer here than they had been at the foot of the steps. His first duty, as planned long ahead, was to find and seize any papers which might seem of vital importance; especially those portentous documents found

by Charles so long ago behind the picture in Olney Court. As he searched he perceived how stupendous a task the final unravelling would be; for file on file was stuffed with papers in curious hands and bearing curious designs, so that months or even years might be needed for a thorough deciphering and editing. Once he found large packets of letters with Prague and Rakus postmarks, and in writing clearly recognisable as Orne's and Hutchinson's; all of which he took with him as part of the bundle to be removed in his valise.

At last, in a locked mahogany cabinet once gracing the Ward home, Willett found the batch of old Curwen papers; recognising them from the reluctant glimpse Charles had granted him so many years ago. The youth had evidently kept them together very much as they had been when first he found them, since all the titles recalled by the workmen were present except the papers addressed to Orne and Hutchinson, and the cipher with its key. Willett placed the entire lot in his valise and continued his examination of the files. Since young Ward's immediate condition was the greatest matter at stake, the closest searching was done among the most obviously recent matter; and in this abundance of contemporary manuscript one very baffling oddity was noted. The oddity was the slight amount in Charles's normal writing, which indeed

included nothing more recent than two months before. On the other hand, there were literally reams of symbols and formulae, historical notes and philosophical comment, in a crabbed penmanship absolutely identical with the ancient script of Joseph Curwen, though of undeniably modern dating. Plainly, a part of the latter-day programme had been a sedulous imitation of the old wizard's writing, which Charles seemed to have carried to a marvellous state of perfection. Of any third hand which might have been Allen's there was not a trace. If he had indeed come to be the leader, he must have forced young Ward to act as his amanuensis.

In this new material one mystic formula, or rather pair of formulae, recurred so often that Willett had it by heart before he had half finished his quest. It consisted of two parallel columns, the left-hand one surmounted by the archaic symbol called "Dragon's Head" and used in almanacks to indicate the ascending node, and the right-hand one headed by a corresponding sign of "Dragon's Tail" or descending node. The appearance of the whole was something like this, and almost unconsciously the doctor realised that the second half was no more than the first written syllabically backward with the exception of the final monosyllables and of the odd name Yog-Sothoth, which he had come to recognise under various spellings from other things he had

seen in connexion with this horrible matter. The formulae were as follows—exactly so, as Willett is abundantly able to testify—and the first one struck an odd note of uncomfortable latent memory in his brain, which he recognised later when reviewing the events of that horrible Good Friday of the previous year.

Ω
Y'AI NG'NGAH,
YOG-SOTHOTH
H'EE—L'GEB
F'AI THRODOG
UAAAH!
⊗
OGTHROD AI'F
GEB'L—EE'H
YOG-SOTHOTH
'NGAH'NG AI'Y
ZHRO!

So haunting were these formulae, and so frequently did he come upon them, that before the doctor knew it he was repeating them under his breath. Eventually, however, he felt he had secured all the papers he could digest to advantage for the present; hence resolved to examine no more till he could bring the sceptical alienists en masse for an ampler and more systematic raid. He had still to find the hidden laboratory, so leaving his valise in the lighted room he emerged again into the black noisome corridor whose vaulting echoed ceaselessly with that dull and hideous whine.

The next few rooms he tried

were all abandoned, or filled only with crumbling boxes and ominous-looking leaden coffins; but impressed him deeply with the magnitude of Joseph Curwen's original operations. He thought of the slaves and seamen who had disappeared, of the graves which had been violated in every part of the world, and of what that final raiding party must have seen; and then he decided it was better not to think any more. Once a great stone staircase mounted at his right, and he deduced that this must have reached to one of the Curwen outbuildings—perhaps the famous stone edifice with the high slit-like windows—provided the steps he had descended had led from the steep-roofed farmhouse. Suddenly the walls seemed to fall away ahead, and the stench and the wailing grew stronger. Willett saw that he had come upon a vast open space, so great that his torchlight would not carry across it; and as he advanced he encountered occasional stout pillars supporting the arches of the roof.

After a time he reached a circle of pillars grouped like the monoliths of Stonehenge, with a large carved altar on a base of three steps in the centre; and so curious were the carvings on that altar that he approached to study them with his electric light. But when he saw what they were he shrank away shuddering, and did not stop to investigate the dark stains which discoloured the upper surface and had spread down the sides in occasional thin lines. Instead, he

found the distant wall and traced it as it swept round in a gigantic circle perforated by occasional black doorways and indented by a myriad of shallow cells with iron gratings and wrist and ankle bonds on chains fastened to the stone of the concave rear masonry. These cells were empty, but still the horrible odour and the dismal moaning continued, more insistent now than ever, and seemingly varied at times by a sort of slippery thumping.

III.

From that frightful smell and that uncanny noise Willett's attention could no longer be diverted. Both were plainer and more hideous in the great pillared hall than anywhere else, and carried a vague impression of being far below, even in this dark nether world of subterrene mystery. Before trying any of the black archways for steps leading further down, the doctor cast his beam of light about the stone-flagged floor. It was very loosely paved, and at irregular intervals there would occur a slab curiously pierced by small holes in no definite arrangement, while at one point there lay a very long ladder carelessly flung down. To this ladder, singularly enough, appeared to cling a particularly large amount of the frightful odour which encompassed everything. As he walked slowly about it suddenly occurred to Willett that both the

noise and the odour seemed strongest directly above the oddly pierced slabs, as if they might be crude trap-doors leading down to some still deeper region of horror. Kneeling by one, he worked at it with his hands, and found that with extreme difficulty he could budge it. At his touch the moaning beneath ascended to a louder key, and only with vast trepidation did he persevere in the lifting of the heavy stone. A stench unnameable now rose up from below, and the doctor's head reeled dizzily as he laid back the slab and turned his torch upon the exposed square yard of gaping blackness.

If he had expected a flight of steps to some wide gulf of ultimate abomination, Willett was destined to be disappointed; for amidst that foetor and cracked whining he discerned only the brick-faced top of a cylindrical well perhaps a yard and a half in diameter and devoid of any ladder or other means of descent. As the light shone down, the wailing changed suddenly to a series of horrible yelps; in conjunction with which there came again that sound of blind, futile scrambling and slippery thumping. The explorer trembled, unwilling even to imagine what noxious thing might be lurking in that abyss, but in a moment mustered up the courage to peer over the rough-hewn brink; lying at full length and holding the torch downward at arm's length to see what might lie below. For a second he

could distinguish nothing but the slimy, moss-grown brick walls sinking illimitably into that half-tangible miasma of murk and foulness and anguished frenzy; and then he saw that something dark was leaping clumsily and frantically up and down at the bottom of the narrow shaft, which must have been from twenty to twenty-five feet below the stone floor where he lay. The torch shook in his hand, but he looked again to see what manner of living creature might be immured there in the darkness of that unnatural well; left starving by young Ward through all the long month since the doctors had taken him away, and clearly only one of a vast number prisoned in the kindred wells whose pierced stone covers so thickly studded the floor of the great vaulted cavern. Whatever the things were, they could not lie down in their cramped spaces; but must have crouched and whined and waited and feebly leaped all those hideous weeks since their master had abandoned them unheeded.

But Marinus Bicknell Willett was sorry that he looked again; for surgeon and veteran of the dissecting-room though he was, he has not been the same since. It is hard to explain just how a single sight of a tangible object with measureable dimensions could so shake and change a man; and we may only say that there is about certain outlines and entities a power of symbolism and suggestion which acts frightfully on a sensitive thinker's perspective

and whispers terrible hints of obscure cosmic relationships and unnameable realities behind the protective illusions of common vision. In that second look Willett saw such an outline or entity, for during the next few instants he was undoubtedly as stark mad as any inmate of Dr. Waite's private hospital. He dropped the electric torch from a hand drained of muscular power or nervous coördination, nor heeded the sound of crunching teeth which told of its fate at the bottom of the pit. He screamed and screamed and screamed in a voice whose falsetto panic no acquaintance of his would ever have recognised; and though he could not rise to his feet he crawled and rolled desperately away over the damp pavement where dozens of Tartarean wells poured forth their exhausted whining and yelping to answer his own insane cries. He tore his hands on the rough, loose stones, and many times bruised his head against the frequent pillars, but still he kept on. Then at last he slowly came to himself in the utter blackness and stench, and stopped his ears against the droning wail into which the burst of yelping had subsided. He was drenched with perspiration and without means of producing a light; stricken and unnerved in the abysmal blackness and horror, and crushed with a memory he never could efface. Beneath him dozens of those things still lived, and from one of the shafts the cover was removed. He knew that what he had seen

could never climb up the slippery walls, yet shuddered at the thought that some obscure foot-hold might exist.

What the thing was, he would never tell. It was like some of the carvings on the hellish altar, but it was alive. Nature had never made it in this form, for it was too palpably unfinished. The deficiencies were of the most surprising sort, and the abnormalities of proportion could not be described. Willett consents only to say that this type of thing must have represented entities which Ward called up from imperfect salts, and which he kept for servile or ritualistic purposes. If it had not had a certain significance, its image would not have been carved on that damnable stone. It was not the worst thing depicted on that stone—but Willett never opened the other pits. At the time, the first connected idea in his mind was an idle paragraph from some of the old Curwen data he had digested long before; a phrase used by Simon or Jedediah Orne in that portentous confiscated letter to the bygone sorcerer: “Certainly, there was Noth’g but ye liveliest Awfulness in that which H. rais’d upp from What he cou’d gather onlie a part of.”

Then, horribly supplementing rather than displacing this image, there came a recollection of those ancient lingering rumours anent the burned, twisted thing found in the fields a week after the Curwen raid. Charles Ward had once told the

doctor what old Slocum said of that object; that it was neither thoroughly human, nor wholly allied to any animal which Pawtuxet folk had ever seen or read about.

These words hummed in the doctor’s mind as he rocked to and fro, squatting on the nitrous stone floor. He tried to drive them out, and repeated the Lord’s Prayer to himself; eventually trailing off into a mnemonic hodge-podge like the modernistic Waste Land of Mr. T. S. Eliot, and finally reverting to the oft-repeated dual formula he had lately found in Ward’s underground library: “Y’ ai ‘ng’ngah, Yog-Sothoth” and so on till the final underlined “Zhro.” It seemed to soothe him, and he staggered to his feet after a time; lamenting bitterly his fright-lost torch and looking wildly about for any gleam of light in the clutching inkiness of the chilly air. Think he would not; but he strained his eyes in every direction for some faint glint or reflection of the bright illumination he had left in the library. After a while he thought he detected a suspicion of a glow infinitely far away, and toward this he crawled in agonised caution on hands and knees amidst the stench and howling, always feeling ahead lest he collide with the numerous great pillars or stumble into the abominable pit he had uncovered.

Once his shaking fingers touched something which he knew must be the steps leading to the hellish altar, and from this spot he

recoiled in loathing. At another time he encountered the pierced slab he had removed, and here his caution became almost pitiful. But he did not come upon the dread aperture after all, nor did anything issue from that aperture to detain him. What had been down there made no sound nor stir. Evidently its crunching of the fallen electric torch had not been good for it. Each time Willett’s fingers felt a perforated slab he trembled. His passage over it would sometimes increase the groaning below, but generally it would produce no effect at all, since he moved very noiselessly. Several times during his progress the glow ahead diminished perceptibly, and he realised that the various candles and lamps he had left must be expiring one by one. The thought of being lost in utter darkness without matches amidst this underground world of nightmare labyrinths impelled him to rise to his feet and run, which he could safely do now that he had passed the open pit; for he knew that once the light failed, his only hope of rescue and survival would lie in whatever relief party Mr. Ward might send after missing him for a sufficient period. Presently, however, he emerged from the open space into the narrower corridor and definitely located the glow as coming from a door on his right. In a moment he had reached it and was standing once more in young Ward’s secret library, trembling with relief, and watching the sputterings of that

last lamp which had brought him to safety.

IV.

In another moment he was hastily filling the burned-out lamps from an oil supply he had previously noticed, and when the room was bright again he looked about to see if he might find a lantern for further exploration. For racked though he was with horror, his sense of grim purpose was still uppermost; and he was firmly determined to leave no stone unturned in his search for the hideous facts behind Charles Ward’s bizarre madness. Failing to find a lantern, he chose the smallest of the lamps to carry; also filling his pockets with candles and matches, and taking with him a gallon can of oil, which he proposed to keep for reserve use in whatever hidden laboratory he might uncover beyond the terrible open space with its unclean altar and nameless covered wells. To traverse that space again would require his utmost fortitude, but he knew it must be done. Fortunately neither the frightful altar nor the opened shaft was near the vast cell-indented wall which bounded the cavern area, and whose black mysterious archways would form the next goals of a logical search.

So Willett went back to that great pillared hall of stench and anguished howling; turning down

his lamp to avoid any distant glimpse of the hellish altar, or of the uncovered pit with the pierced stone slab beside it. Most of the black doorways led merely to small chambers, some vacant and some evidently used as storerooms; and in several of the latter he saw some very curious accumulations of various objects. One was packed with rotting and dust-draped bales of spare clothing, and the explorer thrilled when he saw that it was unmistakably the clothing of a century and a half before. In another room he found numerous odds and ends of modern clothing, as if gradual provisions were being made to equip a large body of men. But what he disliked most of all were the huge copper vats which occasionally appeared; these, and the sinister incrustations upon them. He liked them even less than the weirdly figured leaden bowls whose rims retained such obnoxious deposits and around which clung repellent odours perceptible above even the general noisomeness of the crypt. When he had completed about half the entire circuit of the wall he found another corridor like that from which he had come, and out of which many doors opened. This he proceeded to investigate; and after entering three rooms of medium size and of no significant contents, he came at last to a large oblong apartment whose business-like tanks and tables, furnaces and modern instruments, occasional books and endless shelves of jars and bottles proclaimed it indeed the

long-sought laboratory of Charles Ward—and no doubt of old Joseph Curwen before him.

After lighting the three lamps which he found filled and ready, Dr. Willett examined the place and all its appurtenances with the keenest interest; noting from the relative quantities of various reagents on the shelves that young Ward's dominant concern must have been with some branch of organic chemistry. On the whole, little could be learned from the scientific ensemble, which included a gruesome-looking dissecting-table; so that the room was really rather a disappointment. Among the books was a tattered old copy of Borellus in black-letter, and it was weirdly interesting to note that Ward had underlined the same passage whose marking had so perturbed good Mr. Merritt at Curwen's farmhouse more than a century and a half before. That older copy, of course, must have perished along with the rest of Curwen's occult library in the final raid. Three archways opened off the laboratory, and these the doctor proceeded to sample in turn. From his cursory survey he saw that two led merely to small storerooms; but these he canvassed with care, remarking the piles of coffins in various stages of damage and shuddering violently at two or three of the few coffin-plates he could decipher. There was much clothing also stored in these rooms, and several new and tightly nailed boxes which he did not stop to

investigate. Most interesting of all, perhaps, were some odd bits which he judged to be fragments of old Joseph Curwen's laboratory appliances. These had suffered damage at the hands of the raiders, but were still partly recognisable as the chemical paraphernalia of the Georgian period.

The third archway led to a very sizeable chamber entirely lined with shelves and having in the centre a table bearing two lamps. These lamps Willett lighted, and in their brilliant glow studied the endless shelving which surrounded him. Some of the upper levels were wholly vacant, but most of the space was filled with small odd-looking leaden jars of two general types; one tall and without handles like a Grecian lekythos or oil-jug, and the other with a single handle and proportioned like a Phaleron jug. All had metal stoppers, and were covered with peculiar-looking symbols moulded in low relief. In a moment the doctor noticed that these jugs were classified with great rigidity; all the lekythoi being on one side of the room with a large wooden sign reading "Custodes" above them, and all the Phalerons on the other, correspondingly labelled with a sign reading "Materia." Each of the jars or jugs, except some on the upper shelves that turned out to be vacant, bore a cardboard tag with a number apparently referring to a catalogue; and Willett resolved to look for the latter presently. For the moment,

however, he was more interested in the nature of the array as a whole, and experimentally opened several of the lekythoi and Phalerons at random with a view to a rough generalisation. The result was invariable. Both types of jar contained a small quantity of a single kind of substance; a fine dusty powder of very light weight and of many shades of dull, neutral colour. To the colours which formed the only point of variation there was no apparent method of disposal; and no distinction between what occurred in the lekythoi and what occurred in the Phalerons. A bluish-grey powder might be by the side of a pinkish-white one, and any one in a Phaleron might have its exact counterpart in a lekythos. The most individual feature about the powders was their non-adhesiveness. Willett would pour one into his hand, and upon returning it to its jug would find that no residue whatever remained on its palm.

The meaning of the two signs puzzled him, and he wondered why this battery of chemicals was separated so radically from those in glass jars on the shelves of the laboratory proper. "Custodes," "Materia"; that was the Latin for "Guards" and "Materials," respectively—and then there came a flash of memory as to where he had seen that word "Guards" before in connexion with this dreadful mystery. It was, of course, in the recent letter to Dr. Allen purporting to be from old

Edward Hutchinson; and the phrase had read: "There was no Neede to keep the Guards in Shape and eat'g off their Heads, and it made Much to be founde in Case of Trouble, as you too welle knowe." What did this signify? But wait—was there not still another reference to "guards" in this matter which he had failed wholly to recall when reading the Hutchinson letter? Back in the old non-secretive days Ward had told him of the Eleazar Smith diary recording the spying of Smith and Weeden on the Curwen farm, and in that dreadful chronicle there had been a mention of conversations overheard before the old wizard betook himself wholly beneath the earth. There had been, Smith and Weeden insisted, terrible colloquies wherein figured Curwen, certain captives of his, and the guards of those captives. Those guards, according to Hutchinson or his avatar, had "eaten their heads off," so that now Dr. Allen did not keep them in shape. And if not in shape, how save as the "salts" to which it appears this wizard band was engaged in reducing as many human bodies or skeletons as they could?

So that was what these lekythoi contained; the monstrous fruit of unhallowed rites and deeds, presumably won or cowed to such submission as to help, when called up by some hellish incantation, in the defence of their blasphemous master or the questioning of those who were not so willing? Willett shuddered at

the thought of what he had been pouring in and out of his hands, and for a moment felt an impulse to flee in panic from that cavern of hideous shelves with their silent and perhaps watching sentinels. Then he thought of the "Materia"—in the myriad Phaleron jugs on the other side of the room. Salts too—and if not the salts of "guards," then the salts of what? God! Could it be possible that here lay the mortal relics of half the titan thinkers of all the ages; snatched by supreme ghouls from crypts where the world thought them safe, and subject to the beck and call of madmen who sought to drain their knowledge for some still wilder end whose ultimate effect would concern, as poor Charles had hinted in his frantic note, "all civilisation, all natural law, perhaps even the fate of the solar system and the universe"? And Marinus Bicknell Willett had sifted their dust through his hands!

Then he noticed a small door at the farther end of the room, and calmed himself enough to approach it and examine the crude sign chiselled above. It was only a symbol, but it filled him with vague spiritual dread; for a morbid, dreaming friend of his had once drawn it on paper and told him a few of the things it means in the dark abyss of sleep. It was the sign of Koth, that dreamers see fixed above the archway of a certain black tower standing alone in twilight—and Willett did not like what his friend Randolph Carter

had said of its powers. But a moment later he forgot the sign as he recognised a new acrid odour in the stench-filled air. This was a chemical rather than animal smell, and came clearly from the room beyond the door. And it was, unmistakably, the same odour which had saturated Charles Ward's clothing on the day the doctors had taken him away. So it was here that the youth had been interrupted by the final summons? He was wiser than old Joseph Curwen, for he had not resisted. Willett, boldly determined to penetrate every wonder and nightmare this nether realm might contain, seized the small lamp and crossed the threshold. A wave of nameless fright rolled out to meet him, but he yielded to no whim and deferred to no intuition. There was nothing alive here to harm him, and he would not be stayed in his piercing of the eldritch cloud which engulfed his patient.

The room beyond the door was of medium size, and had no furniture save a table, a single chair, and two groups of curious machines with clamps and wheels, which Willett recognised after a moment as mediæval instruments of torture. On one side of the door stood a rack of savage whips, above which were some shelves bearing empty rows of shallow pedestalled cups of lead shaped like Grecian kylikes. On the other side was the table; with a powerful Argand lamp, a pad and pencil, and two of the stoppered

lekythoi from the shelves outside set down at irregular places as if temporarily or in haste. Willett lighted the lamp and looked carefully at the pad, to see what notes young Ward might have been jotting down when interrupted; but found nothing more intelligible than the following disjointed fragments in that crabbed Curwen chirography, which shed no light on the case as a whole:

*B. dy'd not. Escap'd into walls and
founde Place below.*

*Sawe olde V. saye ye Sabaoth and
learnt ye Way.*

*Rais'd Yog-Sothoth thrice and was
ye nexte Day deliver'd.*

*F. soughte to wipe out all know'g
howe to raise Those from Outside.*

As the strong Argand blaze lit up the entire chamber the doctor saw that the wall opposite the door, between the two groups of torturing appliances in the corners, was covered with pegs from which hung a set of shapeless-looking robes of a rather dismal yellowish-white. But far more interesting were the two vacant walls, both of which were thickly covered with mystic symbols and formulae roughly chiselled in the smooth dressed stone. The damp floor also bore marks of carving; and with but little difficulty Willett deciphered a huge pentagram in the centre, with a plain circle about three feet wide half way between this and each corner. In one of these four circles, near where a yellowish robe had been

flung carelessly down, there stood a shallow kylix of the sort found on the shelves above the whip-rack; and just outside the periphery was one of the Phaleron jugs from the shelves in the other room, its tag numbered 118. This was unstopped, and proved upon inspection to be empty; but the explorer saw with a shiver that the kylix was not. Within its shallow area, and saved from scattering only by the absence of wind in this sequestered cavern, lay a small amount of a dry, dull-greenish efflorescent powder which must have belonged in the jug; and Willett almost reeled at the implications that came sweeping over him as he correlated little by little the several elements and antecedents of the scene. The whips and the instruments of torture, the dust or salts from the jug of "Materia," the two lekythoi from the "Custodes" shelf, the robes, the formulae on the walls, the notes on the pad, the hints from letters and legends, and the thousand glimpses, doubts, and suppositions which had come to torment the friends and parents of Charles Ward—all these engulfed the doctor in a tidal wave of horror as he looked at that dry greenish powder outspread in the pedestalled leaden kylix on the floor.

With an effort, however, Willett pulled himself together and began studying the formulae chiselled on the walls. From the stained and incrustated letters it was obvious that they were carved in Joseph Curwen's

time, and their text was such as to be vaguely familiar to one who had read much Curwen material or delved extensively into the history of magic. One the doctor clearly recognised as what Mrs. Ward heard her son chanting on that ominous Good Friday a year before, and what an authority had told him was a very terrible invocation addressed to secret gods outside the normal spheres. It was not spelled here exactly as Mrs. Ward had set it down from memory, nor yet as the authority had shewn it to him in the forbidden pages of "Eliphaz Levi"; but its identity was unmistakable, and such words as Sabaoth, Metraton, Almonsin, and Zariatnatmik sent a shudder of fright through the searcher who had seen and felt so much of cosmic abomination just around the corner.

This was on the left-hand wall as one entered the room. The right-hand wall was no less thickly inscribed, and Willett felt a start of recognition as he came upon the pair of formulae so frequently occurring in the recent notes in the library. They were, roughly speaking, the same; with the ancient symbols of "Dragon's Head" and "Dragon's Tail" heading them as in Ward's scribbles. But the spelling differed quite widely from that of the modern versions, as if old Curwen had had a different way of recording sound, or as if later study had evolved more powerful and perfected variants of the invocations in question. The

doctor tried to reconcile the chiselled version with the one which still ran persistently in his head, and found it hard to do. Where the script he had memorised began "Y'ai 'ng'ngah, Yog-Sothoth," this epigraph started out as "Aye, engengah, Yogge-Sothotha"; which to his mind would seriously interfere with the syllabification of the second word.

Ground as the later text was into his consciousness, the discrepancy disturbed him; and he found himself chanting the first of the formulae aloud in an effort to square the sound he conceived with the letters he found carved. Weird and menacing in that abyss of antique blasphemy rang his voice; its accents keyed to a droning sing-song either through the spell of the past and the unknown, or through the hellish example of that dull, godless wail from the pits whose inhuman cadences rose and fell rhythmically in the distance through the stench and the darkness.

Ω
Y'AI 'NG'NGAH,
YOG-SOTHOTH
H'EE—L'GEB
F'AI THRODOG
UAAAH!"

But what was this cold wind which had sprung into life at the very outset of the chant? The lamps were sputtering woefully, and the gloom grew so dense that the letters on the wall nearly faded from sight. There was smoke, too, and an acrid

odour which quite drowned out the stench from the far-away wells; an odour like that he had smelt before, yet infinitely stronger and more pungent. He turned from the inscriptions to face the room with its bizarre contents, and saw that the kylix on the floor, in which the ominous efflorescent powder had lain, was giving forth a cloud of thick, greenish-black vapour of surprising volume and opacity. That powder—Great God! it had come from the shelf of "Materia"—what was it doing now, and what had started it? The formula he had been chanting—the first of the pair—Dragon's Head, ascending node—Blessed Saviour, could it be....

The doctor reeled, and through his head raced wildly disjointed scraps from all he had seen, heard, and read of the frightful case of Joseph Curwen and Charles Dexter Ward. "I say to you againe, doe not call up Any that you can not put downe... Have ye Wordes for laying at all times readie, and stopp not to be sure when there is any Doubte of Whom you have... Three Talkes with What was therein inhum'd..." Mercy of Heaven, what is that shape behind the parting smoke?

V.

Marinus Bicknell Willett has no hope that any part of his tale will be believed except by certain sympathetic friends, hence he has made

no attempt to tell it beyond his most intimate circle. Only a few outsiders have ever heard it repeated, and of these the majority laugh and remark that the doctor surely is getting old. He has been advised to take a long vacation and to shun future cases dealing with mental disturbance. But Mr. Ward knows that the veteran physician speaks only a horrible truth. Did not he himself see the noisome aperture in the bungalow cellar? Did not Willett send him home overcome and ill at eleven o'clock that portentous morning? Did he not telephone the doctor in vain that evening, and again the next day, and had he not driven to the bungalow itself on that following noon, finding his friend unconscious but unharmed on one of the beds upstairs? Willett had been breathing stertorously, and opened his eyes slowly when Mr. Ward gave him some brandy fetched from the car. Then he shuddered and screamed, crying out, "That beard... those eyes.... God, who are you?" A very strange thing to say to a trim, blue-eyed, clean-shaven gentleman whom he had known from the latter's boyhood.

In the bright noon sunlight the bungalow was unchanged since the previous morning. Willett's clothing bore no disarrangement beyond certain smudges and worn places at the knees, and only a faint acrid odour reminded Mr. Ward of what he had smelt on his son that day he

was taken to the hospital. The doctor's flashlight was missing, but his valise was safely there, as empty as when he had brought it. Before indulging in any explanations, and obviously with great moral effort, Willett staggered dizzily down to the cellar and tried the fateful platform before the tubs. It was unyielding. Crossing to where he had left his yet unused tool satchel the day before, he obtained a chisel and began to pry up the stubborn planks one by one. Underneath the smooth concrete was still visible, but of any opening or perforation there was no longer a trace. Nothing yawned this time to sicken the mystified father who had followed the doctor downstairs; only the smooth concrete underneath the planks—no noisome well, no world of subterrene horrors, no secret library, no Curwen papers, no nightmare pits of stench and howling, no laboratory or shelves or chiselled formulae, no.... Dr. Willett turned pale, and clutched at the younger man. "Yesterday," he asked softly, "did you see it here... and smell it?" And when Mr. Ward, himself transfixed with dread and wonder, found strength to nod an affirmative, the physician gave a sound half a sigh and half a gasp, and nodded in turn. "Then I will tell you," he said.

So for an hour, in the sunniest room they could find upstairs, the physician whispered his frightful tale to the wondering father. There was nothing to relate beyond the looming

up of that form when the greenish-black vapour from the kylix parted, and Willett was too tired to ask himself what had really occurred. There were futile, bewildered head-shakings from both men, and once Mr. Ward ventured a hushed suggestion, "Do you suppose it would be of any use to dig?" The doctor was silent, for it seemed hardly fitting for any human brain to answer when powers of unknown spheres had so vitally encroached on this side of the Great Abyss. Again Mr. Ward asked, "But where did it go? It brought you here, you know, and it sealed up the hole somehow." And Willett again let silence answer for him.

But after all, this was not the final phase of the matter. Reaching for his handkerchief before rising to leave, Dr. Willett's fingers closed upon a piece of paper in his pocket which had not been there before, and which was companioned by the candles and matches he had seized in the vanished vault. It was a common sheet, torn obviously from the cheap pad in that fabulous room of horror somewhere underground, and the writing upon it was that of an ordinary lead pencil—doubtless the one which had lain beside the pad. It was folded very carelessly, and beyond the faint acrid scent of the cryptic chamber bore no print or mark of any world but this. But in the text itself it did indeed reek with wonder; for here was no script of any wholesome age, but the laboured

strokes of mediaeval darkness, scarcely legible to the laymen who now strained over it, yet having combinations of symbols which seemed vaguely familiar. The briefly scrawled message was this, and its mystery lent purpose to the shaken pair, who forthwith walked steadily out to the Ward car and gave orders to be driven first to a quiet dining place and then to the John Hay Library on the hill.

At the library it was easy to find good manuals of palaeography, and over these the two men puzzled till the lights of evening shone out from the great chandelier. In the end they found what was needed. The letters were indeed no fantastic invention, but the normal script of a very dark period. They were the pointed Saxon minuscules of the eighth or ninth century A.D., and brought with them memories of an uncouth time when under a fresh Christian veneer ancient faiths and ancient rites stirred stealthily, and the pale moon of Britain looked sometimes on strange deeds in the Roman ruins of Caerleon and Hexham, and by the towers along Hadrian's crumbling wall. The words were in such Latin as a barbarous age might remember—"Corvinus necandus est. Cadaver aq(ua) forti dissolvendum, nec aliq(ui)d retinendum. Tace ut potes."—which may roughly be translated, "Curwen must be killed. The body must be dissolved in aqua fortis, nor must anything be retained. Keep silence as best you are able."

Willett and Mr. Ward were mute and baffled. They had met the unknown, and found that they lacked emotions to respond to it as they vaguely believed they ought. With Willett, especially, the capacity for receiving fresh impressions of awe was well-nigh exhausted; and both men sat still and helpless till the closing of the library forced them to leave. Then they drove listlessly to the Ward mansion in Prospect Street, and talked to no purpose into the night. The doctor rested toward morning, but did not go home. And he was still there Sunday noon when a telephone message came from the detectives who had been assigned to look up Dr. Allen.

Mr. Ward, who was pacing nervously about in a dressing-gown, answered the call in person; and told the men to come up early the next day when he heard their report was almost ready. Both Willett and he were glad that this phase of the matter was taking form, for whatever the origin of the strange minuscule message, it seemed certain that the "Curwen" who must be destroyed could be no other than the bearded and spectacled stranger. Charles had feared this man, and had said in the frantic note that he must be killed and dissolved in acid. Allen, moreover, had been receiving letters from the strange wizards in Europe under the name of Curwen, and palpably regarded himself as an avatar of the bygone necromancer. And now from a fresh and unknown source had

come a message saying that "Curwen" must be killed and dissolved in acid. The linkage was too unmistakable to be factitious; and besides, was not Allen planning to murder young Ward upon the advice of the creature called Hutchinson? Of course, the letter they had seen had never reached the bearded stranger; but from its text they could see that Allen had already formed plans for dealing with the youth if he grew too "squeamish." Without doubt, Allen must be apprehended; and even if the most drastic directions were not carried out, he must be placed where he could inflict no harm upon Charles Ward.

That afternoon, hoping against hope to extract some gleam of information anent the inmost mysteries from the only available one capable of giving it, the father and the doctor went down the bay and called on young Charles at the hospital. Simply and gravely Willett told him all he had found, and noticed how pale he turned as each description made certain the truth of the discovery. The physician employed as much dramatic effect as he could, and watched for a wincing on Charles's part when he approached the matter of the covered pits and the nameless hybrids within. But Ward did not wince. Willett paused, and his voice grew indignant as he spoke of how the things were starving. He taxed the youth with shocking inhumanity, and shivered when only a sardonic laugh came in

reply. For Charles, having dropped as useless his pretence that the crypt did not exist, seemed to see some ghastly jest in this affair; and chuckled hoarsely at something which amused him. Then he whispered, in accents doubly terrible because of the cracked voice he used, "Damn 'em, they do eat, but they don't need to! That's the rare part! A month, you say, without food? Lud, Sir, you be modest! D'ye know, that was the joke on poor old Whipple with his virtuous bluster! Kill everything off, would he? Why, damme, he was half-deaf with the noise from Outside and never saw or heard aught from the wells! He never dreamed they were there at all! Devil take ye, those cursed things have been howling down there ever since Curwen was done for a hundred and fifty-seven years gone!"

But no more than this could Willett get from the youth. Horrified, yet almost convinced against his will, he went on with his tale in the hope that some incident might startle his auditor out of the mad composure he maintained. Looking at the youth's face, the doctor could not but feel a kind of terror at the changes which recent months had wrought. Truly, the boy had drawn down nameless horrors from the skies. When the room with the formulae and the greenish dust was mentioned, Charles shewed his first sign of animation. A quizzical look overspread his face as he heard what Willett had read on the pad, and he

ventured the mild statement that those notes were old ones, of no possible significance to anyone not deeply initiated in the history of magic. "But," he added, "had you but known the words to bring up that which I had out in the cup, you had not been here to tell me this." 'Twas Number 118, and I conceive you would have shook had you looked it up in my list in t'other room.' 'Twas never raised by me, but I meant to have it up that day you came to invite me hither."

Then Willett told of the formula he had spoken and of the greenish-black smoke which had arisen; and as he did so he saw true fear dawn for the first time on Charles Ward's face. "It came, and you be here alive?" As Ward croaked the words his voice seemed almost to burst free of its trammels and sink to cavernous abysses of uncanny resonance. Willett, gifted with a flash of inspiration, believed he saw the situation, and wove into his reply a caution from a letter he remembered. "No. 118, you say? But don't forget that stones are all changed now in nine grounds out of ten. You are never sure till you question!" And then, without warning, he drew forth the minuscule message and flashed it before the patient's eyes. He could have wished no stronger result, for Charles Ward fainted forthwith.

All this conversation, of course, had been conducted with the greatest secrecy lest the resident alienists accuse the father and the physician

of encouraging a madman in his delusions. Unaided, too, Dr. Willett and Mr. Ward picked up the stricken youth and placed him on the couch. In reviving, the patient mumbled many times of some word which he must get to Orne and Hutchinson at once; so when his consciousness seemed fully back the doctor told him that of those strange creatures at least one was his bitter enemy, and had given Dr. Allen advice for his assassination. This revelation produced no visible effect, and before it was made the visitors could see that their host had already the look of a hunted man. After that he would converse no more, so Willett and the father departed presently; leaving behind a caution against the bearded Allen, to which the youth only replied that this individual was very safely taken care of, and could do no one any harm even if he wished. This was said with an almost evil chuckle very painful to hear. They did not worry about any communications Charles might indite to that monstrous pair in Europe, since they knew that the hospital authorities seized all outgoing mail for censorship and would pass no wild or outré-looking missive.

There is, however, a curious sequel to the matter of Orne and Hutchinson, if such indeed the exiled wizards were. Moved by some vague presentiment amidst the horrors of that period, Willett arranged with an international press-cutting bureau for accounts of

notable current crimes and accidents in Prague and in eastern Transylvania; and after six months believed that he had found two very significant things amongst the multifarious items he received and had translated. One was the total wrecking of a house by night in the oldest quarter of Prague, and the disappearance of the evil old man called Josef Nadek, who had dwelt in it alone ever since anyone could remember. The other was a titan explosion in the Transylvanian mountains east of Rakus, and the utter extirpation with all its inmates of the ill-regarded Castle Ferenczy, whose master was so badly spoken of by peasants and soldiery alike that he would shortly have been summoned to Bucharest for serious questioning had not this incident cut off a career already so long as to antedate all common memory. Willett maintains that the hand which wrote those minuscules was able to wield stronger weapons as well; and that while Curwen was left to him to dispose of, the writer felt able to find and deal with Orne and Hutchinson itself. Of what their fate may have been the doctor strives sedulously not to think.

VI.

The following morning Dr. Willett hastened to the Ward home to be present when the detectives arrived. Allen's destruction or imprisonment—or Curwen's, if one might regard the

tacit claim to reincarnation as valid—he felt must be accomplished at any cost, and he communicated this conviction to Mr. Ward as they sat waiting for the men to come. They were downstairs this time, for the upper parts of the house were beginning to be shunned because of a peculiar nauseousness which hung indefinitely about; a nauseousness which the older servants connected with some curse left by the vanished Curwen portrait.

At nine o'clock the three detectives presented themselves and immediately delivered all that they had to say. They had not, regrettably enough, located the Brava Tony Gomes as they had wished, nor had they found the least trace of Dr. Allen's source or present whereabouts; but they had managed to unearth a considerable number of local impressions and facts concerning the reticent stranger. Allen had struck Pawtuxet people as a vaguely unnatural being, and there was a universal belief that his thick sandy beard was either dyed or false—a belief conclusively upheld by the finding of such a false beard, together with a pair of dark glasses, in his room at the fateful bungalow. His voice, Mr. Ward could well testify from his one telephone conversation, had a depth and hollowness that could not be forgotten; and his glance seemed malign even through his smoked and horn-rimmed glasses. One

shopkeeper, in the course of negotiations, had seen a specimen of his handwriting and declared it was very queer and crabbed; this being confirmed by pencilled notes of no clear meaning found in his room and identified by the merchant. In connexion with the vampirism rumours of the preceding summer, a majority of the gossips believed that Allen rather than Ward was the actual vampire. Statements were also obtained from the officials who had visited the bungalow after the unpleasant incident of the motor truck robbery. They had felt less of the sinister in Dr. Allen, but had recognised him as the dominant figure in the queer shadowy cottage. The place had been too dark for them to observe him clearly, but they would know him again if they saw him. His beard had looked odd, and they thought he had some slight scar above his dark spectacled right eye. As for the detectives' search of Allen's room, it yielded nothing definite save the beard and glasses, and several pencilled notes in a crabbed writing which Willett at once saw was identical with that shared by the old Curwen manuscripts and by the voluminous recent notes of young Ward found in the vanished catacombs of horror.

Dr. Willett and Mr. Ward caught something of a profound, subtle, and insidious cosmic fear from this data as it was gradually unfolded, and almost trembled in following up the vague, mad thought which had

simultaneously reached their minds. The false beard and glasses—the crabbed Curwen penmanship—the old portrait and its tiny scar—and the altered youth in the hospital with such a scar—that deep, hollow voice on the telephone—was it not of this that Mr. Ward was reminded when his son barked forth those pitiable tones to which he now claimed to be reduced? Who had ever seen Charles and Allen together? Yes, the officials had once, but who later on? Was it not when Allen left that Charles suddenly lost his growing fright and began to live wholly at the bungalow? Curwen—Allen—Ward—in what blasphemous and abominable fusion had two ages and two persons become involved? That damnable resemblance of the picture to Charles—had it not used to stare and stare, and follow the boy around the room with its eyes? Why, too, did both Allen and Charles copy Joseph Curwen’s handwriting, even when alone and off guard? And then the frightful work of those people—the lost crypt of horrors that had aged the doctor overnight; the starved monsters in the noisome pits; the awful formula which had yielded such nameless results; the message in minuscules found in Willett’s pocket; the papers and the letters and all the talk of graves and “salts” and discoveries—whither did everything lead? In the end Mr. Ward did the most sensible thing. Steeling himself against any realisation of why he did it, he gave the detectives

an article to be shewn to such Pawtuxet shopkeepers as had seen the portentous Dr. Allen. That article was a photograph of his luckless son, on which he now carefully drew in ink the pair of heavy glasses and the black pointed beard which the men had brought from Allen’s room.

For two hours he waited with the doctor in the oppressive house where fear and miasma were slowly gathering as the empty panel in the upstairs library leered and leered and leered. Then the men returned. Yes. The altered photograph was a very passable likeness of Dr. Allen. Mr. Ward turned pale, and Willett wiped a suddenly dampened brow with his handkerchief. Allen—Ward—Curwen—it was becoming too hideous for coherent thought. What had the boy called out of the void, and what had it done to him? What, really, had happened from first to last? Who was this Allen who sought to kill Charles as too “squeamish,” and why had his destined victim said in the postscript to that frantic letter that he must be so completely obliterated in acid? Why, too, had the minuscule message, of whose origin no one dared think, said that “Curwen” must be likewise obliterated? What was the change, and when had the final stage occurred? That day when his frantic note was received—he had been nervous all the morning, then there was an alteration. He had slipped out unseen and swaggered boldly in past the

men hired to guard him. That was the time, when he was out. But no—had he not cried out in terror as he entered his study—this very room? What had he found there? Or wait—what had found him? That simulacrum which brushed boldly in without having been seen to go—was that an alien shadow and a horror forcing itself upon a trembling figure which had never gone out at all? Had not the butler spoken of queer noises?

Willett rang for the man and asked him some low-toned questions. It had, surely enough, been a bad business. There had been noises—a cry, a gasp, a choking, and a sort of clattering or creaking or thumping, or all of these. And Mr. Charles was not the same when he stalked out without a word. The butler shivered as he spoke, and sniffed at the heavy air that blew down from some open window upstairs. Terror had settled definitely upon the house, and only the business-like detectives failed to imbibe a full measure of it. Even they were restless, for this case had held vague elements in the background which pleased them not at all. Dr. Willett was thinking deeply and rapidly, and his thoughts were terrible ones. Now and then he would almost break into muttering as he ran over in his head a new, appalling, and increasingly conclusive chain of nightmare happenings.

Then Mr. Ward made a sign that the conference was over, and

everyone save him and the doctor left the room. It was noon now, but shadows as of coming night seemed to engulf the phantom-haunted mansion. Willett began talking very seriously to his host, and urged that he leave a great deal of the future investigation to him. There would be, he predicted, certain obnoxious elements which a friend could bear better than a relative. As family physician he must have a free hand, and the first thing he required was a period alone and undisturbed in the abandoned library upstairs, where the ancient overmantel had gathered about itself an aura of noisome horror more intense than when Joseph Curwen’s features themselves glanced slyly down from the painted panel.

Mr. Ward, dazed by the flood of grotesque morbidities and unthinkably maddening suggestions that poured in upon him from every side, could only acquiesce; and half an hour later the doctor was locked in the shunned room with the panelling from Olney Court. The father, listening outside, heard fumbling sounds of moving and rummaging as the moments passed; and finally a wrench and a creak, as if a tight cupboard door were being opened. Then there was a muffled cry, a kind of snorting choke, and a hasty slamming of whatever had been opened. Almost at once the key rattled and Willett appeared in the hall, haggard and ghastly, and demanding wood for the real fireplace on the south

wall of the room. The furnace was not enough, he said; and the electric log had little practical use. Longing yet not daring to ask questions, Mr. Ward gave the requisite orders and a man brought some stout pine logs, shuddering as he entered the tainted air of the library to place them in the grate. Willett meanwhile had gone up to the dismantled laboratory and brought down a few odds and ends not included in the moving of the July before. They were in a covered basket, and Mr. Ward never saw what they were.

Then the doctor locked himself in the library once more, and by the clouds of smoke which rolled down past the windows from the chimney it was known that he had lighted the fire. Later, after a great rustling of newspapers, that odd wrench and creaking were heard again; followed by a thumping which none of the eavesdroppers liked. Thereafter two suppressed cries of Willett's were heard, and hard upon these came a swishing rustle of indefinable hatefulness. Finally the smoke that the wind beat down from the chimney grew very dark and acrid, and everyone wished that the weather had spared them this choking and venomous inundation of peculiar fumes. Mr. Ward's head reeled, and the servants all clustered together in a knot to watch the horrible black smoke swoop down. After an age of waiting the vapours seemed to lighten, and half-formless sounds of scraping, sweeping, and other minor

operations were heard behind the bolted door. And at last, after the slamming of some cupboard within, Willett made his appearance—sad, pale, and haggard, and bearing the cloth-draped basket he had taken from the upstairs laboratory. He had left the window open, and into that once accursed room was pouring a wealth of pure, wholesome air to mix with a queer new smell of disinfectants. The ancient overmantel still lingered; but it seemed robbed of malignity now, and rose as calm and stately in its white panelling as if it had never borne the picture of Joseph Curwen. Night was coming on, yet this time its shadows held no latent fright, but only a gentle melancholy.

Of what he had done the doctor would never speak. To Mr. Ward he said, "I can answer no questions, but I will say that there are different kinds of magic. I have made a great purgation, and those in this house will sleep the better for it."

VII.

That Dr. Willett's "purgation" had been an ordeal almost as nerve-racking in its way as his hideous wandering in the vanished crypt is shewn by the fact that the elderly physician gave out completely as soon as he reached home that evening. For three days he rested constantly in his room, though servants later muttered something about having

heard him after midnight on Wednesday, when the outer door softly opened and closed with phenomenal softness. Servants' imaginations, fortunately, are limited, else comment might have been excited by an item in Thursday's Evening Bulletin which ran as follows:

NORTH END GHOULS AGAIN ACTIVE

After a lull of ten months since the dastardly vandalism in the Weeden lot at the North Burial Ground, a nocturnal prowler was glimpsed early this morning in the same cemetery by Robert Hart, the night watchman. Happening to glance for a moment from his shelter at about 2 a.m., Hart observed the glow of a lantern or pocket torch not far to the northwest, and upon opening the door detected the figure of a man with a trowel very plainly silhouetted against a nearby electric light. At once starting in pursuit, he saw the figure dart hurriedly toward the main entrance, gaining the street and losing himself among the shadows before approach or capture was possible.

Like the first of the ghouls active during the past year, this intruder had done no real damage before detection. A vacant part of the Ward lot shewed signs of a little superficial digging, but nothing even nearly the size of a grave had been attempted, and no previous grave had been disturbed.

Hart, who cannot describe the prowler except as a small man probably

having a full beard, inclines to the view that all three of the digging incidents have a common source; but police from the Second Station think otherwise on account of the savage nature of the second incident, where an ancient coffin was removed and its headstone violently shattered.

The first of the incidents, in which it is thought an attempt to bury something was frustrated, occurred a year ago last March, and has been attributed to bootleggers seeking a cache. It is possible, says Sergt. Riley, that this third affair is of similar nature. Officers at the Second Station are taking especial pains to capture the gang of miscreants responsible for these repeated outrages.

All day Thursday Dr. Willett rested as if recuperating from something past or nerving himself for something to come. In the evening he wrote a note to Mr. Ward, which was delivered the next morning and which caused the half-dazed parent to ponder long and deeply. Mr. Ward had not been able to go down to business since the shock of Monday with its baffling reports and its sinister "purgation," but he found something calming about the doctor's letter in spite of the despair it seemed to promise and the fresh mysteries it seemed to evoke.

10 Barnes St.,
Providence, R. I.
April 12, 1928.

Dear Theodore:—

I feel that I must say a word to you

before doing what I am going to do tomorrow. It will conclude the terrible business we have been going through (for I feel that no spade is ever likely to reach that monstrous place we know of), but I'm afraid it won't set your mind at rest unless I expressly assure you how very conclusive it is.

You have known me ever since you were a small boy, so I think you will not distrust me when I hint that some matters are best left undecided and unexplored. It is better that you attempt no further speculation as to Charles's case, and almost imperative that you tell his mother nothing more than she already suspects. When I call on you tomorrow Charles will have escaped. That is all which need remain in anyone's mind. He was mad, and he escaped. You can tell his mother gently and gradually about the mad part when you stop sending the typed notes in his name. I'd advise you to join her in Atlantic City and take a rest yourself. God knows you need one after this shock, as I do myself. I am going South for a while to calm down and brace up.

So don't ask me any questions when I call. It may be that something will go wrong, but I'll tell you if it does. I don't think it will. There will be nothing more to worry about, for Charles will be very, very safe. He is now—safer than you dream. You need hold no fears about Allen, and who or what he is. He forms as much a part of the past as Joseph Curwen's picture, and when I ring your doorbell you may feel certain that there is no such person. And what wrote that minuscule message will

never trouble you or yours.

But you must steel yourself to melancholy, and prepare your wife to do the same. I must tell you frankly that Charles's escape will not mean his restoration to you. He has been afflicted with a peculiar disease, as you must realise from the subtle physical as well as mental changes in him, and you must not hope to see him again. Have only this consolation—that he was never a fiend or even truly a madman, but only an eager, studious, and curious boy whose love of mystery and of the past was his undoing. He stumbled on things no mortal ought ever to know, and reached back through the years as no one ever should reach; and something came out of those years to engulf him.

And now comes the matter in which I must ask you to trust me most of all. For there will be, indeed, no uncertainty about Charles's fate. In about a year, say, you can if you wish devise a suitable account of the end; for the boy will be no more. You can put up a stone in your lot at the North Burial Ground exactly ten feet west of your father's and facing the same way, and that will mark the true resting-place of your son. Nor need you fear that it will mark any abnormality or changeling. The ashes in that grave will be those of your own unaltered bone and sinew—of the real Charles Dexter Ward whose mind you watched from infancy—the real Charles with the olive-mark on his hip and without the black witch-mark on his chest or the pit on his forehead. The Charles who never did actual evil, and who will have paid with his life for his "squeamishness."

That is all. Charles will have escaped, and a year from now you can put up his stone. Do not question me tomorrow. And believe that the honour of your ancient family remains untainted now, as it has been at all times in the past.

With profoundest sympathy, and exhortations to fortitude, calmness, and resignation, I am ever

Sincerely your friend,

MARINUS B. WILLETT.

So on the morning of Friday, April 13, 1928, Marinus Bicknell Willett visited the room of Charles Dexter Ward at Dr. Waite's private hospital on Conanicut Island. The youth, though making no attempt to evade his caller, was in a sullen mood; and seemed disinclined to open the conversation which Willett obviously desired. The doctor's discovery of the crypt and his monstrous experience therein had of course created a new source of embarrassment, so that both hesitated perceptibly after the interchange of a few strained formalities. Then a new element of constraint crept in, as Ward seemed to read behind the doctor's mask-like face a terrible purpose which had never been there before. The patient quailed, conscious that since the last visit there had been a change whereby the solicitous family physician had given place to the ruthless and implacable avenger.

Ward actually turned pale, and

the doctor was the first to speak. "More," he said, "has been found out, and I must warn you fairly that a reckoning is due."

"Digging again, and coming upon more poor starving pets?" was the ironic reply. It was evident that the youth meant to shew bravado to the last.

"No," Willett slowly rejoined, "this time I did not have to dig. We have had men looking up Dr. Allen, and they found the false beard and spectacles in the bungalow."

"Excellent," commented the disquieted host in an effort to be wittily insulting, "and I trust they proved more becoming than the beard and glasses you now have on!"

"They would become you very well," came the even and studied response, "as indeed they seem to have done."

As Willett said this, it almost seemed as though a cloud passed over the sun; though there was no change in the shadows on the floor. Then Ward ventured:

"And is this what asks so hotly for a reckoning? Suppose a man does find it now and then useful to be twofold?"

"No," said Willett gravely, "again you are wrong. It is no business of mine if any man seeks duality; provided he has any right to exist at all, and provided he does not destroy what called him out of space."

Ward now started violently. "Well, Sir, what have ye found, and what d'ye want with me?"

The doctor let a little time elapse before replying, as if choosing his words for an effective answer.

"I have found," he finally intoned, "something in a cupboard behind an ancient overmantel where a picture once was, and I have burned it and buried the ashes where the grave of Charles Dexter Ward ought to be."

The madman choked and sprang from the chair in which he had been sitting:

"Damn ye, who did ye tell—and who'll believe it was he after these full two full months, with me alive? What d'ye mean to do?"

Willett, though a small man, actually took on a kind of judicial majesty as he calmed the patient with a gesture.

"I have told no one. This is no common case—it is a madness out of time and a horror from beyond the spheres which no police or lawyers or courts or alienists could ever fathom or grapple with. Thank God some chance has left inside me the spark of imagination, that I might not go astray in thinking out this thing. You cannot deceive me, Joseph Curwen, for I know that your accursed magic is true!"

"I know how you wove the spell that brooded outside the years and fastened on your double and descendant; I know how you drew him into the past and got him to raise you up from your detestable grave; I know how he kept you hidden in his laboratory while you studied modern

things and roved abroad as a vampire by night, and how you later shewed yourself in beard and glasses that no one might wonder at your godless likeness to him; I know what you resolved to do when he balked at your monstrous rifling of the world's tombs, and at what you planned afterward, and I know how you did it."

"You left off your beard and glasses and fooled the guards around the house. They thought it was he who went in, and they thought it was he who came out when you had strangled and hidden him. But you hadn't reckoned on the different contents of two minds. You were a fool, Curwen, to fancy that a mere visual identity would be enough. Why didn't you think of the speech and the voice and the handwriting? It hasn't worked, you see, after all. You know better than I who or what wrote that message in minuscules, but I will warn you it was not written in vain. There are abominations and blasphemies which must be stamped out, and I believe that the writer of those words will attend to Orne and Hutchinson. One of those creatures wrote you once, 'do not call up any that you can not put down'. You were undone once before, perhaps in that very way, and it may be that your own evil magic will undo you all again. Curwen, a man can't tamper with Nature beyond certain limits, and every horror you have woven will rise up to wipe you out."

But here the doctor was cut short

by a convulsive cry from the creature before him. Hopelessly at bay, weaponless, and knowing that any show of physical violence would bring a score of attendants to the doctor's rescue, Joseph Curwen had recourse to his one ancient ally, and began a series of cabbalistic motions with his forefingers as his deep, hollow voice, now unconcealed by feigned hoarseness, bellowed out the opening words of a terrible formula. "*PER ADONAI ELOIM, ADONAI JEHOVA, ADONAI SABAOTH, METRATON...*"

But Willett was too quick for him. Even as the dogs in the yard outside began to howl, and even as a chill wind sprang suddenly up from the bay, the doctor commenced the solemn and measured intonation of that which he had meant all along to recite. An eye for an eye—magic for magic—let the outcome shew how well the lesson of the abyss had been learned! So in a clear voice Marinus Bicknell Willett began the second of that pair of formulae whose first had raised the writer of those minuscules—the cryptic invocation whose heading was the Dragon's Tail, sign of the descending node—

☪

OGTHROD AIF

GEB'L—EE'H

YOG-SOTHOTH

NGAH'NG AI'Y

ZHRO!"

At the very first word from Willett's mouth the previously commenced formula of the patient

stopped short. Unable to speak, the monster made wild motions with his arms until they too were arrested. When the awful name of Yog-Sothoth was uttered, the hideous change began. It was not merely a dissolution, but rather a transformation or recapitulation; and Willett shut his eyes lest he faint before the rest of the incantation could be pronounced.

But he did not faint, and that man of unholy centuries and forbidden secrets never troubled the world again. The madness out of time had subsided, and the case of Charles Dexter Ward was closed. Opening his eyes before staggering out of that room of horror, Dr. Willett saw that what he had kept in memory had not been kept amiss. There had, as he had predicted, been no need for acids. For like his accursed picture a year before, Joseph Curwen now lay scattered on the floor as a thin coating of fine bluish-grey dust.

The VERY OLD FOLK.

[RETURN TO TABLE OF CONTENTS]

It was a flaming sunset or late afternoon in the tiny provincial town of Pompelo, at the foot of the Pyrenees in Hispania Citerior. The year must have been in the late republic, for the province was still ruled by a senatorial proconsul instead of a prætorian legate of Augustus, and the day was the first before the Kalends of November. The hills rose scarlet and gold to the north of the little town, and the westering sun shone ruddily and mystically on the crude new stone and plaster buildings of the dusty forum and the wooden walls of the circus some distance to the east. Groups of citizens—broad-browed Roman colonists and coarse-haired Romanised natives, together with obvious hybrids of the two strains,

alike clad in cheap woollen togas—and sprinklings of helmeted legionaries and coarse-mantled, black-bearded tribesmen of the circumambient Vascones—all thronged the few paved streets and forum; moved by some vague and ill-defined uneasiness.

I myself had just alighted from a litter, which the Illyrian bearers seemed to have brought in some haste from Calagurris, across the Iberus to the southward. It appeared that I was a provincial quæstor named L. Cælius Rufus, and that I had been summoned by the proconsul, P. Scribonius Libo, who had come from Tarraco some days before. The soldiers were the fifth cohort of the XIIth legion, under the military tribune Sex. Asellius; and the legatus

of the whole region, Cn. Balbutius, had also come from Calagurris, where the permanent station was.

The cause of the conference was a horror that brooded on the hills. All the townsfolk were frightened, and had begged the presence of a cohort from Calagurris. It was the Terrible Season of the autumn, and the wild people in the mountains were preparing for the frightful ceremonies which only rumour told of in the towns. They were the very old folk who dwelt higher up in the hills and spoke a choppy language which the Vascones could not understand. One seldom saw them; but a few times a year they sent down little yellow, squint-eyed messengers (who looked like Scythians) to trade with the merchants by means of gestures, and every spring and autumn they held the infamous rites on the peaks, their howlings and altar-fires throwing terror into the villages. Always the same—the night before the Kalends of Maius and the night before the Kalends of November. Townsfolk would disappear just before these nights, and would never be heard of again. And there were whispers that the native shepherds and farmers were not ill-disposed toward the very old folk—that more than one thatched hut was vacant before midnight on the two hideous Sabbaths.

This year the horror was very great, for the people knew that the wrath of the very old folk was upon Pompelo. Three months previously

five of the little squint-eyed traders had come down from the hills, and in a market brawl three of them had been killed. The remaining two had gone back wordlessly to their mountains—and this autumn not a single villager had disappeared. There was menace in this immunity. It was not like the very old folk to spare their victims at the Sabbath. It was too good to be normal, and the villagers were afraid.

For many nights there had been a hollow drumming on the hills, and at last the ædile Tib. Annæus Stilpo (half native in blood) had sent to Balbutius at Calagurris for a cohort to stamp out the Sabbath on the terrible night. Balbutius had carelessly refused, on the ground that the villagers' fears were empty, and that the loathsome rites of hill folk were of no concern to the Roman People unless our own citizens were menaced.

I, however, who seemed to be a close friend of Balbutius, had disagreed with him; averring that I had studied deeply in the black forbidden lore, and that I believed the very old folk capable of visiting almost any nameless doom upon the town, which after all was a Roman settlement and contained a great number of our citizens. The complaining ædile's own mother Helvia was a pure Roman, the daughter of M. Helvius Cinna, who had come over with Scipio's army. Accordingly I had sent a slave—a nimble little Greek called

Antipater—to the proconsul with letters, and Scribonius had heeded my plea and ordered Balbutius to send his fifth cohort, under Asellius, to Pompelo; entering the hills at dusk on the eve of November's Kalends and stamping out whatever nameless orgies he might find—bringing such prisoners as he might take to Tarraco for the next proprætor's court. Balbutius, however, had protested, so that more correspondence had ensued. I had written so much to the proconsul that he had become gravely interested, and had resolved to make a personal inquiry into the horror.

He had at length proceeded to Pompelo with his lictors and attendants; there hearing enough rumours to be greatly impressed and disturbed, and standing firmly by his order for the Sabbath's extirpation. Desirous of conferring with one who had studied the subject, he ordered me to accompany Asellius' cohort—and Balbutius had also come along to press his adverse advice, for he honestly believed that drastic military action would stir up a dangerous sentiment of unrest amongst the Vascones both tribal and settled.

So here we all were in the mystic sunset of the autumn hills—old Scribonius Libo in his toga prætexta, the golden light glancing on his shiny bald head and wrinkled hawk face, Balbutius with his gleaming helmet and breastplate, blue-shaven lips compressed in conscientiously dogged opposition, young Asellius

with his polished greaves and superior sneer, and the curious throng of townsfolk, legionaries, tribesmen, peasants, lictors, slaves, and attendants. I myself seemed to wear a common toga, and to have no especially distinguishing characteristic. And everywhere horror brooded. The town and country folk scarcely dared speak aloud, and the men of Libo's entourage, who had been there nearly a week, seemed to have caught something of the nameless dread. Old Scribonius himself looked very grave, and the sharp voices of us later comers seemed to hold something of curious inappropriateness, as in a place of death or the temple of some mystic God.

We entered the prætorium and held grave converse. Balbutius pressed his objections, and was sustained by Asellius, who appeared to hold all the natives in extreme contempt while at the same time deeming it inadvisable to excite them. Both soldiers maintained that we could better afford to antagonise the minority of colonists and civilised natives by inaction, than to antagonise a probable majority of tribesmen and cottagers by stamping out the dread rites.

I, on the other hand, renewed my demand for action, and offered to accompany the cohort on any expedition it might undertake. I pointed out that the barbarous Vascones were at best turbulent and uncertain, so that skirmishes with them were inevitable sooner or later

whichever course we might take; that they had not in the past proved dangerous adversaries to our legions, and that it would ill become the representatives of the Roman People to suffer barbarians to interfere with a course which the justice and prestige of the Republic demanded. That, on the other hand, the successful administration of a province depended primarily upon the safety and good-will of the civilized element in whose hands the local machinery of commerce and prosperity reposed, and in whose veins a large mixture of our own Italian blood coursed. These, though in numbers they might form a minority, were the stable element whose constancy might be relied on, and whose cooperation would most firmly bind the province to the Imperium of the Senate and the Roman People.

It was at once a duty and an advantage to afford them the protection due to Roman citizens; even (and here I shot a sarcastic look at Balbutius and Asellius) at the expense of a little trouble and activity, and of a slight interruption of the draught-playing and cock-fighting at the camp in Calagurris. That the danger to the town and inhabitants of Pompelo was a real one, I could not from my studies doubt. I had read many scrolls out of Syria and Ægyptus, and the cryptic towns of Etruria, and had talked at length with the bloodthirsty priest of Diana Aricina in his temple in the woods

bordering Lacus Nemorensis.

There were shocking dooms that might be called out of the hills on the Sabbaths; dooms which ought not to exist within the territories of the Roman People; and to permit orgies of the kind known to prevail at Sabbaths would be but little in consonance with the customs of those whose forefathers, A. Postumius being consul, had executed so many Roman citizens for the practice of the Bacchanalia—a matter kept ever in memory by the *Senatus Consultum de Bacchanalibus*, graven upon bronze and set open to every eye.

Checked in time, before the progress of the rites might evoke anything with which the iron of a Roman pilum might not be able to deal, the Sabbath would not be too much for the powers of a single cohort. Only participants need be apprehended, and the sparing of a great number of mere spectators would considerably lessen the resentment which any of the sympathising country folk might feel. In short, both principle and policy demanded stern action; and I could not doubt but that Publius Scribonius, bearing in mind the dignity and obligations of the Roman People, would adhere to his plan of despatching the cohort, me accompanying, despite such objections as Balbutius and Asellius—speaking indeed more like provincials than Romans—might see fit to offer and multiply.

The slanting sun was now very

low, and the whole hushed town seemed draped in an unreal and malign glamour. Then P. Scribonius the proconsul signified his approval of my words, and stationed me with the cohort in the provisional capacity of a centurio primipilus; Balbutius and Asellius assenting, the former with better grace than the latter. As twilight fell on the wild autumnal slopes, a measured, hideous beating of strange drums floated down from afar in terrible rhythm. Some few of the legionarii showed timidity, but sharp commands brought them into line, and the whole cohort was soon drawn up on the open plain east of the circus. Libo himself, as well as Balbutius, insisted on accompanying the cohort; but great difficulty was suffered in getting a native guide to point out the paths up the mountain. Finally a young man named Vercellius, the son of pure Roman parents, agreed to take us at least past the foothills.

We began to march in the new dusk, with the thin silver sickle of a young moon trembling over the woods on our left. That which disquieted us most was the fact that the Sabbath was to be held at all. Reports of the coming cohort must have reached the hills, and even the lack of a final decision could not make the rumour less alarming—yet there were the sinister drums as of yore, as if the celebrants had some peculiar reason to be indifferent whether or not the forces of the Roman People marched against

them. The sound grew louder as we entered a rising gap in the hills, steep wooded banks enclosing us narrowly on either side, and displaying curiously fantastic tree-trunks in the light of our bobbing torches.

All were afoot save Libo, Balbutius, Asellius, two or three of the centuriones, and myself, and at length the way became so steep and narrow that those who had horses were forced to leave them; a squad of ten men being left to guard them, though robber bands were not likely to be abroad on such a night of terror. Once in a while it seemed as though we detected a skulking form in the woods nearby, and after a half-hour's climb the steepness and narrowness of the way made the advance of so great a body of men—over 300, all told—exceedingly cumbrous and difficult. Then with utter and horrifying suddenness we heard a frightful sound from below. It was from the tethered horses—they had screamed, not neighed, but screamed... and there was no light down there, nor the sound of any human thing, to show why they had done so. At the same moment bonfires blazed out on all the peaks ahead, so that terror seemed to lurk equally well before and behind us.

Looking for the youth Vercellius, our guide, we found only a crumpled heap weltering in a pool of blood. In his hand was a short sword snatched from the belt of D. Vibulanus, a subcenturio, and on his face was such a look of terror that

the stoutest veterans turned pale at the sight. He had killed himself when the horses screamed... He, who had been born and lived all his life in that region, and knew what men whispered about the hills. All the torches now began to dim, and the cries of frightened legionaries mingled with the unceasing screams of the tethered horses. The air grew perceptibly colder, more suddenly so than is usual at November's brink, and seemed stirred by terrible undulations which I could not help connecting with the beating of huge wings.

The whole cohort now remained at a standstill, and as the torches faded I watched what I thought were fantastic shadows outlined in the sky by the spectral luminosity of the Via Lactea as it flowed through Perseus, Cassiopeia, Cepheus, and Cygnus. Then suddenly all the stars were blotted from the sky— even bright Deneb and Vega ahead, and the lone Altair and Fomalhaut behind us. And as the torches died out altogether, there remained above the stricken and shrieking cohort only the noxious and horrible altar-flames on the towering peaks; hellish and red, and now silhouetting the mad, leaping, and colossal forms of such nameless beasts as had never a Phrygian priest or Campanian grandam whispered of in the wildest of furtive tales.

And above the nighted screaming of men and horses that dæmonic drumming rose to louder

pitch, whilst an ice-cold wind of shocking sentience and deliberateness swept down from those forbidden heights and coiled about each man separately, till all the cohort was struggling and screaming in the dark, as if acting out the fate of Laocoön and his sons. Only old Scribonius Libo seemed resigned. He uttered words amidst the screaming, and they echo still in my ears. "Malitia vetus— malitia vetus est... venit... tandem venit..."

And then I waked. It was the most vivid dream in years, drawing upon wells of the subconscious long untouched and forgotten. Of the fate of that cohort no record exists, but the town at least was saved— for encyclopædias tell of the survival of Pompelo to this day, under the modern Spanish name of Pompelona...

Yrs for Gothick Supremacy—

C. IVLIVS. VERVS.
MAXIMINVS

1928-1929:

ONCE MORE *a* BACHELOR.

[RETURN TO TABLE OF CONTENTS]

For H.P. Lovecraft, 1928 was productive in ways other than the strictly literary. Having now firmly established his home base in Providence, and spent enough time there to feel comfortable in it, he set forth to do a little traveling.

His first destination was New York, at the invitation of his wife, Sonia, who was making one last attempt to reanimate their shambling, undead marriage. Within just a few months, she, too, had given up, and by November was suggesting to Lovecraft that perhaps they should end it with an amicable divorce.

In New York, Lovecraft found the Kalem Club essentially defunct; shorn of its de facto leader by Lovecraft's return to Providence, the

group had faded out. But its members were still around, and Lovecraft had a pretty good time for a month or two before setting out on a lengthy tour of the Eastern Seaboard in the company of various literary friends before returning to Providence to start on *The Dunwich Horror*. Sometime that summer, possibly for the entertainment of his old Kalem Club mates, he dashed off "Ibid," a lighthearted little spoof of an academic paper that's something of classics tour de force.

In 1929, Lovecraft did much more traveling, including a voyage so far afield as Florida, where he drank in the heat like a salamander. He took on several hefty ghost-writing jobs, got paid for one or two of them, also devoted a good deal of

time to production of a lengthy travelogue, “Travels in the Provinces of America”—the first of several such projects that he’d undertake over the next few years. He also, at the very end of the year, took up poetry again for the first time in about 10 years. However, he added nothing to his fiction canon that year.

Lovecraft’s marriage to Sonia officially ended in March of 1929—sort of. Much to her subsequent chagrin, he neglected to file the final decree.

IBID.

[RETURN TO TABLE OF CONTENTS]

“... as *Ibid* says in his famous *Lives of the Poets*.”

—From a student theme.

The erroneous idea that *Ibid* is the author of the *Lives* is so frequently met with, even among those pretending to a degree of culture, that it is worth correcting. It should be a matter of general knowledge that *Cf.* is responsible for this work. *Ibid*’s masterpiece, on the other hand, was the famous *Op. Cit.* wherein all the significant undercurrents of Graeco-Roman expression were crystallised once for all—and with admirable acuteness, notwithstanding the surprisingly late date at which *Ibid* wrote. There is a false report—very commonly reproduced in modern books prior to Von Schweinkopf’s monumental

Geschichte der Ostrogothen in Italien—that *Ibid* was a Romanised Visigoth of Ataulf’s horde who settled in Placentia about 410 A. D. The contrary cannot be too strongly emphasised; for Von Schweinkopf, and since his time Littlewit¹ and Bêtenoir² have shewn with irrefutable force that this strikingly isolated figure was a genuine Roman—or at least as genuine a Roman as that degenerate and mongrelised age could produce—of whom one might well say what Gibbon said of Boethius, “that he was the last whom Cato or Tully could have acknowledged for their countryman.” He was, like Boethius and nearly all the eminent

men of his age, of the great Anician family, and traced his genealogy with much exactitude and self-satisfaction to all the heroes of the republic. His full name—long and pompous according to the custom of an age which had lost the trinomial simplicity of classic Roman nomenclature—is stated by Von Schweinkopf³ to have been Caius Anicius Magnus Furius Camillus Aemilianus Cornelius Valerius Pompeius Julius Ibidus; though Littlewit⁴ rejects Aemilianus and adds Claudius Deciusfunianus; whilst Bêtenoir⁵ differs radically, giving the full name as Magnus Furius Camillus Aurelius Antoninus Flavius Anicius Petronius Valentinianus Aegidus Ibidus.

The eminent critic and biographer was born in the year 486, shortly after the extinction of the Roman rule in Gaul by Clovis. Rome and Ravenna are rivals for the honour of his birth, though it is certain that he received his rhetorical and philosophical training in the schools of Athens—the extent of whose suppression by Theodosius a century before is grossly exaggerated by the superficial. In 512, under the benign rule of the Ostrogoth Theodoric, we behold him as a teacher of rhetoric at Rome, and in 516 he held the consulship together with Pompilius Numantius Bombastes Marcellinus Deodamnatus. Upon the death of Theodoric in 526, Ibidus retired from public life to compose his

celebrated work (whose pure Ciceronian style is as remarkable a case of classic atavism as is the verse of Claudius Claudianus, who flourished a century before Ibidus); but he was later recalled to scenes of pomp to act as court rhetorician for Theodatus, nephew of Theodoric.

Upon the usurpation of Vitiges, Ibidus fell into disgrace and was for a time imprisoned; but the coming of the Byzantine-Roman army under Belisarius soon restored him to liberty and honours. Throughout the siege of Rome he served bravely in the army of the defenders, and afterward followed the eagles of Belisarius to Alba, Porto, and Centumcellae. After the Frankish siege of Milan, Ibidus was chosen to accompany the learned Bishop Datius to Greece, and resided with him at Corinth in the year 539. About 541 he removed to Constantinopolis, where he received every mark of imperial favour both from Justinianus and Justinus the Second. The Emperors Tiberius and Maurice did kindly honour to his old age, and contributed much to his immortality—especially Maurice, whose delight it was to trace his ancestry to old Rome notwithstanding his birth at Arabiscus, in Cappadocia. It was Maurice who, in the poet's 101st year, secured the adoption of his work as a textbook in the schools of the empire, an honour which proved a fatal tax on the aged rhetorician's emotions, since he passed away peacefully at his home near the

church of St. Sophia on the sixth day before the Kalends of September, A. D. 587, in the 102nd year of his age.

His remains, notwithstanding the troubled state of Italy, were taken to Ravenna for interment; but being interred in the suburb of Classe, were exhumed and ridiculed by the Lombard Duke of Spoleto, who took his skull to King Autharis for use as a wassail-bowl. Ibid's skull was proudly handed down from king to king of the Lombard line. Upon the capture of Pavia by Charlemagne in 774, the skull was seized from the tottering Desiderius and carried in the train of the Frankish conqueror. It was from this vessel, indeed, that Pope Leo administered the royal unction which made of the heronomad a Holy Roman Emperor. Charlemagne took Ibid's skull to his capital at Aix, soon afterward presenting it to his Saxon teacher Alcuin, upon whose death in 804 it was sent to Alcuin's kinsfolk in England.

William the Conqueror, finding it in an abbey niche where the pious family of Alcuin had placed it (believing it to be the skull of a saint⁶ who had miraculously annihilated the Lombards by his prayers), did reverence to its osseous antiquity; and even the rough soldiers of Cromwell, upon destroying Ballylough Abbey in Ireland in 1650 (it having been secretly transported thither by a devout Papist in 1539, upon Henry VII's dissolution of the

English monasteries), declined to offer violence to a relic so venerable.

It was captured by the private soldier Read-'em-and-Weep Hopkins, who not long after traded it to Rest-in-Jehovah Stubbs for a quid of new Virginia weed. Stubbs, upon sending forth his son Zerubbabel to seek his fortune in New England in 1661 (for he thought ill of the Restoration atmosphere for a pious young yeoman), gave him St. Ibid's—or rather Brother Ibid's, for he abhorred all that was Popish—skull as a talisman. Upon landing in Salem Zerubbabel set it up in his cupboard beside the chimney, he having built a modest house near the town pump. However, he had not been wholly unaffected by the Restoration influence; and having become addicted to gaming, lost the skull to one Epenetus Dexter, a visiting freeman of Providence.

It was in the house of Dexter, in the northern part of the town near the present intersection of North Main and Olney Streets, on the occasion of Canonchet's raid of March 30, 1676, during King Philip's War; and the astute sachem, recognising it at once as a thing of singular venerableness and dignity, sent it as a symbol of alliance to a faction of the Pequots in Connecticut with whom he was negotiating. On April 4 he was captured by the colonists and soon after executed, but the austere head of Ibid continued on its wanderings.

The Pequots, enfeebled by a previous war, could give the now stricken Narragansetts no assistance; and in 1680 a Dutch furtrader of Albany, Petrus van Schaack, secured the distinguished cranium for the modest sum of two guilders, he having recognised its value from the half-effaced inscription carved in Lombardic minuscules (palaeography, it might be explained, was one of the leading accomplishments of New-Netherland fur-traders of the seventeenth century).

From van Schaack, sad to say, the relic was stolen in 1683 by a French trader, Jean Grenier, whose Popish zeal recognised the features of one whom he had been taught at his mother's knee to revere as St. Ibide. Grenier, fired with virtuous rage at the possession of this holy symbol by a Protestant, crushed van Schaack's head one night with an axe and escaped to the north with his booty; soon, however, being robbed and slain by the half-breed voyageur Michel Savard, who took the skull—despite the illiteracy which prevented his recognising it—to add to a collection of similar but more recent material.

Upon his death in 1701 his half-breed son Pierre traded it among other things to some emissaries of the Sacs and Foxes, and it was found outside the chief's tepee a generation later by Charles de Langlade, founder of the trading post at Green Bay, Wisconsin. De Langlade regarded this sacred object with

proper veneration and ransomed it at the expense of many glass beads; yet after his time it found itself in many other hands, being traded to settlements at the head of Lake Winnebago, to tribes around Lake Mendota, and finally, early in the nineteenth century, to one Solomon Juneau, a Frenchman, at the new trading post of Milwaukee on the Menominee River and the shore of Lake Michigan.

Later traded to Jacques Caboche, another settler, it was in 1850 lost in a game of chess or poker to a newcomer named Hans Zimmerman; being used by him as a beer-stein until one day, under the spell of its contents, he suffered it to roll from his front stoop to the prairie path before his home—where, falling into the burrow of a prairie-dog, it passed beyond his power of discovery or recovery upon his awaking.

So for generations did the sainted skull of Caius Anicius Magnus Furius Camillus Aemilianus Cornelius Valerius Pompeius Julius Ibidus, consul of Rome, favourite of emperors, and saint of the Romish church, lie hidden beneath the soil of a growing town. At first worshipped with dark rites by the prairie-dogs, who saw in it a deity sent from the upper world, it afterward fell into dire neglect as the race of simple, artless burrowers succumbed before the onslaught of the conquering Aryan. Sewers came, but they passed by it. Houses went up—2303 of them, and more—and

at last one fateful night a titan thing occurred. Subtle Nature, convulsed with a spiritual ecstasy, like the froth of that region's quondam beverage, laid low the lofty and heaved high the humble—and behold! In the roseal dawn the burghers of Milwaukee rose to find a former prairie turned to a highland! Vast and far-reaching was the great upheaval. Subterrene arcana, hidden for years, came at last to the light. For there, full in the rifted roadway, lay bleached and tranquil in bland, saintly, and consular pomp the dome-like skull of Ibid!

The DUNWICH HORROR

[RETURN TO TABLE OF CONTENTS]

Gorgons and Hydras, and Chimaeras—dire stories of Celaeno and the Harpies—may reproduce themselves in the brain of superstition—but they were there before. They are transcripts, types—the archetypes are in us, and eternal. How else should the recital of that which we know in a waking sense to be false come to affect us at all? Is it that we naturally conceive terror from such objects, considered in their capacity of being able to inflict upon us bodily injury? O, least of all! These terrors are of older standing. They date beyond body—or without the body, they would have been the same... That the kind of fear here treated is purely spiritual—that it is strong in proportion as it is objectless on earth, that it predominates in the period of our sinless infancy—are difficulties the solution of which might afford some probable insight into our ante-mundane condition, and a peep at least into the shadowland of pre-existence.

—Charles Lamb: *Witches and Other Night-Fears*

I.

When a traveller in north central Massachusetts takes the wrong fork at the junction of Aylesbury pike just beyond Dean's Corners he comes upon a lonely and curious country.

The ground gets higher, and the brier-bordered stone walls press

closer and closer against the ruts of the dusty, curving road. The trees of the frequent forest belts seem too large, and the wild weeds, brambles and grasses attain a luxuriance not often found in settled regions. At the same time the planted fields appear singularly few and barren; while the sparsely scattered houses wear a surprisingly uniform aspect

of age, squalor, and dilapidation.

Without knowing why, one hesitates to ask directions from the gnarled solitary figures spied now and then on crumbling doorsteps or on the sloping, rock-strewn meadows. Those figures are so silent and furtive that one feels somehow confronted by forbidden things, with which it would be better to have nothing to do. When a rise in the road brings the mountains in view above the deep woods, the feeling of strange uneasiness is increased. The summits are too rounded and symmetrical to give a sense of comfort and naturalness, and sometimes the sky silhouettes with especial clearness the queer circles of tall stone pillars with which most of them are crowned.

Gorges and ravines of problematical depth intersect the way, and the crude wooden bridges always seem of dubious safety. When the road dips again there are stretches of marshland that one instinctively dislikes, and indeed almost fears at evening when unseen whippoorwills chatter and the fireflies come out in abnormal profusion to dance to the raucous, creepily insistent rhythms of stridently piping bull-frogs. The thin, shining line of the Miskatonic's upper reaches has an oddly serpent-like suggestion as it winds close to the feet of the domed hills among which it rises.

As the hills draw nearer, one heeds their wooded sides more than their stone-crowned tops. Those

sides loom up so darkly and precipitously that one wishes they would keep their distance, but there is no road by which to escape them. Across a covered bridge one sees a small village huddled between the stream and the vertical slope of Round Mountain, and wonders at the cluster of rotting gambrel roofs bespeaking an earlier architectural period than that of the neighbouring region. It is not reassuring to see, on a closer glance, that most of the houses are deserted and falling to ruin, and that the broken-steeped church now harbours the one slovenly mercantile establishment of the hamlet. One dreads to trust the tenebrous tunnel of the bridge, yet there is no way to avoid it. Once across, it is hard to prevent the impression of a faint, malign odour about the village street, as of the massed mould and decay of centuries. It is always a relief to get clear of the place, and to follow the narrow road around the base of the hills and across the level country beyond till it rejoins the Aylesbury pike. Afterwards one sometimes learns that one has been through Dunwich.

Outsiders visit Dunwich as seldom as possible, and since a certain season of horror all the signboards pointing towards it have been taken down. The scenery, judged by an ordinary aesthetic canon, is more than commonly beautiful; yet there is no influx of artists or summer tourists. Two centuries ago, when talk of witch-blood, Satan-worship,

and strange forest presences was not laughed at, it was the custom to give reasons for avoiding the locality. In our sensible age—since the Dunwich horror of 1928 was hushed up by those who had the town's and the world's welfare at heart—people shun it without knowing exactly why. Perhaps one reason—though it cannot apply to uninformed strangers—is that the natives are now repellently decadent, having gone far along that path of retrogression so common in many New England backwaters. They have come to form a race by themselves, with the well-defined mental and physical stigmata of degeneracy and inbreeding. The average of their intelligence is woefully low, whilst their annals reek of overt viciousness and of half-hidden murders, incests, and deeds of almost unnameable violence and perversity. The old gentry, representing the two or three armigerous families which came from Salem in 1692, have kept somewhat above the general level of decay; though many branches are sunk into the sordid populace so deeply that only their names remain as a key to the origin they disgrace. Some of the Whateleys and Bishops still send their eldest sons to Harvard and Miskatonic, though those sons seldom return to the mouldering gambrel roofs under which they and their ancestors were born.

No one, even those who have the facts concerning the recent horror, can say just what is the matter

with Dunwich; though old legends speak of unhallowed rites and conclaves of the Indians, amidst which they called forbidden shapes of shadow out of the great rounded hills, and made wild orgiastic prayers that were answered by loud crackings and rumblings from the ground below. In 1747 the Reverend Abijah Hoadley, newly come to the Congregational Church at Dunwich Village, preached a memorable sermon on the close presence of Satan and his imps; in which he said:

"It must be allow'd, that these Blasphemies of an infernall Train of Daemons are Matters of too common Knowledge to be deny'd; the cursed Voices of Azazel and Buzrael, of Beelzebub and Belial, being heard now from under Ground by above a Score of credible Witnesses now living. I myself did not more than a Fortnight ago catch a very plain Discourse of evil Powers in the Hill behind my House; wherein there were a Rattling and Rolling, Groaning, Screeching, and Hissing, such as no Things of this Earth could raise up, and which must needs have come from those Caves that only black Magick can discover, and only the Divell unlock."

Mr. Hoadley disappeared soon after delivering this sermon, but the text, printed in Springfield, is still extant. Noises in the hills continued to be reported from year to year, and still form a puzzle to geologists and physiographers.

Other traditions tell of foul

odours near the hill-crowning circles of stone pillars, and of rushing airy presences to be heard faintly at certain hours from stated points at the bottom of the great ravines; while still others try to explain the Devil's Hop Yard—a bleak, blasted hillside where no tree, shrub, or grass-blade will grow. Then, too, the natives are mortally afraid of the numerous whippoorwills which grow vocal on warm nights. It is vowed that the birds are psychopomps lying in wait for the souls of the dying, and that they time their eerie cries in unison with the sufferer's struggling breath. If they can catch the fleeing soul when it leaves the body, they instantly flutter away chittering in daemonic laughter; but if they fail, they subside gradually into a disappointed silence.

These tales, of course, are obsolete and ridiculous; because they come down from very old times. Dunwich is indeed ridiculously old—older by far than any of the communities within thirty miles of it. South of the village one may still spy the cellar walls and chimney of the ancient Bishop house, which was built before 1700; whilst the ruins of the mill at the falls, built in 1806, form the most modern piece of architecture to be seen. Industry did not flourish here, and the nineteenth-century factory movement proved short-lived. Oldest of all are the great rings of rough-hewn stone columns on the hilltops, but these are more generally attributed to the

Indians than to the settlers. Deposits of skulls and bones, found within these circles and around the sizeable table-like rock on Sentinel Hill, sustain the popular belief that such spots were once the burial-places of the Pocumtucks; even though many ethnologists, disregarding the absurd improbability of such a theory, persist in believing the remains Caucasian.

II.

It was in the township of Dunwich, in a large and partly inhabited farmhouse set against a hillside four miles from the village and a mile and a half from any other dwelling, that Wilbur Whateley was born at 5 a.m. on Sunday, the second of February, 1913. This date was recalled because it was Candlemas, which people in Dunwich curiously observe under another name; and because the noises in the hills had sounded, and all the dogs of the countryside had barked persistently, throughout the night before. Less worthy of notice was the fact that the mother was one of the decadent Whateleys, a somewhat deformed, unattractive albino woman of thirty-five, living with an aged and half-insane father about whom the most frightful tales of wizardry had been whispered in his youth. Lavinia Whateley had no known husband, but according to the custom of the

region made no attempt to disavow the child; concerning the other side of whose ancestry the country folk might—and did—speculate as widely as they chose. On the contrary, she seemed strangely proud of the dark, goatish-looking infant who formed such a contrast to her own sickly and pink-eyed albinism, and was heard to mutter many curious prophecies about its unusual powers and tremendous future.

Lavinia was one who would be apt to mutter such things, for she was a lone creature given to wandering amidst thunderstorms in the hills and trying to read the great odorous books which her father had inherited through two centuries of Whateleys, and which were fast falling to pieces with age and wormholes. She had never been to school, but was filled with disjointed scraps of ancient lore that Old Whateley had taught her. The remote farmhouse had always been feared because of Old Whateley's reputation for black magic, and the unexplained death by violence of Mrs Whateley when Lavinia was twelve years old had not helped to make the place popular. Isolated among strange influences, Lavinia was fond of wild and grandiose day-dreams and singular occupations; nor was her leisure much taken up by household cares in a home from which all standards of order and cleanliness had long since disappeared.

There was a hideous screaming

which echoed above even the hill noises and the dogs' barking on the night Wilbur was born, but no known doctor or midwife presided at his coming. Neighbours knew nothing of him till a week afterward, when Old Whateley drove his sleigh through the snow into Dunwich Village and discoursed incoherently to the group of loungers at Osborne's general store. There seemed to be a change in the old man—an added element of furtiveness in the clouded brain which subtly transformed him from an object to a subject of fear—though he was not one to be perturbed by any common family event. Amidst it all he showed some trace of the pride later noticed in his daughter, and what he said of the child's paternity was remembered by many of his hearers years afterward.

"I dun't keer what folks think—ef Lavinny's boy looked like his pa, he wouldn't look like nothin' ye expeck. Ye needn't think the only folks is the folks hereabouts. Lavinny's read some, an' has seed some things the most o'ye only tell abaout. I calc'late her man is as good a husban' as ye kin find this side of Aylesbury; an' ef ye knowed as much abaout the hills as I dew, ye wouldn't ast no better church weddin' nor her'n. Let me tell ye suthin—some day yew folks'll hear a child o' Lavinny's a-callin' its father's name on the top o' Sentinel Hill!"

The only person who saw Wilbur during the first month of his

life were old Zechariah Whateley, of the undecayed Whateleys, and Earl Sawyer's common-law wife, Mamie Bishop. Mamie's visit was frankly one of curiosity, and her subsequent tales did justice to her observations; but Zechariah came to lead a pair of Alderney cows which Old Whateley had bought of his son Curtis. This marked the beginning of a course of cattle-buying on the part of small Wilbur's family which ended only in 1928, when the Dunwich horror came and went; yet at no time did the ramshackle Whateley barn seem overcrowded with livestock. There came a period when people were curious enough to steal up and count the herd that grazed precariously on the steep hillside above the old farmhouse, and they could never find more than ten or twelve anaemic, bloodless-looking specimens. Evidently some blight or distemper, perhaps sprung from the unwholesome pasturage or the diseased fungi and timbers of the filthy barn, caused a heavy mortality amongst the Whateley animals. Odd wounds or sores, having something of the aspect of incisions, seemed to afflict the visible cattle; and once or twice during the earlier months certain callers fancied they could discern similar sores about the throats of the grey, unshaven old man and his slatternly, crinkly-haired albino daughter.

In the spring after Wilbur's birth Lavinia resumed her customary

rambles in the hills, bearing in her misproportioned arms the swarthy child. Public interest in the Whateleys subsided after most of the country folk had seen the baby, and no one bothered to comment on the swift development which that newcomer seemed every day to exhibit. Wilbur's growth was indeed phenomenal, for within three months of his birth he had attained a size and muscular power not usually found in infants under a full year of age. His motions and even his vocal sounds showed a restraint and deliberateness highly peculiar in an infant, and no one was really unprepared when, at seven months, he began to walk unassisted, with falterings which another month was sufficient to remove.

It was somewhat after this time—on Hallowe'en—that a great blaze was seen at midnight on the top of Sentinel Hill where the old table-like stone stands amidst its tumulus of ancient bones. Considerable talk was started when Silas Bishop—of the undecayed Bishops—mentioned having seen the boy running sturdily up that hill ahead of his mother about an hour before the blaze was remarked. Silas was rounding up a stray heifer, but he nearly forgot his mission when he fleetingly spied the two figures in the dim light of his lantern. They darted almost noiselessly through the underbrush, and the astonished watcher seemed to think they were entirely unclothed. Afterwards he

could not be sure about the boy, who may have had some kind of a fringed belt and a pair of dark trunks or trousers on. Wilbur was never subsequently seen alive and conscious without complete and tightly buttoned attire, the disarrangement or threatened disarrangement of which always seemed to fill him with anger and alarm. His contrast with his squalid mother and grandfather in this respect was thought very notable until the horror of 1928 suggested the most valid of reasons.

The next January gossips were mildly interested in the fact that "Lavinny's black brat" had commenced to talk, and at the age of only eleven months. His speech was somewhat remarkable both because of its difference from the ordinary accents of the region, and because it displayed a freedom from infantile lispings of which many children of three or four might well be proud. The boy was not talkative, yet when he spoke he seemed to reflect some elusive element wholly unpossessed by Dunwich and its denizens. The strangeness did not reside in what he said, or even in the simple idioms he used; but seemed vaguely linked with his intonation or with the internal organs that produced the spoken sounds. His facial aspect, too, was remarkable for its maturity; for though he shared his mother's and grandfather's chinlessness, his firm and precociously shaped nose united with the expression of his large, dark, almost Latin eyes to give

1928 • *The* DUNWITCH HORROR

him an air of quasi-adulthood and well-nigh preternatural intelligence. He was, however, exceedingly ugly despite his appearance of brilliancy; there being something almost goatish or animalistic about his thick lips, large-pored, yellowish skin, coarse crinkly hair, and oddly elongated ears. He was soon disliked even more decidedly than his mother and grandsire, and all conjectures about him were spiced with references to the bygone magic of Old Whateley, and how the hills once shook when he shrieked the dreadful name of Yog-Sothoth in the midst of a circle of stones with a great book open in his arms before him. Dogs abhorred the boy, and he was always obliged to take various defensive measures against their barking menace.

III.

Meanwhile Old Whateley continued to buy cattle without measurably increasing the size of his herd. He also cut timber and began to repair the unused parts of his house—a spacious, peak-roofed affair whose rear end was buried entirely in the rocky hillside, and whose three least-ruined ground-floor rooms had always been sufficient for himself and his daughter.

There must have been prodigious reserves of strength in the old man to enable him to accomplish so much hard labour; and though he still babbled dementedly at times,

his carpentry seemed to show the effects of sound calculation. It had already begun as soon as Wilbur was born, when one of the many tool sheds had been put suddenly in order, clapboarded, and fitted with a stout fresh lock. Now, in restoring the abandoned upper storey of the house, he was a no less thorough craftsman. His mania showed itself only in his tight boarding-up of all the windows in the reclaimed section—though many declared that it was a crazy thing to bother with the reclamation at all.

Less inexplicable was his fitting up of another downstairs room for his new grandson—a room which several callers saw, though no one was ever admitted to the closely-boarded upper storey. This chamber he lined with tall, firm shelving, along which he began gradually to arrange, in apparently careful order, all the rotting ancient books and parts of books which during his own day had been heaped promiscuously in odd corners of the various rooms.

“I made some use of ’em,” he would say as he tried to mend a torn black-letter page with paste prepared on the rusty kitchen stove, “but the boy’s fitten to make better use of ’em. He’d orter hev ’em as well so as he kin, for they’re goin’ to be all of his larnin’.”

When Wilbur was a year and seven months old—in September of 1914—his size and accomplishments were almost alarming. He had grown

as large as a child of four, and was a fluent and incredibly intelligent talker. He ran freely about the fields and hills, and accompanied his mother on all her wanderings. At home he would pore diligently over the queer pictures and charts in his grandfather’s books, while Old Whateley would instruct and catechize him through long, hushed afternoons. By this time the restoration of the house was finished, and those who watched it wondered why one of the upper windows had been made into a solid plank door. It was a window in the rear of the east gable end, close against the hill; and no one could imagine why a cleated wooden runway was built up to it from the ground. About the period of this work’s completion people noticed that the old tool-house, tightly locked and windowlessly clapboarded since Wilbur’s birth, had been abandoned again. The door swung listlessly open, and when Earl Sawyer once stepped within after a cattle-selling call on Old Whateley he was quite discomposed by the singular odour he encountered—such a stench, he averred, as he had never before smelt in all his life except near the Indian circles on the hills, and which could not come from anything sane or of this earth. But then, the homes and sheds of Dunwich folk have never been remarkable for olfactory immaculateness.

The following months were void of visible events, save that everyone

swore to a slow but steady increase in the mysterious hill noises. On May Eve of 1915 there were tremors which even the Aylesbury people felt, whilst the following Hallowe’en produced an underground rumbling queerly synchronized with bursts of flame—“them witch Whateleys’ doin’s”—from the summit of Sentinel Hill. Wilbur was growing up uncannily, so that he looked like a boy of ten as he entered his fourth year. He read avidly by himself now; but talked much less than formerly. A settled taciturnity was absorbing him, and for the first time people began to speak specifically of the dawning look of evil in his goatish face. He would sometimes mutter an unfamiliar jargon, and chant in bizarre rhythms which chilled the listener with a sense of unexplainable terror. The aversion displayed towards him by dogs had now become a matter of wide remark, and he was obliged to carry a pistol in order to traverse the countryside in safety. His occasional use of the weapon did not enhance his popularity amongst the owners of canine guardians.

The few callers at the house would often find Lavinia alone on the ground floor, while odd cries and footsteps resounded in the boarded-up second storey. She would never tell what her father and the boy were doing up there, though once she turned pale and displayed an abnormal degree of fear when a jocose fish-pedlar tried the locked

door leading to the stairway. That pedlar told the store loungers at Dunwich Village that he thought he heard a horse stamping on that floor above. The loungers reflected, thinking of the door and runway, and of the cattle that so swiftly disappeared. Then they shuddered as they recalled tales of Old Whateley’s youth, and of the strange things that are called out of the earth when a bullock is sacrificed at the proper time to certain heathen gods. It had for some time been noticed that dogs had begun to hate and fear the whole Whateley place as violently as they hated and feared young Wilbur personally.

In 1917 the war came, and Squire Sawyer Whateley, as chairman of the local draft board, had hard work finding a quota of young Dunwich men fit even to be sent to development camp. The government, alarmed at such signs of wholesale regional decadence, sent several officers and medical experts to investigate; conducting a survey which New England newspaper readers may still recall. It was the publicity attending this investigation which set reporters on the track of the Whateleys, and caused the Boston Globe and Arkham Advertiser to print flamboyant Sunday stories of young Wilbur’s precociousness, Old Whateley’s black magic, and the shelves of strange books, the sealed second storey of the ancient farmhouse, and the weirdness of the whole region

and its hill noises. Wilbur was four and a half then, and looked like a lad of fifteen. His lips and cheeks were fuzzy with a coarse dark down, and his voice had begun to break.

Earl Sawyer went out to the Whateley place with both sets of reporters and camera men, and called their attention to the queer stench which now seemed to trickle down from the sealed upper spaces. It was, he said, exactly like the smell he had found in the toolshed abandoned when the house was finally repaired; and like the faint odours which he sometimes thought he caught near the stone circle on the mountains. Dunwich folk read the stories when they appeared, and grinned over the obvious mistakes. They wondered, too, why the writers made so much of the fact that Old Whateley always paid for his cattle in gold pieces of extremely ancient date. The Whateleys had received their visitors with ill-concealed distaste, though they did not dare court further publicity by a violent resistance or refusal to talk.

IV.

For a decade the annals of the Whateleys sink indistinguishably into the general life of a morbid community used to their queer ways and hardened to their May Eve and All-Hallows orgies. Twice a year they would light fires on the top of Sentinel Hill, at which times the mountain

rumblings would recur with greater and greater violence; while at all seasons there were strange and portentous doings at the lonely farm-house. In the course of time callers professed to hear sounds in the sealed upper storey even when all the family were downstairs, and they wondered how swiftly or how lingeringly a cow or bullock was usually sacrificed. There was talk of a complaint to the Society for the Prevention of Cruelty to Animals but nothing ever came of it, since Dunwich folk are never anxious to call the outside world's attention to themselves.

About 1923, when Wilbur was a boy of ten whose mind, voice, stature, and bearded face gave all the impressions of maturity, a second great siege of carpentry went on at the old house. It was all inside the sealed upper part, and from bits of discarded lumber people concluded that the youth and his grandfather had knocked out all the partitions and even removed the attic floor, leaving only one vast open void between the ground storey and the peaked roof. They had torn down the great central chimney, too, and fitted the rusty range with a flimsy outside tin stove-pipe.

In the spring after this event Old Whateley noticed the growing number of whippoorwills that would come out of Cold Spring Glen to chirp under his window at night. He seemed to regard the circumstance as one of great significance, and told

the loungers at Osborn's that he thought his time had almost come.

"They whistle jest in tune with my breathin' naow," he said, "an' I guess they're gittin' ready to ketch my soul. They know it's a-goin' aout, an' dun't calc'late to miss it. Yew'll know, boys, arter I'm gone, whether they git me er not. Ef they dew, they'll keep up a-singin' an' laffin' till break o' day. Ef they dun't they'll kinder quiet daown like. I expeck them an' the souls they hunts fer hev some pretty tough tussles sometimes."

On Lammas Night, 1924, Dr Houghton of Aylesbury was hastily summoned by Wilbur Whateley, who had lashed his one remaining horse through the darkness and telephoned from Osborn's in the village. He found Old Whateley in a very grave state, with a cardiac action and stentorous breathing that told of an end not far off. The shapeless albino daughter and oddly bearded grandson stood by the bedside, whilst from the vacant abyss overhead there came a disquieting suggestion of rhythmical surging or lapping, as of the waves on some level beach. The doctor, though, was chiefly disturbed by the chattering night birds outside; a seemingly limitless legion of whippoorwills that cried their endless message in repetitions timed diabolically to the wheezing gasps of the dying man. It was uncanny and unnatural—too much, thought Dr Houghton, like the whole of the region he had

entered so reluctantly in response to the urgent call.

Towards one o'clock Old Whateley gained consciousness, and interrupted his wheezing to choke out a few words to his grandson.

"More space, Willy, more space soon. Yew grows—an' that grows faster. It'll be ready to serve ye soon, boy. Open up the gates to Yog-Sothoth with the long chant that ye'll find on page 751 of the complete edition, an' then put a match to the prison. Fire from airth can't burn it nohaow."

He was obviously quite mad. After a pause, during which the flock of whippoorwills outside adjusted their cries to the altered tempo while some indications of the strange hill noises came from afar off, he added another sentence or two.

"Feed it reg'lar, Willy, an' mind the quantity; but dun't let it grow too fast fer the place, fer ef it busts quarters or gits aout afore ye opens to Yog-Sothoth, it's all over an' no use. Only them from beyont kin make it multiply an' work... Only them, the old uns as wants to come back..."

But speech gave place to gasps again, and Lavinia screamed at the way the whippoorwills followed the change. It was the same for more than an hour, when the final throaty rattle came. Dr Houghton drew shrunken lids over the glazing grey eyes as the tumult of birds faded imperceptibly to silence. Lavinia sobbed, but Wilbur only chuckled

whilst the hill noises rumbled faintly. "They didn't git him," he muttered in his heavy bass voice.

Wilbur was by this time a scholar of really tremendous erudition in his one-sided way, and was quietly known by correspondence to many librarians in distant places where rare and forbidden books of old days are kept. He was more and more hated and dreaded around Dunwich because of certain youthful disappearances which suspicion laid vaguely at his door; but was always able to silence inquiry through fear or through use of that fund of old-time gold which still, as in his grandfather's time, went forth regularly and increasingly for cattle-buying. He was now tremendously mature of aspect, and his height, having reached the normal adult limit, seemed inclined to wax beyond that figure. In 1925, when a scholarly correspondent from Miskatonic University called upon him one day and departed pale and puzzled, he was fully six and three-quarters feet tall.

Through all the years Wilbur had treated his half-deformed albino mother with a growing contempt, finally forbidding her to go to the hills with him on May Eve and Hallowmass; and in 1926 the poor creature complained to Mamie Bishop of being afraid of him.

"They's more abaout him as I knows than I kin tell ye, Mamie," she said, "an' naowadays they's more nor what I know myself. I vaow afur

Gawd, I dun't know what he wants nor what he's a-tryin' to dew."

That Hallowe'en the hill noises sounded louder than ever, and fire burned on Sentinel Hill as usual; but people paid more attention to the rhythmical screaming of vast flocks of unnaturally belated whippoorwills which seemed to be assembled near the unlighted Whateley farmhouse. After midnight their shrill notes burst into a kind of pandemoniac cachinnation which filled all the countryside, and not until dawn did they finally quiet down. Then they vanished, hurrying southward where they were fully a month overdue. What this meant, no one could quite be certain till later. None of the countryfolk seemed to have died—but poor Lavinia Whateley, the twisted albino, was never seen again.

In the summer of 1927 Wilbur repaired two sheds in the farmyard and began moving his books and effects out to them. Soon afterwards Earl Sawyer told the loungers at Osborn's that more carpentry was going on in the Whateley farmhouse. Wilbur was closing all the doors and windows on the ground floor, and seemed to be taking out partitions as he and his grandfather had done upstairs four years before. He was living in one of the sheds, and Sawyer thought he seemed unusually worried and tremulous. People generally suspected him of knowing something about his mother's disappearance, and very few ever

approached his neighbourhood now. His height had increased to more than seven feet, and showed no signs of ceasing its development.

V.

The following winter brought an event no less strange than Wilbur's first trip outside the Dunwich region. Correspondence with the Widener Library at Harvard, the Bibliothèque Nationale in Paris, the British Museum, the University of Buenos Ayres, and the Library of Miskatonic University at Arkham had failed to get him the loan of a book he desperately wanted; so at length he set out in person, shabby, dirty, bearded, and uncouth of dialect, to consult the copy at Miskatonic, which was the nearest to him geographically. Almost eight feet tall, and carrying a cheap new valise from Osborne's general store, this dark and goatish gargoyle appeared one day in Arkham in quest of the dreaded volume kept under lock and key at the college library—the hideous *Necronomicon* of the mad Arab Abdul Alhazred in Olaus Wormius' Latin version, as printed in Spain in the seventeenth century. He had never seen a city before, but had no thought save to find his way to the university grounds; where indeed, he passed heedlessly by the great white-fanged watchdog that barked with unnatural fury and

enmity, and tugged frantically at its stout chain.

Wilbur had with him the priceless but imperfect copy of Dr Dee's English version which his grandfather had bequeathed him, and upon receiving access to the Latin copy he at once began to collate the two texts with the aim of discovering a certain passage which would have come on the 751st page of his own defective volume. This much he could not civilly refrain from telling the librarian—the same erudite Henry Armitage (a.m. Miskatonic, Ph.D. Princeton, Litt.D. Johns Hopkins) who had once called at the farm, and who now politely plied him with questions. He was looking, he had to admit, for a kind of formula or incantation containing the frightful name Yog-Sothoth, and it puzzled him to find discrepancies, duplications, and ambiguities which made the matter of determination far from easy. As he copied the formula he finally chose, Dr. Armitage looked involuntarily over his shoulder at the open pages; the left-hand one of which, in the Latin version, contained such monstrous threats to the peace and sanity of the world.

Nor is it to be thought (ran the text as Armitage mentally translated it) that man is either the oldest or the last of earth's masters, or that the common bulk of life and substance walks alone. The Old Ones were, the Old Ones are, and the Old Ones shall be. Not in the spaces we know,

but between them, they walk serene and primal, undimensioned and to us unseen. Yog-Sothoth knows the gate. Yog-Sothoth is the gate. Yog-Sothoth is the key and guardian of the gate. Past, present, future, all are one in Yog-Sothoth. He knows where the Old Ones broke through of old, and where They shall break through again. He knows where They had trod earth's fields, and where They still tread them, and why no one can behold Them as They tread. By Their smell can men sometimes know Them near, but of Their semblance can no man know, saving only in the features of those They have begotten on mankind; and of those are there many sorts, differing in likeness from man's truest eidolon to that shape without sight or substance which is Them. They walk unseen and foul in lonely places where the Words have been spoken and the Rites howled through at their Seasons. The wind gibbers with Their voices, and the earth mutters with Their consciousness. They bend the forest and crush the city, yet may not forest or city behold the hand that smites. Kadath in the cold waste hath known Them, and what man knows Kadath? The ice desert of the South and the sunken isles of Ocean hold stones whereon Their seal is engraved, but who hath seen the deep frozen city or the sealed tower long garlanded with seaweed and barnacles? Great Cthulhu is Their cousin, yet can he spy Them only dimly. Iä! Shub-Niggurath! As a

foulness shall ye know Them. Their hand is at your throats, yet ye see Them not; and Their habitation is even one with your guarded threshold. Yog-Sothoth is the key to the gate, whereby the spheres meet. Man rules now where They ruled once; They shall soon rule where man rules now. After summer is winter, after winter summer. They wait patient and potent, for here shall They reign again.

Dr. Armitage, associating what he was reading with what he had heard of Dunwich and its brooding presences, and of Wilbur Whateley and his dim, hideous aura that stretched from a dubious birth to a cloud of probable matricide, felt a wave of fright as tangible as a draught of the tomb's cold clamminess. The bent, goatish giant before him seemed like the spawn of another planet or dimension; like something only partly of mankind, and linked to black gulfs of essence and entity that stretch like titan phantasms beyond all spheres of force and matter, space and time. Presently Wilbur raised his head and began speaking in that strange, resonant fashion which hinted at sound-producing organs unlike the run of mankind's.

"Mr. Armitage," he said, "I calc'late I've got to take that book home. They's things in it I've got to try under sarten conditions that I can't git here, en' it 'ud be a mortal sin to let a red-tape rule hold me up. Let me take it along, Sir, an' I'll swar

they wun't nobody know the difference. I dun't need to tell ye I'll take good keer of it. It wan't me that put this Dee copy in the shape it is..."

He stopped as he saw firm denial on the librarian's face, and his own goatish features grew crafty. Armitage, half-ready to tell him he might make a copy of what parts he needed, thought suddenly of the possible consequences and checked himself. There was too much responsibility in giving such a being the key to such blasphemous outer spheres. Whateley saw how things stood, and tried to answer lightly.

"Wal, all right, ef ye feel that way abaout it. Maybe Harvard won't be so fussy as yew be.' And without saying more he rose and strode out of the building, stooping at each doorway.

Armitage heard the savage yelping of the great watchdog, and studied Whateley's gorilla-like lope as he crossed the bit of campus visible from the window. He thought of the wild tales he had heard, and recalled the old Sunday stories in the Advertiser; these things, and the lore he had picked up from Dunwich rustics and villagers during his one visit there. Unseen things not of earth—or at least not of tridimensional earth—rushed foetid and horrible through New England's glens, and brooded obscenely on the mountain tops. Of this he had long felt certain. Now he seemed to sense the close presence of some terrible part of the intruding horror, and to

glimpse a hellish advance in the black dominion of the ancient and once passive nightmare. He locked away the Necronomicon with a shudder of disgust, but the room still reeked with an unholy and unidentifiable stench. "As a foulness shall ye know them," he quoted. Yes—the odour was the same as that which had sickened him at the Whateley farmhouse less than three years before. He thought of Wilbur, goatish and ominous, once again, and laughed mockingly at the village rumours of his parentage.

"Inbreeding?" Armitage muttered half-aloud to himself. "Great God, what simpletons! Show them Arthur Machen's Great God Pan and they'll think it a common Dunwich scandal! But what thing—what cursed shapeless influence on or off this three-dimensional earth—was Wilbur Whateley's father? Born on Candlemas—nine months after May Eve of 1912, when the talk about the queer earth noises reached clear to Arkham—what walked on the mountains that May night? What Roodmas horror fastened itself on the world in half-human flesh and blood?"

During the ensuing weeks Dr Armitage set about to collect all possible data on Wilbur Whateley and the formless presences around Dunwich. He got in communication with Dr. Houghton of Aylesbury, who had attended Old Whateley in his last illness, and found much to ponder over in the grandfather's last

words as quoted by the physician. A visit to Dunwich Village failed to bring out much that was new; but a close survey of the *Necronomicon*, in those parts which Wilbur had sought so avidly, seemed to supply new and terrible clues to the nature, methods, and desires of the strange evil so vaguely threatening this planet. Talks with several students of archaic lore in Boston, and letters to many others elsewhere, gave him a growing amazement which passed slowly through varied degrees of alarm to a state of really acute spiritual fear. As the summer drew on he felt dimly that something ought to be done about the lurking terrors of the upper Miskatonic valley, and about the monstrous being known to the human world as Wilbur Whateley.

VI.

The Dunwich horror itself came between Lammas and the equinox in 1928, and Dr. Armitage was among those who witnessed its monstrous prologue. He had heard, meanwhile, of Whateley's grotesque trip to Cambridge, and of his frantic efforts to borrow or copy from the *Necronomicon* at the Widener Library. Those efforts had been in vain, since Armitage had issued warnings of the keenest intensity to all librarians having charge of the dreaded volume. Wilbur had been shockingly nervous at

Cambridge; anxious for the book, yet almost equally anxious to get home again, as if he feared the results of being away long.

Early in August the half-expected outcome developed, and in the small hours of the third Dr. Armitage was awakened suddenly by the wild, fierce cries of the savage watchdog on the college campus. Deep and terrible, the snarling, half-mad growls and barks continued; always in mounting volume, but with hideously significant pauses. Then there rang out a scream from a wholly different throat—such a scream as roused half the sleepers of Arkham and haunted their dreams ever afterwards—such a scream as could come from no being born of earth, or wholly of earth.

Armitage, hastening into some clothing and rushing across the street and lawn to the college buildings, saw that others were ahead of him; and heard the echoes of a burglar-alarm still shrilling from the library. An open window showed black and gaping in the moonlight. What had come had indeed completed its entrance; for the barking and the screaming, now fast fading into a mixed low growling and moaning, proceeded unmistakably from within. Some instinct warned Armitage that what was taking place was not a thing for unfortified eyes to see, so he brushed back the crowd with authority as he unlocked the vestibule door. Among the others he

saw Professor Warren Rice and Dr. Francis Morgan, men to whom he had told some of his conjectures and misgivings; and these two he motioned to accompany him inside. The inward sounds, except for a watchful, droning whine from the dog, had by this time quite subsided; but Armitage now perceived with a sudden start that a loud chorus of whippoorwills among the shrubbery had commenced a damnably rhythmical piping, as if in unison with the last breaths of a dying man.

The building was full of a frightful stench which Dr. Armitage knew too well, and the three men rushed across the hall to the small genealogical reading-room whence the low whining came. For a second nobody dared to turn on the light, then Armitage summoned up his courage and snapped the switch. One of the three—it is not certain which—shrieked aloud at what sprawled before them among disordered tables and overturned chairs. Professor Rice declares that he wholly lost consciousness for an instant, though he did not stumble or fall.

The thing that lay half-bent on its side in a foetid pool of greenish-yellow ichor and tarry stickiness was almost nine feet tall, and the dog had torn off all the clothing and some of the skin. It was not quite dead, but twitched silently and spasmodically while its chest heaved in monstrous unison with the mad piping of the expectant

whippoorwills outside. Bits of shoe-leather and fragments of apparel were scattered about the room, and just inside the window an empty canvas sack lay where it had evidently been thrown. Near the central desk a revolver had fallen, a dented but undischarged cartridge later explaining why it had not been fired. The thing itself, however, crowded out all other images at the time. It would be trite and not wholly accurate to say that no human pen could describe it, but one may properly say that it could not be vividly visualized by anyone whose ideas of aspect and contour are too closely bound up with the common life-forms of this planet and of the three known dimensions. It was partly human, beyond a doubt, with very manlike hands and head, and the goatish, chinless face had the stamp of the Whateley's upon it. But the torso and lower parts of the body were teratologically fabulous, so that only generous clothing could ever have enabled it to walk on earth unchallenged or uneradicated.

Above the waist it was semi-anthropomorphic; though its chest, where the dog's rending paws still rested watchfully, had the leathery, reticulated hide of a crocodile or alligator. The back was piebald with yellow and black, and dimly suggested the squamous covering of certain snakes. Below the waist, though, it was the worst; for here all human resemblance left off and sheer phantasy began. The skin was

thickly covered with coarse black fur, and from the abdomen a score of long greenish-grey tentacles with red sucking mouths protruded limply.

Their arrangement was odd, and seemed to follow the symmetries of some cosmic geometry unknown to earth or the solar system. On each of the hips, deep set in a kind of pinkish, ciliated orbit, was what seemed to be a rudimentary eye; whilst in lieu of a tail there depended a kind of trunk or feeler with purple annular markings, and with many evidences of being an undeveloped mouth or throat. The limbs, save for their black fur, roughly resembled the hind legs of prehistoric earth's giant saurians, and terminated in ridgy-veined pads that were neither hooves nor claws. When the thing breathed, its tail and tentacles rhythmically changed colour, as if from some circulatory cause normal to the non-human greenish tinge, whilst in the tail it was manifest as a yellowish appearance which alternated with a sickly grayish-white in the spaces between the purple rings. Of genuine blood there was none; only the foetid greenish-yellow ichor which trickled along the painted floor beyond the radius of the stickiness, and left a curious discoloration behind it.

As the presence of the three men seemed to rouse the dying thing, it began to mumble without turning or raising its head. Dr. Armitage made no written record of its

mouthings, but asserts confidently that nothing in English was uttered. At first the syllables defied all correlation with any speech of earth, but towards the last there came some disjointed fragments evidently taken from the *Necronomicon*, that monstrous blasphemy in quest of which the thing had perished. These fragments, as Armitage recalls them, ran something like "N'gai, n'gha'ghaa, bugg-shoggog, y'hah: Yog-Sothoth, Yog-Sothoth...." They trailed off into nothingness as the whippoorwills shrieked in rhythmical crescendos of unholy anticipation.

Then came a halt in the gasping, and the dog raised its head in a long, lugubrious howl. A change came over the yellow, goatish face of the prostrate thing, and the great black eyes fell in appallingly. Outside the window the shrilling of the whippoorwills had suddenly ceased, and above the murmurs of the gathering crowd there came the sound of a panic-struck whirring and fluttering. Against the moon vast clouds of feathery watchers rose and raced from sight, frantic at that which they had sought for prey.

All at once the dog started up abruptly, gave a frightened bark, and leaped nervously out of the window by which it had entered. A cry rose from the crowd, and Dr. Armitage shouted to the men outside that no one must be admitted till the police or medical examiner came. He was thankful that the windows were just too high to permit of peering in, and

drew the dark curtains carefully down over each one. By this time two policemen had arrived; and Dr Morgan, meeting them in the vestibule, was urging them for their own sakes to postpone entrance to the stench-filled reading-room till the examiner came and the prostrate thing could be covered up.

Meanwhile frightful changes were taking place on the floor. One need not describe the kind and rate of shrinkage and disintegration that occurred before the eyes of Dr Armitage and Professor Rice; but it is permissible to say that, aside from the external appearance of face and hands, the really human element in Wilbur Whateley must have been very small. When the medical examiner came, there was only a sticky whitish mass on the painted boards, and the monstrous odour had nearly disappeared. Apparently Whateley had had no skull or bony skeleton; at least, in any true or stable sense. He had taken somewhat after his unknown father.

VII.

Yet all this was only the prologue of the actual Dunwich horror. Formalities were gone through by bewildered officials, abnormal details were duly kept from press and public, and men were sent to Dunwich and Aylesbury to look up property and notify any who might be heirs of the late Wilbur

Whateley. They found the countryside in great agitation, both because of the growing rumblings beneath the domed hills, and because of the unwonted stench and the surging, lapping sounds which came increasingly from the great empty shell formed by Whateley's boarded-up farmhouse. Earl Sawyer, who tended the horse and cattle during Wilbur's absence, had developed a woefully acute case of nerves. The officials devised excuses not to enter the noisome boarded place; and were glad to confine their survey of the deceased's living quarters, the newly mended sheds, to a single visit. They filed a ponderous report at the courthouse in Aylesbury, and litigations concerning heirship are said to be still in progress amongst the innumerable Whateleys, decayed and undecayed, of the upper Miskatonic valley.

An almost interminable manuscript in strange characters, written in a huge ledger and adjudged a sort of diary because of the spacing and the variations in ink and penmanship, presented a baffling puzzle to those who found it on the old bureau which served as its owner's desk. After a week of debate it was sent to Miskatonic University, together with the deceased's collection of strange books, for study and possible translation; but even the best linguists soon saw that it was not likely to be unriddled with ease. No trace of the ancient gold with which

Wilbur and Old Whateley had always paid their debts has yet been discovered.

It was in the dark of September ninth that the horror broke loose. The hill noises had been very pronounced during the evening, and dogs barked frantically all night. Early risers on the tenth noticed a peculiar stench in the air. About seven o'clock Luther Brown, the hired boy at George Corey's, between Cold Spring Glen and the village, rushed frenziedly back from his morning trip to Ten-Acre Meadow with the cows. He was almost convulsed with fright as he stumbled into the kitchen; and in the yard outside the no less frightened herd were pawing and lowing pitifully, having followed the boy back in the panic they shared with him. Between gasps Luther tried to stammer out his tale to Mrs Corey.

"Up thar in the rud beyont the glen, Mis' Corey—they's suthin' ben thar! It smells like thunder, an' all the bushes an' little trees is pushed back from the rud like they'd a haouse ben moved along of it. An' that ain't the wust, nuther. They's prints in the rud, Mis' Corey—great raound prints as big as barrel-heads, all sunk daown deep like a elephant had ben along, only they's a sight more nor four feet could make! I looked at one or two afore I run, an' I see every one was covered with lines spreadin' aout from one place, like as if big palm-leaf fans—twict or three times as big as any they

is—hed of ben paounded daown into the rud. An' the smell was awful, like what it is around Wizard Whateley's ol' haouse...."

Here he faltered, and seemed to shiver afresh with the fright that had sent him flying home. Mrs Corey, unable to extract more information, began telephoning the neighbours; thus starting on its rounds the overture of panic that heralded the major terrors. When she got Sally Sawyer, housekeeper at Seth Bishop's, the nearest place to Whateley's, it became her turn to listen instead of transmit; for Sally's boy Chauncey, who slept poorly, had been up on the hill towards Whateley's, and had dashed back in terror after one look at the place, and at the pasturage where Mr. Bishop's cows had been left out all night.

"Yes, Mis' Corey," came Sally's tremulous voice over the party wire, "Cha'ncey he just come back a-postin', and couldn't half talk fer bein' scairt! He says Ol' Whateley's house is all bowed up, with timbers scattered raound like they'd ben dynamite inside; only the bottom floor ain't through, but is all covered with a kind o' tar-like stuff that smells awful an' drips daown offen the aidges onto the graoun' whar the side timbers is blowed away. An' they's awful kinder marks in the yard, tew—great raound marks bigger raound than a hogshhead, an' all sticky with stuff like is on the browed-up haouse. Cha'ncey he says they leads off into the medders, whar a great

swath wider'n a barn is matted daown, an' all the stun walls tumbled every whichway wherever it goes.

"An' he says, says he, Mis' Corey, as haow he sot to look fer Seth's caows, frightened ez he was an' faound'em in the upper pasture nigh the Devil's Hop Yard in an awful shape. Haff on 'em's clean gone, an' nigh haff o' them that's left is sucked most dry o' blood, with sores on 'em like they's ben on Whateleys cattle ever senct Lavinny's black brat was born. Seth he's gone aout naow to look at 'em, though I'll vaow he won't keer ter git very nigh Wizard Whateley's! Cha'ncey didn't look keerful ter see whar the big matted-daown swath led arter it leff the pasturage, but he says he thinks it p'inted towards the glen rud to the village.

"I tell ye, Mis' Corey, they's suthin' abroad as hadn't orter be abroad, an' I for one think that black Wilbur Whateley, as come to the bad end he deserved, is at the bottom of the breedin' of it. He wa'n't all human hisself, I allus says to everybody; an' I think he an' Ol' Whateley must a raised suthin' in that there nailed-up haouse as ain't even so human as he was. They's allus ben unseen things araound Dunwich—livin' things—as ain't human an' ain't good fer human folks.

"The graoun' was a-talkin' las' night, an' towards mornin' Cha'ncey he heered the whippoorwills so laoud in Col' Spring Glen he couldn't sleep nun. Then he thought he

heered another faint-like saound over towards Wizard Whateley's—a kinder rippin' or tearin' o' wood, like some big box er crate was bein' opened fur off. What with this an' that, he didn't git to sleep at all till sunup, an' no sooner was he up this mornin', but he's got to go over to Whateley's an' see what's the matter. He see enough I tell ye, Mis' Corey! This dun't mean no good, an' I think as all the men-folks ought to git up a party an' do suthin'. I know suthin' awful's abaout, an' feel my time is nigh, though only Gawd knows jest what it is.

"Did your Luther take accaount o' whar them big tracks led tew? No? Wal, Mis' Corey, ef they was on the glen rud this side o' the glen, an' ain't got to your haouse yet, I calc'late they must go into the glen itself. They would do that. I allus says Col' Spring Glen ain't no healthy nor decent place. The whippoorwills an' fireflies there never did act like they was creators o' Gawd, an' they's them as says ye kin hear strange things a-rushin' an' a-talkin' in the air daown thar ef ye stand in the right place, atween the rock falls an' Bear's Den."

By that noon fully three-quarters of the men and boys of Dunwich were trooping over the roads and meadows between the newmade Whateley ruins and Cold Spring Glen, examining in horror the vast, monstrous prints, the maimed Bishop cattle, the strange, noisome wreck of the farmhouse, and the bruised, matted vegetation of the

fields and roadside. Whatever had burst loose upon the world had assuredly gone down into the great sinister ravine; for all the trees on the banks were bent and broken, and a great avenue had been gouged in the precipice-hanging underbrush. It was as though a house, launched by an avalanche, had slid down through the tangled growths of the almost vertical slope. From below no sound came, but only a distant, undefinable foetor; and it is not to be wondered at that the men preferred to stay on the edge and argue, rather than descend and beard the unknown Cyclopean horror in its lair. Three dogs that were with the party had barked furiously at first, but seemed cowed and reluctant when near the glen. Someone telephoned the news to the Aylesbury Transcript; but the editor, accustomed to wild tales from Dunwich, did no more than concoct a humorous paragraph about it; an item soon afterwards reproduced by the Associated Press.

That night everyone went home, and every house and barn was barricaded as stoutly as possible. Needless to say, no cattle were allowed to remain in open pasturage. About two in the morning a frightful stench and the savage barking of the dogs awakened the household at Elmer Frye's, on the eastern edge of Cold Spring Glen, and all agreed that they could hear a sort of muffled swishing or lapping sound from somewhere outside. Mrs Frye proposed

telephoning the neighbours, and Elmer was about to agree when the noise of splintering wood burst in upon their deliberations. It came, apparently, from the barn; and was quickly followed by a hideous screaming and stamping amongst the cattle. The dogs slavered and crouched close to the feet of the fear-numbed family. Frye lit a lantern through force of habit, but knew it would be death to go out into that black farmyard. The children and the women-folk whimpered, kept from screaming by some obscure, vestigial instinct of defence which told them their lives depended on silence. At last the noise of the cattle subsided to a pitiful moaning, and a great snapping, crashing, and crackling ensued. The Fries, huddled together in the sitting-room, did not dare to move until the last echoes died away far down in Cold Spring Glen. Then, amidst the dismal moans from the stable and the daemoniac piping of the late whip-poorwills in the glen, Selina Frye tottered to the telephone and spread what news she could of the second phase of the horror.

The next day all the countryside was in a panic; and cowed, uncommunicative groups came and went where the fiendish thing had occurred. Two titan swaths of destruction stretched from the glen to the Frye farmyard, monstrous prints covered the bare patches of ground, and one side of the old red barn had completely caved in. Of

the cattle, only a quarter could be found and identified. Some of these were in curious fragments, and all that survived had to be shot. Earl Sawyer suggested that help be asked from Aylesbury or Arkham, but others maintained it would be of no use. Old Zebulon Whateley, of a branch that hovered about halfway between soundness and decadence, made darkly wild suggestions about rites that ought to be practiced on the hill-tops. He came of a line where tradition ran strong, and his memories of chantings in the great stone circles were not altogether connected with Wilbur and his grandfather.

Darkness fell upon a stricken countryside too passive to organize for real defence. In a few cases closely related families would band together and watch in the gloom under one roof; but in general there was only a repetition of the barricading of the night before, and a futile, ineffective gesture of loading muskets and setting pitchforks handily about. Nothing, however, occurred except some hill noises; and when the day came there were many who hoped that the new horror had gone as swiftly as it had come. There were even bold souls who proposed an offensive expedition down in the glen, though they did not venture to set an actual example to the still reluctant majority.

When night came again the barricading was repeated, though there was less huddling together of

families. In the morning both the Frye and the Seth Bishop households reported excitement among the dogs and vague sounds and stench from afar, while early explorers noted with horror a fresh set of the monstrous tracks in the road skirting Sentinel Hill. As before, the sides of the road showed a bruising indicative of the blasphemously stupendous bulk of the horror; whilst the conformation of the tracks seemed to argue a passage in two directions, as if the moving mountain had come from Cold Spring Glen and returned to it along the same path. At the base of the hill a thirty-foot swath of crushed shrubbery saplings led steeply upwards, and the seekers gasped when they saw that even the most perpendicular places did not deflect the inexorable trail. Whatever the horror was, it could scale a sheer stony cliff of almost complete verticality; and as the investigators climbed round to the hill's summit by safer routes they saw that the trail ended—or rather, reversed—there.

It was here that the Whateleys used to build their hellish fires and chant their hellish rituals by the table-like stone on May Eve and Hallowmass. Now that very stone formed the centre of a vast space thrashed around by the mountainous horror, whilst upon its slightly concave surface was a thick and foetid deposit of the same tarry stickiness observed on the floor of the ruined Whateley farmhouse

when the horror escaped. Men looked at one another and muttered. Then they looked down the hill. Apparently the horror had descended by a route much the same as that of its ascent. To speculate was futile. Reason, logic, and normal ideas of motivation stood confounded. Only old Zebulon, who was not with the group, could have done justice to the situation or suggested a plausible explanation.

Thursday night began much like the others, but it ended less happily. The whippoorwills in the glen had screamed with such unusual persistence that many could not sleep, and about 3 a.m. all the party telephones rang tremulously. Those who took down their receivers heard a fright-mad voice shriek out, "Help, oh, my Gawd!..." and some thought a crashing sound followed the breaking off of the exclamation. There was nothing more. No one dared do anything, and no one knew till morning whence the call came. Then those who had heard it called everyone on the line, and found that only the Fries did not reply. The truth appeared an hour later, when a hastily assembled group of armed men trudged out to the Frye place at the head of the glen. It was horrible, yet hardly a surprise. There were more swaths and monstrous prints, but there was no longer any house. It had caved in like an egg-shell, and amongst the ruins nothing living or dead could be discovered. Only a stench and a tarry

stickiness. The Elmer Fries had been erased from Dunwich.

VIII.

In the meantime a quieter yet even more spiritually poignant phase of the horror had been blackly unwinding itself behind the closed door of a shelf-lined room in Arkham. The curious manuscript record or diary of Wilbur Whateley, delivered to Miskatonic University for translation had caused much worry and bafflement among the experts in language both ancient and modern; its very alphabet, notwithstanding a general resemblance to the heavily-shaded Arabic used in Mesopotamia, being absolutely unknown to any available authority. The final conclusion of the linguists was that the text represented an artificial alphabet, giving the effect of a cipher; though none of the usual methods of cryptographic solution seemed to furnish any clue, even when applied on the basis of every tongue the writer might conceivably have used. The ancient books taken from Whateley's quarters, while absorbingly interesting and in several cases promising to open up new and terrible lines of research among philosophers and men of science, were of no assistance whatever in this matter. One of them, a heavy tome with an iron clasp, was in another unknown alphabet—this

one of a very different cast, and resembling Sanskrit more than anything else. The old ledger was at length given wholly into the charge of Dr. Armitage, both because of his peculiar interest in the Whateley matter, and because of his wide linguistic learning and skill in the mystical formulae of antiquity and the middle ages.

Armitage had an idea that the alphabet might be something esoterically used by certain forbidden cults which have come down from old times, and which have inherited many forms and traditions from the wizards of the Saracenic world. That question, however, he did not deem vital; since it would be unnecessary to know the origin of the symbols if, as he suspected, they were used as a cipher in a modern language. It was his belief that, considering the great amount of text involved, the writer would scarcely have wished the trouble of using another speech than his own, save perhaps in certain special formulae and incantations. Accordingly he attacked the manuscript with the preliminary assumption that the bulk of it was in English.

Dr. Armitage knew, from the repeated failures of his colleagues, that the riddle was a deep and complex one; and that no simple mode of solution could merit even a trial. All through late August he fortified himself with the mass lore of cryptography; drawing upon the fullest resources of his own library, and wading night after night amidst

the arcana of Trithemius' *Poligraphia*, Giambattista Porta's *De Furtivis Literarum Notis*, De Vigenere's *Traite des Chiffres*, Falconer's *Cryptomenysis Patefacta*, Davys' and Thicknesse's eighteenth-century treatises, and such fairly modern authorities as Blair, van Marten and Kluber's script itself, and in time became convinced that he had to deal with one of those subtlest and most ingenious of cryptograms, in which many separate lists of corresponding letters are arranged like the multiplication table, and the message built up with arbitrary key-words known only to the initiated. The older authorities seemed rather more helpful than the newer ones, and Armitage concluded that the code of the manuscript was one of great antiquity, no doubt handed down through a long line of mystical experimenters. Several times he seemed near daylight, only to be set back by some unforeseen obstacle. Then, as September approached, the clouds began to clear. Certain letters, as used in certain parts of the manuscript, emerged definitely and unmistakably; and it became obvious that the text was indeed in English.

On the evening of September 2, the last major barrier gave way, and Dr. Armitage read for the first time a continuous passage of Wilbur Whateley's annals. It was in truth a diary, as all had thought; and it was couched in a style clearly showing the mixed occult erudition and general illiteracy of the strange being

who wrote it. Almost the first long passage that Armitage deciphered, an entry dated November 26, 1916, proved highly startling and disquieting. It was written, he remembered, by a child of three and a half who looked like a lad of twelve or thirteen.

"Today learned the Aklo for the Sabaoth," it ran, "which did not like, it being answerable from the hill and not from the air. That upstairs more ahead of me than I had thought it would be, and is not like to have much earth brain. Shot Elam Hutchins's collie Jack when he went to bite me, and Elam says he would kill me if he dast. I guess he won't. Grandfather kept me saying the Dho formula last night, and I think I saw the inner city at the 2 magnetic poles. I shall go to those poles when the earth is cleared off, if I can't break through with the Dho-Hna formula when I commit it. They from the air told me at Sabbat that it will be years before I can clear off the earth, and I guess grandfather will be dead then, so I shall have to learn all the angles of the planes and all the formulas between the Yr and the Nhhngr. They from outside will help, but they cannot take body without human blood. That upstairs looks it will have the right cast. I can see it a little when I make the Voorish sign or blow the powder of Ibn Ghazi at it, and it is near like them at May Eve on the Hill. The other face may wear off some. I wonder how I shall look when the earth is cleared and there

are no earth beings on it. He that came with the Aklo Sabaoth said I may be transfigured there being much of outside to work on."

Morning found Dr. Armitage in a cold sweat of terror and a frenzy of wakeful concentration. He had not left the manuscript all night, but sat at his table under the electric light turning page after page with shaking hands as fast as he could decipher the cryptic text. He had nervously telephoned his wife he would not be home, and when she brought him a breakfast from the house he could scarcely dispose of a mouthful. All that day he read on, now and then halted maddeningly as a reapplication of the complex key became necessary. Lunch and dinner were brought him, but he ate only the smallest fraction of either. Toward the middle of the next night he drowsed off in his chair, but soon woke out of a tangle of nightmares almost as hideous as the truths and menaces to man's existence that he had uncovered.

On the morning of September fourth Professor Rice and Dr. Morgan insisted on seeing him for a while, and departed trembling and ashen-grey. That evening he went to bed, but slept only fitfully. Wednesday—the next day—he was back at the manuscript, and began to take copious notes both from the current sections and from those he had already deciphered. In the small hours of that night he slept a little in a easy chair in his office, but was

at the manuscript again before dawn. Some time before noon his physician, Dr. Hartwell, called to see him and insisted that he cease work. He refused; intimating that it was of the most vital importance for him to complete the reading of the diary and promising an explanation in due course of time.

That evening, just as twilight fell, he finished his terrible perusal and sank back exhausted. His wife, bringing his dinner, found him in a half-comatose state; but he was conscious enough to warn her off with a sharp cry when he saw her eyes wander toward the notes he had taken. Weakly rising, he gathered up the scribbled papers and sealed them all in a great envelope, which he immediately placed in his inside coat pocket. He had sufficient strength to get home, but was so clearly in need of medical aid that Dr. Hartwell was summoned at once. As the doctor put him to bed he could only mutter over and over again, "But what, in God's name, can we do?"

Dr. Armitage slept, but was partly delirious the next day. He made no explanations to Hartwell, but in his calmer moments spoke of the imperative need of a long conference with Rice and Morgan. His wilder wanderings were very startling indeed, including frantic appeals that something in a boarded-up farmhouse be destroyed, and fantastic references to some plan for the extirpation of the entire human race and all animal and vegetable life

from the earth by some terrible elder race of beings from another dimension. He would shout that the world was in danger, since the Elder Things wished to strip it and drag it away from the solar system and cosmos of matter into some other plane or phase of entity from which it had once fallen, vigintillions of aeons ago. At other times he would call for the dreaded Necronomicon and the Daemonolatrea of Remigius, in which he seemed hopeful of finding some formula to check the peril he conjured up.

"Stop them, stop them!" he would shout. "Those Whateleys meant to let them in, and the worst of all is left! Tell Rice and Morgan we must do something—it's a blind business, but I know how to make the powder... It hasn't been fed since the second of August, when Wilbur came here to his death, and at that rate..."

But Armitage had a sound physique despite his seventy-three years, and slept off his disorder that night without developing any real fever. He woke late Friday, clear of head, though sober with a gnawing fear and tremendous sense of responsibility. Saturday afternoon he felt able to go over to the library and summon Rice and Morgan for a conference, and the rest of that day and evening the three men tortured their brains in the wildest speculation and the most desperate debate. Strange and terrible books were drawn voluminously from the stack

shelves and from secure places of storage; and diagrams and formulae were copied with feverish haste and in bewildering abundance. Of scepticism there was none. All three had seen the body of Wilbur Whateley as it lay on the floor in a room of that very building, and after that not one of them could feel even slightly inclined to treat the diary as a madman's raving.

Opinions were divided as to notifying the Massachusetts State Police, and the negative finally won. There were things involved which simply could not be believed by those who had not seen a sample, as indeed was made clear during certain subsequent investigations. Late at night the conference disbanded without having developed a definite plan, but all day Sunday Armitage was busy comparing formulae and mixing chemicals obtained from the college laboratory. The more he reflected on the hellish diary, the more he was inclined to doubt the efficacy of any material agent in stamping out the entity which Wilbur Whateley had left behind him—the earth threatening entity which, unknown to him, was to burst forth in a few hours and become the memorable Dunwich Horror.

Monday was a repetition of Sunday with Dr. Armitage, for the task in hand required an infinity of research and experiment. Further consultations of the monstrous diary brought about various changes of plan, and he knew that even in the

end a large amount of uncertainty must remain. By Tuesday he had a definite line of action mapped out, and believed he would try a trip to Dunwich within a week. Then, on Wednesday, the great shock came. Tucked obscurely away in a corner of the Arkham Advertiser was a facetious little item from the Associated Press, telling what a record-breaking monster the bootleg whisky of Dunwich had raised up. Armitage, half stunned, could only telephone for Rice and Morgan. Far into the night they discussed, and the next day was a whirlwind of preparation on the part of them all. Armitage knew he would be meddling with terrible powers, yet saw that there was no other way to annul the deeper and more malign meddling which others had done before him.

IX.

Friday morning Armitage, Rice, and Morgan set out by motor for Dunwich, arriving at the village about one in the afternoon. The day was pleasant, but even in the brightest sunlight a kind of quiet dread and portent seemed to hover about the strangely domed hills and the deep, shadowy ravines of the stricken region. Now and then on some mountain top a gaunt circle of stones could be glimpsed against the sky. From the air of hushed fright at Osborn's store they knew

something hideous had happened, and soon learned of the annihilation of the Elmer Frye house and family. Throughout that afternoon they rode around Dunwich, questioning the natives concerning all that had occurred, and seeing for themselves with rising pangs of horror the drear Frye ruins with their lingering traces of the tarry stickiness, the blasphemous tracks in the Frye yard, the wounded Seth Bishop cattle, and the enormous swaths of disturbed vegetation in various places. The trail up and down Sentinel Hill seemed to Armitage of almost cataclysmic significance, and he looked long at the sinister altar-like stone on the summit.

At length the visitors, apprised of a party of State Police which had come from Aylesbury that morning in response to the first telephone reports of the Frye tragedy, decided to seek out the officers and compare notes as far as practicable. This, however, they found more easily planned than performed; since no sign of the party could be found in any direction. There had been five of them in a car, but now the car stood empty near the ruins in the Frye yard. The natives, all of whom had talked with the policemen, seemed at first as perplexed as Armitage and his companions. Then old Sam Hutchins thought of something and turned pale, nudging Fred Farr and pointing to the dank, deep hollow that yawned close by.

"Gawd," he gasped, "I telled 'em not ter go daown into the glen, an' I never thought nobody'd dew it with them tracks an' that smell an' the whippoorwills a-screechin' daown thar in the dark o' noonday..."

A cold shudder ran through natives and visitors alike, and every ear seemed strained in a kind of instinctive, unconscious listening. Armitage, now that he had actually come upon the horror and its monstrous work, trembled with the responsibility he felt to be his. Night would soon fall, and it was then that the mountainous blasphemy lumbered upon its eldritch course. *Negotium perambulans in tenebris...* The old librarian rehearsed the formula he had memorized, and clutched the paper containing the alternative one he had not memorized. He saw that his electric flashlight was in working order. Rice, beside him, took from a valise a metal sprayer of the sort used in combating insects; whilst Morgan uncased the big-game rifle on which he relied despite his colleague's warnings that no material weapon would be of help.

Armitage, having read the hideous diary, knew painfully well what kind of a manifestation to expect; but he did not add to the fright of the Dunwich people by giving any hints or clues. He hoped that it might be conquered without any revelation to the world of the monstrous thing it had escaped. As the shadows gathered, the natives

commenced to disperse homeward, anxious to bar themselves indoors despite the present evidence that all human locks and bolts were useless before a force that could bend trees and crush houses when it chose. They shook their heads at the visitors' plan to stand guard at the Frye ruins near the glen; and, as they left, had little expectancy of ever seeing the watchers again.

There were rumblings under the hills that night, and the whippoorwills piped threateningly. Once in a while a wind, sweeping up out of Cold Spring Glen, would bring a touch of ineffable foetor to the heavy night air; such a foetor as all three of the watchers had smelled once before, when they stood above a dying thing that had passed for fifteen years and a half as a human being. But the looked-for terror did not appear. Whatever was down there in the glen was biding its time, and Armitage told his colleagues it would be suicidal to try to attack it in the dark.

Morning came wanly, and the night-sounds ceased. It was a grey, bleak day, with now and then a drizzle of rain; and heavier and heavier clouds seemed to be piling themselves up beyond the hills to the north-west. The men from Arkham were undecided what to do. Seeking shelter from the increasing rainfall beneath one of the few undestroyed Frye outbuildings, they debated the wisdom of waiting, or of taking the aggressive and going

down into the glen in quest of their nameless, monstrous quarry. The downpour waxed in heaviness, and distant peals of thunder sounded from far horizons. Sheet lightning shimmered, and then a forky bolt flashed near at hand, as if descending into the accursed glen itself. The sky grew very dark, and the watchers hoped that the storm would prove a short, sharp one followed by clear weather.

It was still gruesomely dark when, not much over an hour later, a confused babel of voices sounded down the road. Another moment brought to view a frightened group of more than a dozen men, running, shouting, and even whimpering hysterically. Someone in the lead began sobbing out words, and the Arkham men started violently when those words developed a coherent form.

"Oh, my Gawd, my Gawd," the voice choked out. "It's a-goin' agin, an' this time by day! It's aout—it's aout an' a-movin' this very minute, an' only the Lord knows when it'll be on us all!"

The speaker panted into silence, but another took up his message.

"Nigh on a haour ago Zeb Whateley here heered the 'phone a-ringin', an' it was Mis' Corey, George's wife, that lives daown by the junction. She says the hired boy Luther was aout drivin' in the caows from the storm arter the big bolt, when he see all the trees a-bendin' at the maouth o' the glen—opposite

side ter this—an' smelt the same awful smell like he smelt when he faound the big tracks las' Monday mornin'. An' she says he says they was a swishin' lappin' saound, more nor what the bendin' trees an' bushes could make, an' all on a suddent the trees along the rud begun ter git pushed one side, an' they was a awful stompin' an' splashin' in the mud. But mind ye, Luther he didn't see nothin' at all, only just the bendin' trees an' underbrush.

"Then fur ahead where Bishop's Brook goes under the rud he heerd a awful creakin' an' strainin' on the bridge, an' says he could tell the saound o' wood a-startin' to crack an' split. An' all the whiles he never see a thing, only them trees an' bushes a-bendin'. An' when the swishin' saound got very fur off—on the rud towards Wizard Whateley's an' Sentinel Hill—Luther he had the guts ter step up whar he'd heerd it fust an' look at the graound. It was all mud an' water, an' the sky was dark, an' the rain was wipin' aout all tracks abaout as fast as could be; but beginnin' at the glen maouth, whar the trees hed moved, they was still some o' them awful prints big as bar'ls like he seen Monday."

At this point the first excited speaker interrupted.

"But that ain't the trouble naow—that was only the start. Zeb here was callin' folks up an' everybody was a-listenin' in when a call from Seth Bishop's cut in. His haouse-keeper Sally was carryin' on fit to

kill—she'd jest seed the trees a-bendin' beside the rud, an' says they was a kind o' mushy saound, like a elephant puffin' an' treadin', a-headin' fer the haouse. Then she up an' spoke suddent of a fearful smell, an' says her boy Cha'ncey was a-screamin' as haow it was jest like what he smelt up to the Whateley rewins Monday mornin'. An' the dogs was barkin' an' whinin' awful.

"An' then she let aout a turrible yell, an' says the shed daown the rud had jest caved in like the storm hed blowed it over, only the wind w'an't strong enough to dew that. Everybody was a-listenin', an' we could hear lots o' folks on the wire a-gaspin'. All to onct Sally she yelled again, an' says the front yard picket fence hed just crumbled up, though they wa'n't no sign o' what done it. Then everybody on the line could hear Cha'ncey an' old Seth Bishop a-yellin' tew, an' Sally was shriekin' aout that suthin' heavy hed struck the haouse—not lightnin' nor nothin', but suthin' heavy again' the front, that kep' a-launchin' itself agin an' agin, though ye couldn't see nothin' aout the front winders. An' then... an' then..."

Lines of fright deepened on every face; and Armitage, shaken as he was, had barely poise enough to prompt the speaker.

"An' then... Sally she yelled aout, 'O help, the haouse is a-cavin' in... an' on the wire we could hear a turrible crashin' an' a hull flock o' screaming... jes like when Elmer

Frye's place was took, only wuss..."

The man paused, and another of the crowd spoke.

"That's all—not a saound nor squeak over the 'phone arter that. Jest still-like. We that heerd it got aout Fords an' wagons an' rounded up as many able-bodied men-folks as we could git, at Corey's place, an' come up here ter see what yew thought best ter dew. Not but what I think it's the Lord's judgment fer our iniquities, that no mortal kin ever set aside."

Armitage saw that the time for positive action had come, and spoke decisively to the faltering group of frightened rustics.

"We must follow it, boys." He made his voice as reassuring as possible. "I believe there's a chance of putting it out of business. You men know that those Whateleys were wizards—well, this thing is a thing of wizardry, and must be put down by the same means. I've seen Wilbur Whateley's diary and read some of the strange old books he used to read; and I think I know the right kind of spell to recite to make the thing fade away. Of course, one can't be sure, but we can always take a chance. It's invisible—I knew it would be—but there's powder in this long-distance sprayer that might make it show up for a second. Later on we'll try it. It's a frightful thing to have alive, but it isn't as bad as what Wilbur would have let in if he'd lived longer. You'll never know what the world escaped. Now we've

only this one thing to fight, and it can't multiply. It can, though, do a lot of harm; so we mustn't hesitate to rid the community of it.

"We must follow it—and the way to begin is to go to the place that has just been wrecked. Let somebody lead the way—I don't know your roads very well, but I've an idea there might be a shorter cut across lots. How about it?"

The men shuffled about a moment, and then Earl Sawyer spoke softly, pointing with a grimy finger through the steadily lessening rain.

"I guess ye kin git to Seth Bishop's quickest by cuttin' across the lower medder here, wadin' the brook at the low place, an' climbin' through Carrier's mowin' an' the timber-lot beyont. That comes aout on the upper rud mighty nigh Seth's—a leetle t'other side."

Armitage, with Rice and Morgan, started to walk in the direction indicated; and most of the natives followed slowly. The sky was growing lighter, and there were signs that the storm had worn itself away. When Armitage inadvertently took a wrong direction, Joe Osborn warned him and walked ahead to show the right one. Courage and confidence were mounting, though the twilight of the almost perpendicular wooded hill which lay towards the end of their short cut, and among whose fantastic ancient trees they had to scramble as if up a ladder, put these qualities to a severe test.

At length they emerged on a muddy road to find the sun coming out. They were a little beyond the Seth Bishop place, but bent trees and hideously unmistakable tracks showed what had passed by. Only a few moments were consumed in surveying the ruins just round the bend. It was the Frye incident all over again, and nothing dead or living was found in either of the collapsed shells which had been the Bishop house and barn. No one cared to remain there amidst the stench and tarry stickiness, but all turned instinctively to the line of horrible prints leading on towards the wrecked Whateley farmhouse and the altar-crowned slopes of Sentinel Hill.

As the men passed the site of Wilbur Whateley's abode they shuddered visibly, and seemed again to mix hesitancy with their zeal. It was no joke tracking down something as big as a house that one could not see, but that had all the vicious malevolence of a daemon. Opposite the base of Sentinel Hill the tracks left the road, and there was a fresh bending and matting visible along the broad swath marking the monster's former route to and from the summit.

Armitage produced a pocket telescope of considerable power and scanned the steep green side of the hill. Then he handed the instrument to Morgan, whose sight was keener. After a moment of gazing Morgan cried out sharply, passing the glass to Earl Sawyer and indicating a

certain spot on the slope with his finger. Sawyer, as clumsy as most non-users of optical devices are, fumbled a while; but eventually focused the lenses with Armitage's aid. When he did so his cry was less restrained than Morgan's had been.

"Gawd almighty, the grass an' bushes is a'movin'! It's a-goin' up—slow-like—creepin'—up ter the top this minute, heaven only knows what fur!"

Then the germ of panic seemed to spread among the seekers. It was one thing to chase the nameless entity, but quite another to find it. Spells might be all right—but suppose they weren't? Voices began questioning Armitage about what he knew of the thing, and no reply seemed quite to satisfy. Everyone seemed to feel himself in close proximity to phases of Nature and of being utterly forbidden and wholly outside the sane experience of mankind.

X.

In the end the three men from Arkham—old, white-bearded Dr. Armitage, stocky, iron-grey Professor Rice, and lean, youngish Dr. Morgan, ascended the mountain alone. After much patient instruction regarding its focusing and use, they left the telescope with the frightened group that remained in the road; and as they climbed they were watched closely by those among whom the glass was passed

round. It was hard going, and Armitage had to be helped more than once. High above the toiling group the great swath trembled as its hellish maker repassed with snail-like deliberateness. Then it was obvious that the pursuers were gaining.

Curtis Whateley—of the undecayed branch—was holding the telescope when the Arkham party detoured radically from the swath. He told the crowd that the men were evidently trying to get to a subordinate peak which overlooked the swath at a point considerably ahead of where the shrubbery was now bending. This, indeed, proved to be true; and the party were seen to gain the minor elevation only a short time after the invisible blasphemy had passed it.

Then Wesley Corey, who had taken the glass, cried out that Armitage was adjusting the sprayer which Rice held, and that something must be about to happen. The crowd stirred uneasily, recalling that his sprayer was expected to give the unseen horror a moment of visibility. Two or three men shut their eyes, but Curtis Whateley snatched back the telescope and strained his vision to the utmost. He saw that Rice, from the party's point of advantage above and behind the entity, had an excellent chance of spreading the potent powder with marvellous effect.

Those without the telescope saw only an instant's flash of grey

cloud—a cloud about the size of a moderately large building—near the top of the mountain. Curtis, who held the instrument, dropped it with a piercing shriek into the ankle-deep mud of the road. He reeled, and would have crumbled to the ground had not two or three others seized and steadied him. All he could do was moan half-inaudibly.

"Oh, oh, great Gawd... that... that..."

There was a pandemonium of questioning, and only Henry Wheeler thought to rescue the fallen telescope and wipe it clean of mud. Curtis was past all coherence, and even isolated replies were almost too much for him.

"Bigger'n a barn... all made o' squirmen' ropes... hull thing sort o' shaped like a hen's egg bigger'n anything with dozens o' legs like hogs-heads that haff shut up when they step... nothin' solid ababout it—all like jelly, an' made o' sep'rit wriglin' ropes pushed clost together... great bulgin' eyes all over it... ten or twenty maouths or trunks a-stickin' aout all along the sides, big as stove-pipes an all a-tossin' an openin' an' shuttin'... all grey, with kinder blue or purple rings... an' Gawd it Heaven—that haff face on top..."

This final memory, whatever it was, proved too much for poor Curtis; and he collapsed completely before he could say more. Fred Farr and Will Hutchins carried him to the roadside and laid him on the damp grass. Henry Wheeler,

trembling, turned the rescued telescope on the mountain to see what he might. Through the lenses were discernible three tiny figures, apparently running towards the summit as fast as the steep incline allowed. Only these—nothing more. Then everyone noticed a strangely unseasonable noise in the deep valley behind, and even in the underbrush of Sentinel Hill itself. It was the piping of unnumbered whippoorwills, and in their shrill chorus there seemed to lurk a note of tense and evil expectancy.

Earl Sawyer now took the telescope and reported the three figures as standing on the topmost ridge, virtually level with the altar-stone but at a considerable distance from it. One figure, he said, seemed to be raising its hands above its head at rhythmic intervals; and as Sawyer mentioned the circumstance the crowd seemed to hear a faint, half-musical sound from the distance, as if a loud chant were accompanying the gestures. The weird silhouette on that remote peak must have been a spectacle of infinite grotesqueness and impressiveness, but no observer was in a mood for aesthetic appreciation. "I guess he's sayin' the spell," whispered Wheeler as he snatched back the telescope. The whippoorwills were piping wildly, and in a singularly curious irregular rhythm quite unlike that of the visible ritual.

Suddenly the sunshine seemed to lessen without the intervention

of any discernible cloud. It was a very peculiar phenomenon, and was plainly marked by all. A rumbling sound seemed brewing beneath the hills, mixed strangely with a concordant rumbling which clearly came from the sky. Lightning flashed aloft, and the wondering crowd looked in vain for the portents of storm. The chanting of the men from Arkham now became unmistakable, and Wheeler saw through the glass that they were all raising their arms in the rhythmic incantation. From some farmhouse far away came the frantic barking of dogs.

The change in the quality of the daylight increased, and the crowd gazed about the horizon in wonder. A purplish darkness, born of nothing more than a spectral deepening of the sky's blue, pressed down upon the rumbling hills. Then the lightning flashed again, somewhat brighter than before, and the crowd fancied that it had showed a certain mistiness around the altar-stone on the distant height. No one, however, had been using the telescope at that instant. The whippoorwills continued their irregular pulsation, and the men of Dunwich braced themselves tensely against some imponderable menace with which the atmosphere seemed surcharged.

Without warning came those deep, cracked, raucous vocal sounds which will never leave the memory of the stricken group who heard them. Not from any human throat were they born, for the organs of

man can yield no such acoustic perversions. Rather would one have said they came from the pit itself, had not their source been so unmis-takably the altar-stone on the peak. It is almost erroneous to call them sounds at all, since so much of their ghastly, infra-bass timbre spoke to dim seats of consciousness and terror far subtler than the ear; yet one must do so, since their form was indisputably though vaguely that of half-articulate words. They were loud—loud as the rumblings and the thunder above which they echoed—yet did they come from no visible being. And because imagination might suggest a conjectural source in the world of non-visible beings, the huddled crowd at the mountain's base huddled still closer, and winced as if in expectation of a blow.

"Ygnailh... ygnaiih... thflth-kh'ngha... Yog-Sothoth..." rang the hideous croaking out of space. "Y'bthnk... h'ehye—n'grkd'l'h..."

The speaking impulse seemed to falter here, as if some frightful psychic struggle were going on. Henry Wheeler strained his eye at the telescope, but saw only the three grotesquely silhouetted human figures on the peak, all moving their arms furiously in strange gestures as their incantation drew near its culmination. From what black wells of Acherontic fear or feeling, from what unplumbed gulfs of extra-cosmic consciousness or obscure, long-latent heredity, were those half-articulate thunder-croakings

drawn? Presently they began to gather renewed force and coherence as they grew in stark, utter, ultimate frenzy.

"E h - y - y a - y a - y a h a a h — e'yayayaaaa... ngh'aaaa... ngh'aaa... h'yuh... h'yuh... HELP! HELP!... ff—ff—ff—FATHER! FATHER! YOG-SOTHOTH!..."

But that was all. The pallid group in the road, still reeling at the indisputably English syllables that had poured thickly and thunderously down from the frantic vacancy beside that shocking altar-stone, were never to hear such syllables again. Instead, they jumped violently at the terrific report which seemed to rend the hills; the deafening, cataclysmic peal whose source, be it inner earth or sky, no hearer was ever able to place. A single lightning bolt shot from the purple zenith to the altar-stone, and a great tidal wave of viewless force and indescribable stench swept down from the hill to all the countryside. Trees, grass, and under-brush were whipped into a fury; and the frightened crowd at the mountain's base, weakened by the lethal foetor that seemed about to asphyxiate them, were almost hurled off their feet. Dogs howled from the distance, green grass and foliage wilted to a curious, sickly yellow-grey, and over field and forest were scattered the bodies of dead whippoorwills.

The stench left quickly, but the vegetation never came right again. To this day

there is something queer and unholy about the growths on and around that fearsome hill. Curtis Whateley was only just regaining consciousness when the Arkham men came slowly down the mountain in the beams of a sunlight once more brilliant and untainted. They were grave and quiet, and seemed shaken by memories and reflections even more terrible than those which had reduced the group of natives to a state of cowed quivering. In reply to a jumble of questions they only shook their heads and reaffirmed one vital fact.

"The thing has gone for ever," Armitage said. "It has been split up into what it was originally made of, and can never exist again. It was an impossibility in a normal world. Only the least fraction was really matter in any sense we know. It was like its father—and most of it has gone back to him in some vague realm or dimension outside our material universe; some vague abyss out of which only the most accursed rites of human blasphemy could ever have called him for a moment on the hills."

There was a brief silence, and in that pause the scattered senses of poor Curtis Whateley began to knit back into a sort of continuity; so that he put his hands to his head with a moan. Memory seemed to pick itself up where it had left off, and the horror of the sight that had prostrated him burst in upon him again.

"Oh, oh, my Gawd, that haff

face—that haff face on top of it... that face with the red eyes an' crinkly albino hair, an' no chin, like the Whateleys... It was a octopus, centipede, spider kind o' thing, but they was a haff-shaped man's face on top of it, an' it looked like Wizard Whateley's, only it was yards an' yards acrost..."

He paused exhausted, as the whole group of natives stared in a bewilderment not quite crystallized into fresh terror. Only old Zebulon Whateley, who wanderingly remembered ancient things but who had been silent heretofore, spoke aloud.

"Fifteen year' gone," he rambled, "I heered Ol' Whateley say as haow some day we'd hear a child o' Lavinny's a-callin' its father's name on the top o' Sentinel Hill..."

But Joe Osborn interrupted him to question the Arkham men anew.

"What was it, anyhaow, an' haowever did young Wizard Whateley call it aout o' the air it come from?"

Armitage chose his words very carefully.

"It was—well, it was mostly a kind of force that doesn't belong in our part of space; a kind of force that acts and grows and shapes itself by other laws than those of our sort of Nature. We have no business calling in such things from outside, and only very wicked people and very wicked cults ever try to. There was some of it in Wilbur Whateley himself—enough to make a devil and a precocious monster of him, and to make

his passing out a pretty terrible sight. I'm going to burn his accursed diary, and if you men are wise you'll dynamite that altar-stone up there, and pull down all the rings of standing stones on the other hills. Things like that brought down the beings those Whateleys were so fond of—the beings they were going to let in tangibly to wipe out the human race and drag the earth off to some nameless place for some nameless purpose.

“But as to this thing we've just sent back—the Whateleys raised it for a terrible part in the doings that were to come. It grew fast and big from the same reason that Wilbur grew fast and big—but it beat him because it had a greater share of the outsideness in it. You needn't ask how Wilbur called it out of the air. He didn't call it out. It was his twin brother, but it looked more like the father than he did.”

1930:

The TRAVELER *from* PROVIDENCE.

[RETURN TO TABLE OF CONTENTS]

In 1930, H.P. Lovecraft continued relatively happily in the path he had followed since leaving New York. There was never any question of him moving away from Providence now; he declined several such offers, one of which (in 1928) had come from his own wife. But he was now far from reclusive. The small income he received from his dwindling inheritance and from stingy editors and reluctant ghost-writing clients would be saved carefully away for bus and train fare; then he would sally forth on excursions to visit literary friends who, knowing his straitened circumstances, would put him up, feed him, and take him on tours of local scenery. Then he would spend a few months writing a lengthy

travelogue to commemorate his journey.

In addition to the travelogue, Lovecraft continued with the outburst of poetry that he'd started in 1929. The most well known of these works was a sonnet sequence titled *Fungi from Yuggoth*. His ghost-writing job yielded one of the best of his collaborative works, “The Mound”—which, as was customary, ran under the by-line of his client, Zealia Bishop. As a ghostwritten project, it's not included in this collection, but is well worth the looking-up.

Lovecraft contributed only one work to his canon in 1930, but it's rather a big one: *The Whisperer in Darkness*, a 26,000-word novella that blurs the line between and among

weird fiction, dark fantasy and science fiction, and which takes greater advantage of the Cthulhu Mythos than anything before. Clark Ashton Smith is incorporated into it as an Atlantean priest (“Klarkash-Ton”), as is his toad-god Tsothoggua; August Derleith becomes “M. le Comte d’Erlette,” the author of the dread tome *Cultes des Goules*. The Cthulhu Mythos was starting to take shape as a real shared science-fiction universe from which Lovecraft and his friends could draw characters and references to enhance the realism of their weird tales.

Summer of 1930 is also the time when Lovecraft started corresponding with fellow *Weird Tales* regular Robert E. Howard, a prolific and fairly successful weird-poetry and fiction writer who’s known today as one of the “Three Musketeers of *Weird Tales*” (the other two being Lovecraft and Clark Ashton Smith). Howard, who is best known for his Conan the Barbarian stories, would soon be contributing his own derivative content to Lovecraft’s great spooky Cthulhu sandbox. For years it has been fashionable, in certain circles, to regard Howard as something of a hack, dashing out pastiches of Lovecraft under the Great One’s mentorship, perhaps because of the undeserved low-brow “grunt-fiction” reputation of the Conan stories; this attitude, when encountered, is a sure sign of an incomplete familiarity with one or both authors.

After *The Whisperer in Darkness*

was complete, Lovecraft spent the last several months of 1930 hammering out a 75,000-word travelogue of Quebec, solely for his own amusement—basically, it was a novel-length travel journal.

The WHISPERER *in* DARKNESS.

[RETURN TO TABLE OF CONTENTS]

I.

Bear in mind closely that I did not see any actual visual horror at the end. To say that a mental shock was the cause of what I inferred—that last straw which sent me racing out of the lonely Akeley farmhouse and through the wild domed hills of Vermont in a commandeered motor at night—is to ignore the plainest facts of my final experience. Notwithstanding the deep things I saw and heard, and the admitted vividness of the impression produced on me by these things, I cannot prove even now whether I was right or wrong in my hideous inference. For after all Akeley’s disappearance establishes

nothing. People found nothing amiss in his house despite the bullet-marks on the outside and inside. It was just as though he had walked out casually for a ramble in the hills and failed to return. There was not even a sign that a guest had been there, or that those horrible cylinders and machines had been stored in the study. That he had mortally feared the crowded green hills and endless trickle of brooks among which he had been born and reared, means nothing at all, either; for thousands are subject to just such morbid fears. Eccentricity, moreover, could easily account for his strange acts and apprehensions toward the last.

The whole matter began, so far as I am concerned, with the historic

and unprecedented Vermont floods of November 3, 1927. I was then, as now, an instructor of literature at Miskatonic University in Arkham, Massachusetts, and an enthusiastic amateur student of New England folklore. Shortly after the flood, amidst the varied reports of hardship, suffering, and organized relief which filled the press, there appeared certain odd stories of things found floating in some of the swollen rivers; so that many of my friends embarked on curious discussions and appealed to me to shed what light I could on the subject. I felt flattered at having my folklore study taken so seriously, and did what I could to belittle the wild, vague tales which seemed so clearly an outgrowth of old rustic superstitions. It amused me to find several persons of education who insisted that some stratum of obscure, distorted fact might underlie the rumors.

The tales thus brought to my notice came mostly through newspaper cuttings; though one yarn had an oral source and was repeated to a friend of mine in a letter from his mother in Hardwick, Vermont. The type of thing described was essentially the same in all cases, though there seemed to be three separate instances involved—one connected with the Winooski River near Montpelier, another attached to the West River in Windham County beyond Newfane, and a third centering in the Passumpsic in Caledonia County above

Lyndonville. Of course many of the stray items mentioned other instances, but on analysis they all seemed to boil down to these three. In each case country folk reported seeing one or more very bizarre and disturbing objects in the surging waters that poured down from the unfrequented hills, and there was a widespread tendency to connect these sights with a primitive, half-forgotten cycle of whispered legend which old people resurrected for the occasion.

What people thought they saw were organic shapes not quite like any they had ever seen before. Naturally, there were many human bodies washed along by the streams in that tragic period; but those who described these strange shapes felt quite sure that they were not human, despite some superficial resemblances in size and general outline. Nor, said the witnesses, could they have been any kind of animal known to Vermont. They were pinkish things about five feet long; with crustaceous bodies bearing vast pairs of dorsal fins or membranous wings and several sets of articulated limbs, and with a sort of convoluted ellipsoid, covered with multitudes of very short antennae, where a head would ordinarily be. It was really remarkable how closely the reports from different sources tended to coincide; though the wonder was lessened by the fact that the old legends, shared at one time throughout the hill country, furnished a morbidly vivid

picture which might well have coloured the imaginations of all the witnesses concerned. It was my conclusion that such witnesses—in every case naive and simple backwoods folk—had glimpsed the battered and bloated bodies of human beings or farm animals in the whirling currents; and had allowed the half-remembered folklore to invest these pitiful objects with fantastic attributes.

The ancient folklore, while cloudy, evasive, and largely forgotten by the present generation, was of a highly singular character, and obviously reflected the influence of still earlier Indian tales. I knew it well, though I had never been in Vermont, through the exceedingly rare monograph of Eli Davenport, which embraces material orally obtained prior to 1839 among the oldest people of the state. This material, moreover, closely coincided with tales which I had personally heard from elderly rustics in the mountains of New Hampshire. Briefly summarized, it hinted at a hidden race of monstrous beings which lurked somewhere among the remoter hills—in the deep woods of the highest peaks, and the dark valleys where streams trickle from unknown sources. These beings were seldom glimpsed, but evidences of their presence were reported by those who had ventured farther than usual up the slopes of certain mountains or into certain deep, steep-sided gorges that even the wolves shunned.

There were queer footprints or claw-prints in the mud of brook-margins and barren patches, and curious circles of stones, with the grass around them worn away, which did not seem to have been placed or entirely shaped by Nature. There were, too, certain caves of problematical depth in the sides of the hills; with mouths closed by boulders in a manner scarcely accidental, and with more than an average quota of the queer prints leading both toward and away from them—if indeed the direction of these prints could be justly estimated. And worst of all, there were the things which adventurous people had seen very rarely in the twilight of the remotest valleys and the dense perpendicular woods above the limits of normal hill-climbing.

It would have been less uncomfortable if the stray accounts of these things had not agreed so well. As it was, nearly all the rumors had several points in common; averring that the creatures were a sort of huge, light-red crab with many pairs of legs and with two great batlike wings in the middle of the back. They sometimes walked on all their legs, and sometimes on the hindmost pair only, using the others to convey large objects of indeterminate nature. On one occasion they were spied in considerable numbers, a detachment of them wading along a shallow woodland watercourse three abreast in evidently disciplined formation. Once a specimen was seen

flying—launching itself from the top of a bald, lonely hill at night and vanishing in the sky after its great flapping wings had been silhouetted an instant against the full moon.

These things seemed content, on the whole, to let mankind alone; though they were at times held responsible for the disappearance of venturesome individuals—especially persons who built houses too close to certain valleys or too high up on certain mountains. Many localities came to be known as inadvisable to settle in, the feeling persisting long after the cause was forgotten. People would look up at some of the neighbouring mountain-precipices with a shudder, even when not recalling how many settlers had been lost, and how many farmhouses burnt to ashes, on the lower slopes of those grim, green sentinels.

But while according to the earliest legends the creatures would appear to have harmed only those trespassing on their privacy; there were later accounts of their curiosity respecting men, and of their attempts to establish secret outposts in the human world. There were tales of the queer claw-prints seen around farmhouse windows in the morning, and of occasional disappearances in regions outside the obviously haunted areas. Tales, besides, of buzzing voices in imitation of human speech which made surprising offers to lone travelers on roads and cart-paths in the deep woods, and of children frightened out of their wits

by things seen or heard where the primal forest pressed close upon their door-yards. In the final layer of legends—the layer just preceding the decline of superstition and the abandonment of close contact with the dreaded places—there are shocked references to hermits and remote farmers who at some period of life appeared to have undergone a repellent mental change, and who were shunned and whispered about as mortals who had sold themselves to the strange beings. In one of the northeastern counties it seemed to be a fashion about 1800 to accuse eccentric and unpopular recluses of being allies or representatives of the abhorred things.

As to what the things were—explanations naturally varied. The common name applied to them was “those ones,” or “the old ones,” though other terms had a local and transient use. Perhaps the bulk of the Puritan settlers set them down bluntly as familiars of the devil, and made them a basis of awed theological speculation. Those with Celtic legendry in their heritage—mainly the Scotch-Irish element of New Hampshire, and their kindred who had settled in Vermont on Governor Wentworth’s colonial grants—linked them vaguely with the malign fairies and “little people” of the bogs and raths, and protected themselves with scraps of incantation handed down through many generations. But the Indians had the most fantastic theories of all. While tribal legends

differed, there was a marked consensus of belief in certain vital particulars; it being unanimously agreed that the creatures were not native to this earth.

The Pennacook myths, which were the most consistent and picturesque, taught that the Winged Ones came from the Great Bear in the sky, and had mines in our earthly hills whence they took a kind of stone they could not get on any other world. They did not live here, said the myths, but merely maintained outposts and flew back with vast cargoes of stone to their own stars in the north. They harmed only those earth-people who got too near them or spied upon them. Animals shunned them through instinctive hatred, not because of being hunted. They could not eat the things and animals of earth, but brought their own food from the stars. It was bad to get near them, and sometimes young hunters who went into their hills never came back. It was not good, either, to listen to what they whispered at night in the forest with voices like a bee’s that tried to be like the voices of men. They knew the speech of all kinds of men—Pennacooks, Hurons, men of the Five Nations—but did not seem to have or need any speech of their own. They talked with their heads, which changed colour in different ways to mean different things.

All the legendry, of course, white and Indian alike, died down during the nineteenth century, except for

occasional atavistical flareups. The ways of the Vermonters became settled; and once their habitual paths and dwellings were established according to a certain fixed plan, they remembered less and less what fears and avoidances had determined that plan, and even that there had been any fears or avoidances. Most people simply knew that certain hilly regions were considered as highly unhealthy, unprofitable, and generally unlucky to live in, and that the farther one kept from them the better off one usually was. In time the ruts of custom and economic interest became so deeply cut in approved places that there was no longer any reason for going outside them, and the haunted hills were left deserted by accident rather than by design. Save during infrequent local scares, only wonder-loving grandmothers and retrospective nonagenarians ever whispered of beings dwelling in those hills; and even such whispers admitted that there was not much to fear from those things now that they were used to the presence of houses and settlements, and now that human beings let their chosen territory severely alone.

All this I had long known from my reading, and from certain folk tales picked up in New Hampshire; hence when the flood-time rumours began to appear, I could easily guess what imaginative background had evolved them. I took great pains to explain this to my friends, and was correspondingly amused when

several contentious souls continued to insist on a possible element of truth in the reports. Such persons tried to point out that the early legends had a significant persistence and uniformity, and that the virtually unexplored nature of the Vermont hills made it unwise to be dogmatic about what might or might not dwell among them; nor could they be silenced by my assurance that all the myths were of a well-known pattern common to most of mankind and determined by early phases of imaginative experience which always produced the same type of delusion.

It was of no use to demonstrate to such opponents that the Vermont myths differed but little in essence from those universal legends of natural personification which filled the ancient world with fauns and dryads and satyrs, suggested the kallikanzarai of modern Greece, and gave to wild Wales and Ireland their dark hints of strange, small, and terrible hidden races of troglodytes and burrowers. No use, either, to point out the even more startlingly similar belief of the Nepalese hill tribes in the dreaded Mi-Go or "Abominable Snow-Men" who lurk hideously amidst the ice and rock pinnacles of the Himalayan summits. When I brought up this evidence, my opponents turned it against me by claiming that it must imply some actual historicity for the ancient tales; that it must argue the real existence of some queer elder earth-race,

driven to hiding after the advent and dominance of mankind, which might very conceivably have survived in reduced numbers to relatively recent times—or even to the present.

The more I laughed at such theories, the more these stubborn friends asseverated them; adding that even without the heritage of legend the recent reports were too clear, consistent, detailed, and sanely prosaic in manner of telling, to be completely ignored. Two or three fanatical extremists went so far as to hint at possible meanings in the ancient Indian tales which gave the hidden beings a nonterrestrial origin; citing the extravagant books of Charles Fort with their claims that voyagers from other worlds and outer space have often visited the earth. Most of my foes, however, were merely romanticists who insisted on trying to transfer to real life the fantastic lore of lurking "little people" made popular by the magnificent horror-fiction of Arthur Machen.

II.

As was only natural under the circumstances, this piquant debating finally got into print in the form of letters to the Arkham Advertiser; some of which were copied in the press of those Vermont regions whence the flood-stories came. The Rutland Herald gave half a page of extracts from the letters on both sides, while

the Brattleboro Reformer reprinted one of my long historical and mythological summaries in full, with some accompanying comments in "The Pendrifter's" thoughtful column, which supported and applauded my skeptical conclusions. By the spring of 1928 I was almost a well-known figure in Vermont, notwithstanding the fact that I had never set foot in the state. Then came the challenging letters from Henry Akeley which impressed me so profoundly, and which took me for the first and last time to that fascinating realm of crowded green precipices and muttering forest streams.

Most of what I know of Henry Wentworth Akeley was gathered by correspondence with his neighbours, and with his only son in California, after my experience in his lonely farmhouse. He was, I discovered, the last representative on his home soil of a long, locally distinguished line of jurists, administrators, and gentlemen-agriculturists. In him, however, the family mentally had veered away from practical affairs to pure scholarship; so that he had been a notable student of mathematics, astronomy, biology, anthropology, and folklore at the University of Vermont. I had never previously heard of him, and he did not give many autobiographical details in his communications; but from the first I saw he was a man of character, education, and intelligence, albeit a recluse with very little worldly sophistication.

Despite the incredible nature of what he claimed, I could not help at once taking Akeley more seriously than I had taken any of the other challengers of my views. For one thing, he was really close to the actual phenomena—visible and tangible—that he speculated so grotesquely about; and for another thing, he was amazingly willing to leave his conclusions in a tentative state like a true man of science. He had no personal preferences to advance, and was always guided by what he took to be solid evidence. Of course I began by considering him mistaken, but gave him credit for being intelligently mistaken; and at no time did I emulate some of his friends in attributing his ideas, and his fear of the lonely green hills, to insanity. I could see that there was a great deal to the man, and knew that what he reported must surely come from strange circumstance deserving investigation, however little it might have to do with the fantastic causes he assigned. Later on I received from him certain material proofs which placed the matter on a somewhat different and bewilderingly bizarre basis.

I cannot do better than transcribe in full, so far as is possible, the long letter in which Akeley introduced himself, and which formed such an important landmark in my own intellectual history. It is no longer in my possession, but my memory holds almost every word of its portentous message; and again I

affirm my confidence in the sanity of the man who wrote it. Here is the text—a text which reached me in the cramped, archaic-looking scrawl of one who had obviously not mingled much with the world during his sedate, scholarly life.

R.F.D. #2,

Townshend, Windham Co., Vermont.

May 5, 1928

Albert N. Wilmarth, Esq.,

118 Saltonstall St.,

Arkham, Mass.

My Dear Sir:

I have read with great interest the Brattleboro Reformer's reprint (Apr. 23, '28) of your letter on the recent stories of strange bodies seen floating in our flooded streams last fall, and on the curious folklore they so well agree with. It is easy to see why an outlander would take the position you take, and even why "Pendrifter" agrees with you. That is the attitude generally taken by educated persons both in and out of Vermont, and was my own attitude as a young man (I am now 57) before my studies, both general and in Davenport's book, led me to do some exploring in parts of the hills hereabouts not usually visited.

I was directed toward such studies by the queer old tales I used to hear from elderly farmers of the more ignorant sort, but now I wish I had let the whole matter alone. I might say, with all proper modesty, that the subject of anthropology and folklore is by no means strange to me. I took a good deal of it at college, and am familiar with

most of the standard authorities such as Tylor, Lubbock, Frazer, Quatrefages, Murray, Osborn, Keith, Boule, G. Elliott Smith, and so on. It is no news to me that tales of hidden races are as old as all mankind. I have seen the reprints of letters from you, and those agreeing with you, in the Rutland Herald, and guess I know about where your controversy stands at the present time.

What I desire to say now is, that I am afraid your adversaries are nearer right than yourself, even though all reason seems to be on your side. They are nearer right than they realise themselves—for of course they go only by theory, and cannot know what I know. If I knew as little of the matter as they, I would feel justified in believing as they do. I would be wholly on your side.

You can see that I am having a hard time getting to the point, probably because I really dread getting to the point; but the upshot of the matter is that I have certain evidence that monstrous things do indeed live in the woods on the high hills which nobody visits. I have not seen any of the things floating in the rivers, as reported, but I have seen things like them under circumstances I dread to repeat. I have seen footprints, and of late have seen them nearer my own home (I live in the old Akeley place south of Townshend Village, on the side of Dark Mountain) than I dare tell you now. And I have overheard voices in the woods at certain points that I will not even begin to describe on paper.

At one place I heard them so much

that I took a phonograph there with a dictaphone attachment and wax blank—and I shall try to arrange to have you hear the record I got. I have run it on the machine for some of the old people up here, and one of the voices had nearly scared them paralysed by reason of its likeness to a certain voice (that buzzing voice in the woods which Davenport mentions) that their grandmothers have told about and mimicked for them. I know what most people think of a man who tells about "hearing voices"—but before you draw conclusions just listen to this record and ask some of the older backwoods people what they think of it. If you can account for it normally, very well; but there must be something behind it. Ex nihilo nihil fit, you know.

Now my object in writing you is not to start an argument but to give you information which I think a man of your tastes will find deeply interesting. This is private. Publicly I am on your side, for certain things show me that it does not do for people to know too much about these matters. My own studies are now wholly private, and I would not think of saying anything to attract people's attention and cause them to visit the places I have explored. It is true—terribly true—that there are non-human creatures watching us all the time; with spies among us gathering information. It is from a wretched man who, if he was sane (as I think he was) was one of those spies, that I got a large part of my clues to the matter. He later killed himself, but I have reason to think there are others now.

The things come from another planet, being able to live in interstellar space and fly through it on clumsy, powerful wings which have a way of resisting the aether but which are too poor at steering to be of much use in helping them about on earth. I will tell you about this later if you do not dismiss me at once as a madman. They come here to get metals from mines that go deep under the hills, and I think I know where they come from. They will not hurt us if we let them alone, but no one can say what will happen if we get too curious about them. Of course a good army of men could wipe out their mining colony. That is what they are afraid of. But if that happened, more would come from outside—any number of them. They could easily conquer the earth, but have not tried so far because they have not needed to. They would rather leave things as they are to save bother.

I think they mean to get rid of me because of what I have discovered. There is a great black stone with unknown hieroglyphics half worn away which I found in the woods on Round Hill, east of here; and after I took it home everything became different. If they think I suspect too much they will either kill me or take me off the earth to where they come from. They like to take away men of learning once in a while, to keep informed on the state of things in the human world.

This leads me to my secondary purpose in addressing you—namely, to urge you to hush up the present debate rather than give it more publicity.

People must be kept away from these hills, and in order to effect this, their curiosity ought not to be aroused any further. Heaven knows there is peril enough anyway, with promoters and real estate men flooding Vermont with herds of summer people to overrun the wild places and cover the hills with cheap bungalows.

I shall welcome further communication with you, and shall try to send you that phonograph record and black stone (which is so worn that photographs don't show much) by express if you are willing. I say "try" because I think those creatures have a way of tampering with things around here. There is a sullen furtive fellow named Brown, on a farm near the village, who I think is their spy. Little by little they are trying to cut me off from our world because I know too much about their world.

They have the most amazing way of finding out what I do. You may not even get this letter. I think I shall have to leave this part of the country and go live with my son in San Diego, Cal., if things get any worse, but it is not easy to give up the place you were born in, and where your family has lived for six generations. Also, I would hardly dare sell this house to anybody now that the creatures have taken notice of it. They seem to be trying to get the black stone back and destroy the phonograph record, but I shall not let them if I can help it. My great police dogs always hold them back, for there are very few here as yet, and they are clumsy in getting about. As I have said, their wings are not much

use for short flights on earth. I am on the very brink of deciphering that stone—in a very terrible way—and with your knowledge of folklore you may be able to supply the missing links enough to help me. I suppose you know all about the fearful myths antedating the coming of man to the earth—the Yog-Sothoth and Cthulhu cycles—which are hinted at in the Necronomicon. I had access to a copy of that once, and hear that you have one in your college library under lock and key.

To conclude, Mr. Wilmarth, I think that with our respective studies we can be very useful to each other. I don't wish to put you in any peril, and suppose I ought to warn you that possession of the stone and the record won't be very safe; but I think you will find any risks worth running for the sake of knowledge. I will drive down to Newfane or Brattleboro to send whatever you authorize me to send, for the express offices there are more to be trusted.

I might say that I live quite alone now, since I can't keep hired help any more. They won't stay because of the things that try to get near the house at night, and that keep the dogs barking continually. I am glad I didn't get as deep as this into the business while my wife was alive, for it would have driven her mad.

Hoping that I am not bothering you unduly, and that you will decide to get in touch with me rather than throw this letter into the waste basket as a madman's raving, I am

Yrs. very truly,

HENRY W. AKELEY

P.S. I am making some extra prints of certain photographs taken by me, which I think will help to prove a number of the points I have touched on. The old people think they are monstrously true. I shall send you these very soon if you are interested.

—H. W. A.

It would be difficult to describe my sentiments upon reading this strange document for the first time. By all ordinary rules, I ought to have laughed more loudly at these extravagances than at the far milder theories which had previously moved me to mirth; yet something in the tone of the letter made me take it with paradoxical seriousness. Not that I believed for a moment in the hidden race from the stars which my correspondent spoke of; but that, after some grave preliminary doubts, I grew to feel oddly sure of his sanity and sincerity, and of his confrontation by some genuine though singular and abnormal phenomenon which he could not explain except in this imaginative way. It could not be as he thought it, I reflected, yet on the other hand, it could not be otherwise than worthy of investigation. The man seemed unduly excited and alarmed about something, but it was hard to think that all cause was lacking. He was so specific and logical in certain ways—and after all, his yarn did fit in so perplexingly well with some of the old myths—even the wildest Indian legends.

That he had really overheard

disturbing voices in the hills, and had really found the black stone he spoke about, was wholly possible despite the crazy inferences he had made—inferences probably suggested by the man who had claimed to be a spy of the outer beings and had later killed himself. It was easy to deduce that this man must have been wholly insane, but that he probably had a streak of perverse outward logic which made the naïve Akeley—already prepared for such things by his folklore studies—believe his tale. As for the latest developments—it appeared from his inability to keep hired help that Akeley's humbler rustic neighbours were as convinced as he that his house was besieged by uncanny things at night. The dogs really barked, too.

And then the matter of that phonograph record, which I could not but believe he had obtained in the way he said. It must mean something; whether animal noises deceptively like human speech, or the speech of some hidden, night-haunting human being decayed to a state not much above that of lower animals. From this my thoughts went back to the black hieroglyphed stone, and to speculations upon what it might mean. Then, too, what of the photographs which Akeley said he was about to send, and which the old people had found so convincingly terrible?

As I re-read the cramped handwriting I felt as never before that my

credulous opponents might have more on their side than I had conceded. After all, there might be some queer and perhaps hereditarily misshapen outcasts in those shunned hills, even though no such race of star-born monsters as folklore claimed. And if there were, then the presence of strange bodies in the flooded streams would not be wholly beyond belief. Was it too presumptuous to suppose that both the old legends and the recent reports had this much of reality behind them? But even as I harboured these doubts I felt ashamed that so fantastic a piece of bizarrerie as Henry Akeley's wild letter had brought them up.

In the end I answered Akeley's letter, adopting a tone of friendly interest and soliciting further particulars. His reply came almost by return mail; and contained, true to promise, a number of Kodak views of scenes and objects illustrating what he had to tell. Glancing at these pictures as I took them from the envelope, I felt a curious sense of fright and nearness to forbidden things; for in spite of the vagueness of most of them, they had a damnably suggestive power which was intensified by the fact of their being genuine photographs—actual optical links with what they portrayed, and the product of an impersonal transmitting process without prejudice, fallibility, or mendacity.

The more I looked at them, the more I saw that my serious estimate of Akeley and his story had not been

unjustified. Certainly, these pictures carried conclusive evidence of something in the Vermont hills which was at least vastly outside the radius of our common knowledge and belief. The worst thing of all was the footprint—a view taken where the sun shone on a mud patch somewhere in a deserted upland. This was no cheaply counterfeited thing, I could see at a glance; for the sharply defined pebbles and grassblades in the field of vision gave a clear index of scale and left no possibility of a tricky double exposure. I have called the thing a “footprint,” but “claw-print” would be a better term. Even now I can scarcely describe it save to say that it was hideously crablike, and that there seemed to be some ambiguity about its direction. It was not a very deep or fresh print, but seemed to be about the size of an average man's foot. From a central pad, pairs of saw-toothed nippers projected in opposite directions—quite baffling as to function, if indeed the whole object were exclusively an organ of locomotion.

Another photograph—evidently a time-exposure taken in deep shadow—was of the mouth of a woodland cave, with a boulder of rounded regularity choking the aperture. On the bare ground in front of it, one could just discern a dense network of curious tracks, and when I studied the picture with a magnifier I felt uneasily sure that the tracks were like the one in the other view. A third pictured showed a druid-like

circle of standing stones on the summit of a wild hill. Around the cryptic circle the grass was very much beaten down and worn away, though I could not detect any footprints even with the glass. The extreme remoteness of the place was apparent from the veritable sea of tenantless mountains which formed the background and stretched away toward a misty horizon.

But if the most disturbing of all the views was that of the footprint, the most curiously suggestive was that of the great black stone found in the Round Hill woods. Akeley had photographed it on what was evidently his study table, for I could see rows of books and a bust of Milton in the background. The thing, as nearly as one might guess, had faced the camera vertically with a somewhat irregularly curved surface of one by two feet; but to say anything definite about that surface, or about the general shape of the whole mass, almost defies the power of language. What outlandish geometrical principles had guided its cutting—for artificially cut it surely was—I could not even begin to guess; and never before had I seen anything which struck me as so strangely and unmistakably alien to this world. Of the hieroglyphics on the surface I could discern very few, but one or two that I did see gave rather a shock. Of course they might be fraudulent, for others besides myself had read the monstrous and abhorred Necronomicon of the mad

Arab Abdul Alhazred; but it nevertheless made me shiver to recognise certain ideographs which study had taught me to link with the most blood-curdling and blasphemous whispers of things that had had a kind of mad half-existence before the earth and the other inner worlds of the solar system were made.

Of the five remaining pictures, three were of swamp and hill scenes which seemed to bear traces of hidden and unwholesome tenancy. Another was of a queer mark in the ground very near Akeley's house, which he said he had photographed the morning after a night on which the dogs had barked more violently than usual. It was very blurred, and one could really draw no certain conclusions from it; but it did seem fiendishly like that other mark or claw-print photographed on the deserted upland. The final picture was of the Akeley place itself: a trim white house of two stories and attic, about a century and a quarter old, and with a well-kept lawn and stone-bordered path leading up to a tastefully carved Georgian doorway. There were several huge police dogs on the lawn, squatting near a pleasant-faced man with a close-cropped grey beard whom I took to be Akeley himself—his own photographer, one might infer from the tube-connected bulb in his right hand.

From the pictures I turned to the bulky, closely-written letter itself; and for the next three hours was immersed in a gulf of unutterable

horror. Where Akeley had given only outlines before, he now entered into minute details; presenting long transcripts of words overheard in the woods at night, long accounts of monstrous pinkish forms spied in thickets at twilight on the hills, and a terrible cosmic narrative derived from the application of profound and varied scholarship to the endless bygone discourses of the mad self-styled spy who had killed himself. I found myself faced by names and terms that I had heard elsewhere in the most hideous of connections—Yuggoth, Great Cthulhu, Tsathoggua, Yog Sothoth, R'lyeh, Nyarlathotep, Azathoth, Hastur, Yian, Leng, the Lake of Hali, Bethmoora, the Yellow Sign, L'mur-Kathulos, Bran, and the Magnum Innominandum—and was drawn back through nameless aeons and inconceivable dimensions to worlds of elder, outer entity at which the crazed author of the *Necronomicon* had only guessed in the vaguest way. I was told of the pits of primal life, and of the streams that had trickled down therefrom; and finally, of the tiny rivulets from one of those streams which had become entangled with the destinies of our own earth.

My brain whirled; and where before I had attempted to explain things away, I now began to believe in the most abnormal and incredible wonders. The array of vital evidence was damnably vast and overwhelming; and the cool, scientific

attitude of Akeley—an attitude removed as far as imaginable from the demented, the fanatical, the hysterical, or even the extravagantly speculative—had a tremendous effect on my thought and judgment. By the time I laid the frightful letter aside I could understand the fears he had come to entertain, and was ready to do anything in my power to keep people away from those wild, haunted hills. Even now, when time has dulled the impression and made me half-question my own experience and horrible doubts, there are things in that letter of Akeley's which I would not quote, or even form into words on paper. I am almost glad that the letter and record and photographs are gone now—and I wish, for reasons I shall soon make clear, that the new planet beyond Neptune had not been discovered.

With the reading of that letter my public debating about the Vermont horror permanently ended. Arguments from opponents remained unanswered or put off with promises, and eventually the controversy petered out into oblivion. During late May and June I was in constant correspondence with Akeley; though once in a while a letter would be lost, so that we would have to retrace our ground and perform considerable laborious copying. What we were trying to do, as a whole, was to compare notes in matters of obscure mythological scholarship and arrive at a clearer correlation of the Vermont horrors

with the general body of primitive world legend.

For one thing, we virtually decided that these morbidities and the hellish Himalayan Mi-Go were one and the same order of incarnated nightmare. There were also absorbing zoological conjectures, which I would have referred to Professor Dexter in my own college but for Akeley's imperative command to tell no one of the matter before us. If I seem to disobey that command now, it is only because I think that at this stage a warning about those farther Vermont hills—and about those Himalayan peaks which bold explorers are more and more determined to ascend—is more conducive to public safety than silence would be. One specific thing we were leading up to was a deciphering of the hieroglyphics on that infamous black stone—a deciphering which might well place us in possession of secrets deeper and more dizzying than any formerly known to man.

III.

Toward the end of June the phonograph record came—shipped from Brattleboro, since Akeley was unwilling to trust conditions on the branch line north of there. He had begun to feel an increased sense of espionage, aggravated by the loss of some of our letters; and said much about the insidious deeds of certain men whom he considered tools and

agents of the hidden beings. Most of all he suspected the surly farmer Walter Brown, who lived alone on a run-down hillside place near the deep woods, and who was often seen loafing around corners in Brattleboro, Bellows Falls, Newfane, and South Londonderry in the most inexplicable and seemingly unmotivated way. Brown's voice, he felt convinced, was one of those he had overheard on a certain occasion in a very terrible conversation; and he had once found a footprint or clawprint near Brown's house which might possess the most ominous significance. It had been curiously near some of Brown's own footprints—footprints that faced toward it.

So the record was shipped from Brattleboro, whither Akeley drove in his Ford car along the lonely Vermont back roads. He confessed in an accompanying note that he was beginning to be afraid of those roads, and that he would not even go into Townshend for supplies now except in broad daylight. It did not pay, he repeated again and again, to know too much unless one were very remote from those silent and problematical hills. He would be going to California pretty soon to live with his son, though it was hard to leave a place where all one's memories and ancestral feelings centered.

Before trying the record on the commercial machine which I borrowed from the college administration building I carefully went

over all the explanatory matter in Akeley's various letters. This record, he had said, was obtained about 1 a.m. on the 1st of May, 1915, near the closed mouth of a cave where the wooded west slope of Dark Mountain rises out of Lee's swamp. The place had always been unusually plagued with strange voices, this being the reason he had brought the phonograph, dictaphone, and blank in expectation of results. Former experience had told him that May Eve—the hideous Sabbat-night of underground European legend—would probably be more fruitful than any other date, and he was not disappointed. It was noteworthy, though, that he never again heard voices at that particular spot.

Unlike most of the overheard forest voices, the substance of the record was quasi-ritualistic, and included one palpably human voice which Akeley had never been able to place. It was not Brown's, but seemed to be that of a man of greater cultivation. The second voice, however, was the real crux of the thing—for this was the accursed buzzing which had no likeness to humanity despite the human words which it uttered in good English grammar and with a scholarly accent.

The recording phonograph and dictaphone had not worked uniformly well, and had of course been at a great disadvantage because of the remote and muffled nature of the overheard ritual; so that the actual speech secured was very

fragmentary. Akeley had given me a transcript of what he believed the spoken words to be, and I glanced through this again as I prepared the machine for action. The text was darkly mysterious rather than openly horrible, though a knowledge of its origin and manner of gathering gave it all the associative horror which any words could well possess. I will present it here in full as I remember it—and I am fairly confident that I know it correctly by heart, not only from reading the transcript, but from playing the record itself over and over again. It is not a thing which one might readily forget!

(Indistinguishable Sounds)

A CULTIVATED MALE

HUMAN VOICE: ... is the Lord of the Wood, even to... and the gifts of the men of Leng... so from the wells of night to the gulfs of space, and from the gulfs of space to the wells of night, ever the praises of Great Cthulhu, of Tsathoggua, and of Him Who is not to be Named. Ever Their praises, and abundance to the Black Goat of the Woods. Ia! Shub-Niggurath! The Goat with a Thousand Young!

A BUZZING IMITATION OF HUMAN SPEECH: Ia! Shub-Niggurath! The Black Goat of the Woods with a Thousand Young!

HUMAN VOICE: And it has come to pass that the Lord of the Woods, being... seven and nine, down the onyx steps... (tri)butes to Him in the Gulf, Azathoth, He of Whom Thou hast taught us marv(els)... on the wings of

night out beyond space, out beyond th... to That whereof Yuggoth is the youngest child, rolling alone in black aether at the rim...

BUZZING VOICE: ...go out among men and find the ways thereof, that He in the Gulf may know. To Nyarlathotep, Mighty Messenger, must all things be told. And He shall put on the semblance of men, the waxen mask and the robe that hides, and come down from the world of Seven Suns to mock...

HUMAN VOICE: Nyarlathotep, Great Messenger, bringer of strange joy to Yuggoth through the void, Father of the Million Favoured Ones, Stalker among...

(Speech Cut Off by End of Record)

Such were the words for which I was to listen when I started the phonograph. It was with a trace of genuine dread and reluctance that I pressed the lever and heard the preliminary scratching of the sapphire point, and I was glad that the first faint, fragmentary words were in a human voice—a mellow, educated voice which seemed vaguely Bostonian in accent, and which was certainly not that of any native of the Vermont hills. As I listened to the tantalisingly feeble rendering, I seemed to find the speech identical with Akeley's carefully prepared transcript. On it chanted, in that mellow Bostonian voice... "Ia! Shub-Niggurath! The Goat with a Thousand Young!..."

And then I heard the other voice. To this hour I shudder

retrospectively when I think of how it struck me, prepared though I was by Akeley's accounts. Those to whom I have since described the record profess to find nothing but cheap imposture or madness in it; but could they have the accursed thing itself, or read the bulk of Akeley's correspondence, (especially that terrible and encyclopaedic second letter), I know they would think differently. It is, after all, a tremendous pity that I did not disobey Akeley and play the record for others—a tremendous pity, too, that all of his letters were lost. To me, with my first-hand impression of the actual sounds, and with my knowledge of the background and surrounding circumstances, the voice was a monstrous thing. It swiftly followed the human voice in ritualistic response, but in my imagination it was a morbid echo winging its way across unimaginable abysses from unimaginable outer hells. It is more than two years now since I last ran off that blasphemous waxen cylinder; but at this moment, and at all other moments, I can still hear that feeble, fiendish buzzing as it reached me for the first time.

"Ia! Shub-Niggurath! The Black Goat of the Woods with a Thousand Young!"

But though the voice is always in my ears, I have not even yet been able to analyse it well enough for a graphic description. It was like the drone of some loathsome, gigantic insect ponderously shaped into the

articulate speech of an alien species, and I am perfectly certain that the organs producing it can have no resemblance to the vocal organs of man, or indeed to those of any of the mammalia. There were singularities in timbre, range, and overtones which placed this phenomenon wholly outside the sphere of humanity and earth-life. Its sudden advent that first time almost stunned me, and I heard the rest of the record through in a sort of abstracted daze. When the longer passage of buzzing came, there was a sharp intensification of that feeling of blasphemous infinity which had struck me during the shorter and earlier passage. At last the record ended abruptly, during an unusually clear speech of the human and Bostonian voice; but I sat stupidly staring long after the machine had automatically stopped.

I hardly need say that I gave that shocking record many another playing, and that I made exhaustive attempts at analysis and comment in comparing notes with Akeley. It would be both useless and disturbing to repeat here all that we concluded; but I may hint that we agreed in believing we had secured a clue to the source of some of the most repulsive primordial customs in the cryptic elder religions of mankind. It seemed plain to us, also, that there were ancient and elaborate alliances between the hidden outer creatures and certain members of the human race. How extensive these alliances were, and how their state today

might compare with their state in earlier ages, we had no means of guessing; yet at best there was room for a limitless amount of horrified speculation. There seemed to be an awful, immemorial linkage in several definite stages betwixt man and nameless infinity. The blasphemies which appeared on earth, it was hinted, came from the dark planet Yuggoth, at the rim of the solar system; but this was itself merely the populous outpost of a frightful interstellar race whose ultimate source must lie far outside even the Einsteinian space-time continuum or greatest known cosmos.

Meanwhile we continued to discuss the black stone and the best way of getting it to Arkham—Akeley deeming it inadvisable to have me visit him at the scene of his nightmare studies. For some reason or other, Akeley was afraid to trust the thing to any ordinary or expected transportation route. His final idea was to take it across country to Bellows Falls and ship it on the Boston and Maine system through Keene and Winchendon and Fitchburg, even though this would necessitate his driving along somewhat lonelier and more forest-traversing hill roads than the main highway to Brattleboro. He said he had noticed a man around the express office at Brattleboro when he had sent the phonograph record, whose actions and expression had been far from reassuring. This man had seemed too anxious to talk with

the clerks, and had taken the train on which the record was shipped. Akeley confessed that he had not felt strictly at ease about that record until he heard from me of its safe receipt.

About this time—the second week in July—another letter of mine went astray, as I learned through an anxious communication from Akeley. After that he told me to address him no more at Townshend, but to send all mail in care of the General Delivery at Brattleboro; whither he would make frequent trips either in his car or on the motor-coach line which had lately replaced passenger service on the lagging branch railway. I could see that he was getting more and more anxious, for he went into much detail about the increased barking of the dogs on moonless nights, and about the fresh claw-prints he sometimes found in the road and in the mud at the back of his farmyard when morning came. Once he told about a veritable army of prints drawn up in a line facing an equally thick and resolute line of dog-tracks, and sent a loathsomely disturbing Kodak picture to prove it. That was after a night on which the dogs had outdone themselves in barking and howling.

On the morning of Wednesday, July 18, I received a telegram from Bellows Falls, in which Akeley said he was expressing the black stone over the B. & M. on Train No. 5508, leaving Bellows Falls at 12:15 p.m., standard time, and due at the North

Station in Boston at 4:12 p.m. It ought, I calculated, to get up to Arkham at least by the next noon; and accordingly I stayed in all Thursday morning to receive it. But noon came and went without its advent, and when I telephoned down to the express office I was informed that no shipment for me had arrived. My next act, performed amidst a growing alarm, was to give a long-distance call to the express agent at the Boston North Station; and I was scarcely surprised to learn that my consignment had not appeared. Train No. 5508 had pulled in only 35 minutes late on the day before, but had contained no box addressed to me. The agent promised, however, to institute a searching inquiry; and I ended the day by sending Akeley a night-letter outlining the situation.

With commendable promptness a report came from the Boston office on the following afternoon, the agent telephoning as soon as he learned the facts. It seemed that the railway express clerk on No. 5508 had been able to recall an incident which might have much bearing on my loss—an argument with a very curious-voiced man, lean, sandy, and rustic-looking, when the train was waiting at Keene, N. H., shortly after one o'clock standard time. The man, he said, was greatly excited about a heavy box which he claimed to expect, but which was neither on the train nor entered on the company's books. He had given the name of

Stanley Adams, and had had such a queerly thick droning voice, that it made the clerk abnormally dizzy and sleepy to listen to him. The clerk could not remember quite how the conversation had ended, but recalled starting into a fuller awakesness when the train began to move. The Boston agent added that this clerk was a young man of wholly unquestioned veracity and reliability, of known antecedents and long with the company.

That evening I went to Boston to interview the clerk in person, having obtained his name and address from the office. He was a frank, prepossessing fellow, but I saw that he could add nothing to his original account. Oddly, he was scarcely sure that he could even recognise the strange inquirer again. Realising that he had no more to tell, I returned to Arkham and sat up till morning writing letters to Akeley, to the express company and to the police department and station agent in Keene. I felt that the strange-voiced man who had so queerly affected the clerk must have a pivotal place in the ominous business, and hoped that Keene station employees and telegraph-office records might tell something about him and about how he happened to make his inquiry when and where he did.

I must admit, however, that all my investigations came to nothing. The queer-voiced man had indeed been noticed around the Keene

station in the early afternoon of July 18, and one lounge seemed to couple him vaguely with a heavy box; but he was altogether unknown, and had not been seen before or since. He had not visited the telegraph office or received any message so far as could be learned, nor had any message which might justly be considered a notice of the black stone's presence on No. 5508 come through the office for anyone. Naturally Akeley joined with me in conducting these inquiries, and even made a personal trip to Keene to question the people around the station; but his attitude toward the matter was more fatalistic than mine. He seemed to find the loss of the box a portentous and menacing fulfillment of inevitable tendencies, and had no real hope at all of its recovery. He spoke of the undoubted telepathic and hypnotic powers of the hill creatures and their agents, and in one letter hinted that he did not believe the stone was on this earth any longer. For my part, I was duly enraged, for I had felt there was at least a chance of learning profound and astonishing things from the old, blurred hieroglyphs. The matter would have rankled bitterly in my mind had not Akeley's immediately subsequent letters brought up a new phase of the whole horrible hill problem which at once seized all my attention.

IV.

The unknown things, Akeley wrote in a script grown pitifully tremulous, had begun to close in on him with a wholly new degree of determination. The nocturnal barking of the dogs whenever the moon was dim or absent was hideous now, and there had been attempts to molest him on the lonely roads he had to traverse by day. On the second of August, while bound for the village in his car, he had found a tree-trunk laid in his path at a point where the highway ran through a deep patch of woods; while the savage barking of the two great dogs he had with him told all too well of the things which must have been lurking near. What would have happened had the dogs not been there, he did not dare guess—but he never went out now without at least two of his faithful and powerful pack. Other road experiences had occurred on August fifth and sixth; a shot grazing his car on one occasion, and the barking of the dogs telling of unholy woodland presences on the other.

On August fifteenth I received a frantic letter which disturbed me greatly, and which made me wish Akeley could put aside his lonely reticence and call in the aid of the law. There had been frightful happening on the night of the 12-13th, bullets flying outside the farmhouse, and three of the twelve

great dogs being found shot dead in the morning. There were myriads of claw-prints in the road, with the human prints of Walter Brown among them. Akeley had started to telephone to Brattleboro for more dogs, but the wire had gone dead before he had a chance to say much. Later he went to Brattleboro in his car, and learned there that linemen had found the main cable neatly cut at a point where it ran through the deserted hills north of Newfane. But he was about to start home with four fine new dogs, and several cases of ammunition for his big-game repeating rifle. The letter was written at the post office in Brattleboro, and came through to me without delay.

My attitude toward the matter was by this time quickly slipping from a scientific to an alarmedly personal one. I was afraid for Akeley in his remote, lonely farmhouse, and half afraid for myself because of my now definite connection with the strange hill problem. The thing was reaching out so. Would it suck me in and engulf me? In replying to his letter I urged him to seek help, and hinted that I might take action myself if he did not. I spoke of visiting Vermont in person in spite of his wishes, and of helping him explain the situation to the proper authorities. In return, however, I received only a telegram from Bellows Falls which read thus:

APPRECIATE YOUR
POSITION BUT CAN DO

NOTHING TAKE NO ACTION
YOURSELF FOR IT COULD
ONLY HARM BOTH WAIT FOR
EXPLANATION

HENRY AKELEY

But the affair was steadily deepening. Upon my replying to the telegram I received a shaky note from Akeley with the astonishing news that he had not only never sent the wire, but had not received the letter from me to which it was an obvious reply. Hasty inquiries by him at Bellows Falls had brought out that the message was deposited by a strange sandy-haired man with a curiously thick, droning voice, though more than this he could not learn. The clerk showed him the original text as scrawled in pencil by the sender, but the handwriting was wholly unfamiliar. It was noticeable that the signature was misspelled—A-K-E-L-Y, without the second “E.” Certain conjectures were inevitable, but amidst the obvious crisis he did not stop to elaborate upon them.

He spoke of the death of more dogs and the purchase of still others, and of the exchange of gunfire which had become a settled feature each moonless night. Brown’s prints, and the prints of at least one or two more shod human figures, were now found regularly among the claw-prints in the road, and at the back of the farmyard. It was, Akeley admitted, a pretty bad business; and before long he would probably have to go to live with his California son whether or

not he could sell the old place. But it was not easy to leave the only spot one could really think of as home. He must try to hang on a little longer; perhaps he could scare off the intruders—especially if he openly gave up all further attempts to penetrate their secrets.

Writing Akeley at once, I renewed my offers of aid, and spoke again of visiting him and helping him convince the authorities of his dire peril. In his reply he seemed less set against that plan than his past attitude would have led one to predict, but said he would like to hold off a little while longer—long enough to get his things in order and reconcile himself to the idea of leaving an almost morbidly cherished birthplace. People looked askance at his studies and speculations and it would be better to get quietly off without setting the countryside in a turmoil and creating widespread doubts of his own sanity. He had had enough, he admitted, but he wanted to make a dignified exit if he could.

This letter reached me on the 28th of August, and I prepared and mailed as encouraging a reply as I could. Apparently the encouragement had effect, for Akeley had fewer terrors to report when he acknowledged my note. He was not very optimistic, though, and expressed the belief that it was only the full moon season which was holding the creatures off. He hoped there would not be many densely

cloudy nights, and talked vaguely of boarding in Brattleboro when the moon waned. Again I wrote him encouragingly but on September 5th there came a fresh communication which had obviously crossed my letter in the mails; and to this I could not give any such hopeful response. In view of its importance I believe I had better give it in full—as best I can do from memory of the shaky script. It ran substantially as follows:

Monday

Dear Wilmarth:

A rather discouraging P. S. to my last. Last night was thickly cloudy—though no rain—and not a bit of moonlight got through. Things were pretty bad, and I think the end is getting near, in spite of all we have hoped. After midnight something landed on the roof of the house, and the dogs all rushed up to see what it was. I could hear them snapping and tearing around, and then one managed to get on the roof by jumping from the low ell. There was a terrible fight up there, and I heard a frightful buzzing which I’ll never forget. And then there was a shocking smell. About the same time bullets came through the window and nearly grazed me. I think the main line of the hill creatures had got close to the house when the dogs divided because of the roof business. What was up there I don’t know yet, but I’m afraid the creatures are learning to steer better with their space wings. I put out the light and used the windows for loopholes, and raked all around the house with rifle fire

aimed just high enough not to hit the dogs. That seemed to end the business, but in the morning I found great pools of blood in the yard, besides pools of a green sticky stuff that had the worst odour I have ever smelled. I climbed up on the roof and found more of the sticky stuff there. Five of the dogs were killed—I’m afraid I hit one myself by aiming too low, for he was shot in the back. Now I am setting the panes the shots broke, and am going to Brattleboro for more dogs. I guess the men at the kennels think I am crazy. Will drop another note later. Suppose I’ll be ready for moving in a week or two, though it nearly kills me to think of it.

Hastily—AKELEY

But this was not the only letter from Akeley to cross mine. On the next morning—September 6th—still another came; this time a frantic scrawl which utterly unnerved me and put me at a loss what to say or do next. Again I cannot do better than quote the text as faithfully as memory will let me.

Tuesday

Clouds didn’t break, so no moon again—and going into the wane anyhow. I’d have the house wired for electricity and put in a searchlight if I didn’t know they’d cut the cables as fast as they could be mended.

I think I am going crazy. It may be that all I have ever written you is a dream or madness. It was bad enough before, but this time it is too much. They talked to me last night—talked in that

cursed buzzing voice and told me things that I dare not repeat to you. I heard them plainly above the barking of the dogs, and once when they were drowned out a human voice helped them. Keep out of this, Wilmarth—it is worse than either you or I ever suspected. They don't mean to let me get to California now—they want to take me off alive, or what theoretically and mentally amounts to alive—not only to Yuggoth, but beyond that—away outside the galaxy and possibly beyond the last curved rim of space. I told them I wouldn't go where they wish, or in the terrible way they propose to take me, but I'm afraid it will be no use. My place is so far out that they may come by day as well as by night before long. Six more dogs killed, and I felt presences all along the wooded parts of the road when I drove to Brattleboro today. It was a mistake for me to try to send you that phonograph record and black stone. Better smash the record before it's too late. Will drop you another line tomorrow if I'm still here. Wish I could arrange to get my books and things to Brattleboro and board there. I would run off without anything if I could but something inside my mind holds me back. I can slip out to Brattleboro, where I ought to be safe, but I feel just as much a prisoner there as at the house. And I seem to know that I couldn't get much farther even if I dropped everything and tried. It is horrible—don't get mixed up in this.

Yrs—AKELEY

I did not sleep at all the night after receiving this terrible thing,

and was utterly baffled as to Akeley's remaining degree of sanity. The substance of the note was wholly insane, yet the manner of expression—in view of all that had gone before—had a grimly potent quality of convincingness. I made no attempt to answer it, thinking it better to wait until Akeley might have time to reply to my latest communication. Such a reply indeed came on the following day, though the fresh material in it quite overshadowed any of the points brought up by the letter nominally answered. Here is what I recall of the text, scrawled and blotted as it was in the course of a plainly frantic and hurried composition.

Wednesday

W.: –

Your letter came, but it's no use to discuss anything any more. I am fully resigned. Wonder that I have even enough will power left to fight them off. Can't escape even if I were willing to give up everything and run. They'll get me.

Had a letter from them yesterday—R.F.D. man brought it while I was at Brattleboro. Typed and post-marked Bellows Falls. Tells what they want to do with me—I can't repeat it. Look out for yourself, too! Smash that record. Cloudy nights keep up, and moon waning all the time. Wish I dared to get help—it might brace up my will power—but everyone who would dare to come at all would call me crazy unless there happened to be some proof.

Couldn't ask people to come for no reason at all—am all out of touch with everybody and have been for years.

But I haven't told you the worst, Wilmarth. Brace up to read this, for it will give you a shock. I am telling the truth, though. It is this—I have seen and touched one of the things, or part of one of the things. God, man, but it's awful! It was dead, of course. One of the dogs had it, and I found it near the kennel this morning. I tried to save it in the woodshed to convince people of the whole thing, but it all evaporated in a few hours. Nothing left. You know, all those things in the rivers were seen only on the first morning after the flood. And here's the worst. I tried to photograph it for you, but when I developed the film there wasn't anything visible except the woodshed. What can the thing have been made of? I saw it and felt it, and they all leave footprints. It was surely made of matter—but what kind of matter? The shape can't be described. It was a great crab with a lot of pyramided fleshy rings or knots of thick, ropy stuff covered with feelers where a man's head would be. That green sticky stuff is its blood or juice. And there are more of them due on earth any minute.

Walter Brown is missing—hasn't been seen loafing around any of his usual corners in the villages hereabouts. I must have got him with one of my shots, though the creatures always seem to try to take their dead and wounded away.

Got into town this afternoon without any trouble, but am afraid they're beginning to hold off because

they're sure of me. Am writing this in Brattleboro P.O. This may be goodbye—if it is, write my son George Goodenough Akeley, 176 Pleasant St., San Diego, Cal., but don't come up here. Write the boy if you don't hear from me in a week, and watch the papers for news.

I'm going to play my last two cards now—if I have the will power left. First to try poison gas on the things (I've got the right chemicals and have fixed up masks for myself and the dogs) and then if that doesn't work, tell the sheriff. They can lock me in a madhouse if they want to—it'll be better than what the other creatures would do. Perhaps I can get them to pay attention to the prints around the house—they are faint, but I can find them every morning. Suppose, though, police would say I faked them somehow; for they all think I'm a queer character.

Must try to have a state policeman spend a night here and see for himself—though it would be just like the creatures to learn about it and hold off that night. They cut my wires whenever I try to telephone in the night—the linemen think it is very queer, and may testify for me if they don't go and imagine I cut them myself. I haven't tried to keep them repaired for over a week now.

I could get some of the ignorant people to testify for me about the reality of the horrors, but everybody laughs at what they say, and anyway, they have shunned my place for so long that they don't know any of the new events. You couldn't get one of those rundown farmers to come within a mile of my house for love or money. The

mail-carrier hears what they say and jokes me about it—God! If I only dared tell him how real it is! I think I'll try to get him to notice the prints, but he comes in the afternoon and they're usually about gone by that time. If I kept one by setting a box or pan over it, he'd think surely it was a fake or joke.

Wish I hadn't gotten to be such a hermit, so folks don't drop around as they used to. I've never dared show the black stone or the Kodak pictures, or play that record, to anybody but the ignorant people. The others would say I faked the whole business and do nothing but laugh. But I may yet try showing the pictures. They give those claw-prints clearly, even if the things that made them can't be photographed. What a shame nobody else saw that thing this morning before it went to nothing!

But I don't know as I care. After what I've been through, a madhouse is as good a place as any. The doctors can help me make up my mind to get away from this house, and that is all that will save me.

Write my son George if you don't hear soon. Goodbye, smash that record, and don't mix up in this.

Yrs—AKELEY

This letter frankly plunged me into the blackest of terror. I did not know what to say in answer, but scratched off some incoherent words of advice and encouragement and sent them by registered mail. I recall urging Akeley to move to Brattleboro at once, and place himself under the

protection of the authorities; adding that I would come to that town with the phonograph record and help convince the courts of his sanity. It was time, too, I think I wrote, to alarm the people generally against this thing in their midst. It will be observed that at this moment of stress my own belief in all Akeley had told and claimed was virtually complete, though I did think his failure to get a picture of the dead monster was due not to any freak of Nature but to some excited slip of his own.

V.

Then, apparently crossing my incoherent note and reaching me Saturday afternoon, September 8th, came that curiously different and calming letter neatly typed on a new machine; that strange letter of reassurance and invitation which must have marked so prodigious a transition in the whole nightmare drama of the lonely hills. Again I will quote from memory—seeking for special reasons to preserve as much of the flavour of the style as I can. It was postmarked Bellows Falls, and the signature as well as the body of the letter was typed—as is frequent with beginners in typing. The text, though, was marvellously accurate for a tyro's work; and I concluded that Akeley must have used a machine at some previous period—perhaps in college. To say that the

letter relieved me would be only fair, yet beneath my relief lay a substratum of uneasiness. If Akeley had been sane in his terror, was he now sane in his deliverance? And the sort of “improved rapport” mentioned... what was it? The entire thing implied such a diametrical reversal of Akeley's previous attitude! But here is the substance of the text, carefully transcribed from a memory in which I take some pride.

Townshend, Vermont, Thursday, Sept. 6, 1928.

My dear Wilmarth:—

It gives me great pleasure to be able to set you at rest regarding all the silly things I've been writing you. I say “silly,” although by that I mean my frightened attitude rather than my descriptions of certain phenomena. Those phenomena are real and important enough; my mistake had been in establishing an anomalous attitude toward them.

I think I mentioned that my strange visitors were beginning to communicate with me, and to attempt such communication. Last night this exchange of speech became actual. In response to certain signals I admitted to the house a messenger from those outside—a fellow-human, let me hasten to say. He told me much that neither you nor I had even begun to guess, and showed clearly how totally we had misjudged and misinterpreted the purpose of the Outer Ones in maintaining their secret colony on this planet.

It seems that the evil legends about what they have offered to men, and what they wish in connection with the earth, are wholly the result of an ignorant misconception of allegorical speech—speech, of course, moulded by cultural backgrounds and thought-habits vastly different from anything we dream of. My own conjectures, I freely own, shot as widely past the mark as any of the guesses of illiterate farmers and savage Indians. What I had thought morbid and shameful and ignominious is in reality awesome and mind-expanding and even glorious—my previous estimate being merely a phase of man's eternal tendency to hate and fear and shrink from the utterly different.

Now I regret the harm I have inflicted upon these alien and incredible beings in the course of our nightly skirmishes. If only I had consented to talk peacefully and reasonably with them in the first place! But they bear me no grudge, their emotions being organised very differently from ours. It is their misfortune to have had as their human agents in Vermont some very inferior specimens—the late Walter Brown, for example. He prejudiced me vastly against them. Actually, they have never knowingly harmed men, but have often been cruelly wronged and spied upon by our species. There is a whole secret cult of evil men (a man of your mystical erudition will understand me when I link them with Hastur and the Yellow Sign) devoted to the purpose of tracking them down and injuring them on behalf of monstrous powers from other

dimensions. It is against these aggressors—not against normal humanity—that the drastic precautions of the Outer Ones are directed. Incidentally, I learned that many of our lost letters were stolen not by the Outer Ones but by the emissaries of this malign cult.

All that the Outer Ones wish of man is peace and non-molestation and an increasing intellectual rapport. This latter is absolutely necessary now that our inventions and devices are expanding our knowledge and motions, and making it more and more impossible for the Outer Ones' necessary outposts to exist secretly on this planet. The alien beings desire to know mankind more fully, and to have a few of mankind's philosophic and scientific leaders know more about them. With such an exchange of knowledge all perils will pass, and a satisfactory *modus vivendi* be established. The very idea of any attempt to enslave or degrade mankind is ridiculous.

As a beginning of this improved rapport, the Outer Ones have naturally chosen me—whose knowledge of them is already so considerable—as their primary interpreter on earth. Much was told me last night—facts of the most stupendous and vista-opening nature—and more will be subsequently communicated to me both orally and in writing. I shall not be called upon to make any trip outside just yet, though I shall probably wish to do so later on—employing special means and transcending everything which we have hitherto been accustomed to regard as human experience. My house will be

besieged no longer. Everything has reverted to normal, and the dogs will have no further occupation. In place of terror I have been given a rich boon of knowledge and intellectual adventure which few other mortals have ever shared.

The Outer Beings are perhaps the most marvellous organic things in or beyond all space and time—members of a cosmos-wide race of which all other life-forms are merely degenerate variants. They are more vegetable than animal, if these terms can be applied to the sort of matter composing them, and have a somewhat fungoid structure; though the presence of a chlorophyll-like substance and a very singular nutritive system differentiate them altogether from true cormophytic fungi. Indeed, the type is composed of a form of matter totally alien to our part of space—with electrons having a wholly different vibration-rate. That is why the beings cannot be photographed on the ordinary camera films and plates of our known universe, even though our eyes can see them. With proper knowledge, however, any good chemist could make a photographic emulsion which would record their images.

The genus is unique in its ability to traverse the heatless and airless interstellar void in full corporeal form, and some of its variants cannot do this without mechanical aid or curious surgical transpositions. Only a few species have the ether-resisting wings characteristic of the Vermont variety. Those inhabiting certain remote peaks in the Old World were brought in other

ways. Their external resemblance to animal life, and to the sort of structure we understand as material, is a matter of parallel evolution rather than of close kinship. Their brain-capacity exceeds that of any other surviving life-form, although the winged types of our hill country are by no means the most highly developed. Telepathy is their usual means of discourse, though we have rudimentary vocal organs which, after a slight operation (for surgery is an incredibly expert and everyday thing among them), can roughly duplicate the speech of such types of organism as still use speech.

Their main immediate abode is a still undiscovered and almost lightless planet at the very edge of our solar system—beyond Neptune, and the ninth in distance from the sun. It is, as we have inferred, the object mystically hinted at as “Yuggoth” in certain ancient and forbidden writings; and it will soon be the scene of a strange focusing of thought upon our world in an effort to facilitate mental rapport. I would not be surprised if astronomers become sufficiently sensitive to these thought-currents to discover Yuggoth when the Outer Ones wish them to do so. But Yuggoth, of course, is only the stepping-stone. The main body of the beings inhabits strangely organized abysses wholly beyond the utmost reach of any human imagination. The space-time globule which we recognize as the totality of all cosmic entity is only an atom in the genuine infinity which is theirs. And as much of this infinity as any human brain can hold is eventually

to be opened up to me, as it has been to not more than fifty other men since the human race has existed.

You will probably call this raving at first, Wilmarth, but in time you will appreciate the titanic opportunity I have stumbled upon. I want you to share as much of it as is possible, and to that end must tell you thousands of things that won't go on paper. In the past I have warned you not to come to see me. Now that all is safe, I take pleasure in rescinding that warning and inviting you.

Can't you make a trip up here before your college term opens? It would be marvelously delightful if you could. Bring along the phonograph record and all my letters to you as consultative data—we shall need them in piecing together the whole tremendous story. You might bring the Kodak prints, too, since I seem to have mislaid the negatives and my own prints in all this recent excitement. But what a wealth of facts I have to add to all this groping and tentative material—and what a stupendous device I have to supplement my additions!

Don't hesitate—I am free from espionage now, and you will not meet anything unnatural or disturbing. Just come along and let my car meet you at the Brattleboro station—prepare to stay as long as you can, and expect many an evening of discussion of things beyond all human conjecture. Don't tell anyone about it, of course—for this matter must not get to the promiscuous public.

The train service to Brattleboro is not bad—you can get a timetable in

Boston. Take the B. & M. to Greenfield, and then change for the brief remainder of the way. I suggest your taking the convenient 4:10 p.m.—standard—from Boston. This gets into Greenfield at 7:35, and at 9:19 a train leaves there which reaches Brattleboro at 10:01. That is weekdays. Let me know the date and I'll have my car on hand at the station.

Pardon this typed letter, but my handwriting has grown shaky of late, as you know, and I don't feel equal to long stretches of script. I got this new Corona in Brattleboro yesterday—it seems to work very well.

Awaiting word, and hoping to see you shortly with the phonograph record and all my letters—and the Kodak prints —

I am —

Yours in anticipation,

HENRY W. AKELEY

*TO ALBERT N. WILMARTH,
ESQ.,
MISKATONIC UNIVERSITY,
ARKHAM, MASS.*

The complexity of my emotions upon reading, re-reading, and pondering over this strange and unlooked-for letter is past adequate description. I have said that I was at once relieved and made uneasy, but this expresses only crudely the overtones of diverse and largely subconscious feelings which comprised both the relief and the uneasiness. To begin with, the thing was so antipodally at variance with the

whole chain of horrors preceding it—the change of mood from stark terror to cool complacency and even exultation was so unheralded, lightning-like, and complete! I could scarcely believe that a single day could so alter the psychological perspective of one who had written that final frenzied bulletin of Wednesday, no matter what relieving disclosures that day might have brought. At certain moments a sense of conflicting unrealities made me wonder whether this whole distantly reported drama of fantastic forces were not a kind of half-illusory dream created largely within my own mind. Then I thought of the phonograph record and gave way to still greater bewilderment.

The letter seemed so unlike anything which could have been expected! As I analysed my impression, I saw that it consisted of two distinct phases. First, granting that Akeley had been sane before and was still sane, the indicated change in the situation itself was so swift and unthinkable. And secondly, the change in Akeley's own manner, attitude, and language was so vastly beyond the normal or the predictable. The man's whole personality seemed to have undergone an insidious mutation—a mutation so deep that one could scarcely reconcile his two aspects with the supposition that both represented equal sanity. Word-choice, spelling—all were subtly different. And with my academic sensitiveness to prose style, I could

trace profound divergences in his commonest reactions and rhythm-responses. Certainly, the emotional cataclysm or revelation which could produce so radical an overturn must be an extreme one indeed! Yet in another way the letter seemed quite characteristic of Akeley. The same old passion for infinity—the same old scholarly inquisitiveness. I could not a moment—or more than a moment—credit the idea of spuriousness or malign substitution. Did not the invitation—the willingness to have me test the truth of the letter in person—prove its genuineness?

I did not retire Saturday night, but sat up thinking of the shadows and marvels behind the letter I had received. My mind, aching from the quick succession of monstrous conceptions it had been forced to confront during the last four months, worked upon this startling new material in a cycle of doubt and acceptance which repeated most of the steps experienced in facing the earlier wonders; till long before dawn a burning interest and curiosity had begun to replace the original storm of perplexity and uneasiness. Mad or sane, metamorphosed or merely relieved, the chances were that Akeley had actually encountered some stupendous change of perspective in his hazardous research; some change at once diminishing his danger—real or fancied—and opening dizzy new vistas of cosmic and superhuman knowledge. My own zeal for the unknown flared up

to meet his, and I felt myself touched by the contagion of the morbid barrier-breaking. To shake off the maddening and wearying limitations of time and space and natural law—to be linked with the vast outside—to come close to the nighted and abysmal secrets of the infinite and the ultimate—surely such a thing was worth the risk of one's life, soul, and sanity! And Akeley had said there was no longer any peril—he had invited me to visit him instead of warning me away as before. I tingled at the thought of what he might now have to tell me—there was an almost paralysing fascination in the thought of sitting in that lonely and lately-beleaguered farmhouse with a man who had talked with actual emissaries from outer space; sitting there with the terrible record and the pile of letters in which Akeley had summarised his earlier conclusions.

So late Sunday morning I telegraphed Akeley that I would meet him in Brattleboro on the following Wednesday—September 12th—if that date were convenient for him. In only one respect did I depart from his suggestions, and that concerned the choice of a train. Frankly, I did not feel like arriving in that haunted Vermont region late at night; so instead of accepting the train he chose I telephoned the station and devised another arrangement. By rising early and taking the 8:07 A.M. (standard) into Boston, I could catch the 9:25 for Greenfield; arriving

there at 12:22 noon. This connected exactly with a train reaching Brattleboro at 1:08 p.m.—a much more comfortable hour than 10:01 for meeting Akeley and riding with him into the close-packed, secret-guarding hills.

I mentioned this choice in my telegram, and was glad to learn in the reply which came toward evening that it had met with my prospective host's endorsement. His wire ran thus:

*ARRANGEMENT SATISFACTORY WILL MEET ONE EIGHT TRAIN WEDNESDAY DONT FORGET RECORD AND LETTERS AND PRINTS KEEP DESTINATION QUIET EXPECT GREAT REVELATIONS
AKELEY*

Receipt of this message in direct response to one sent to Akeley—and necessarily delivered to his house from the Townshend station either by official messenger or by a restored telephone service—removed any lingering subconscious doubts I may have had about the authorship of the perplexing letter. My relief was marked—indeed, it was greater than I could account for at the time; since all such doubts had been rather deeply buried. But I slept soundly and long that night, and was eagerly busy with preparations during the ensuing two days.

VI.

On Wednesday I started as agreed, taking with me a valise full of simple necessities and scientific data, including the hideous phonograph record, the Kodak prints, and the entire file of Akeley's correspondence. As requested, I had told no one where I was going; for I could see that the matter demanded utmost privacy, even allowing for its most favourable turns. The thought of actual mental contact with alien, outside entities was stupefying enough to my trained and somewhat prepared mind; and this being so, what might one think of its effect on the vast masses of uninformed laymen? I do not know whether dread or adventurous expectancy was uppermost in me as I changed trains at Boston and began the long westward run out of familiar regions into those I knew less thoroughly. Waltham—Concord—Ayer—Fitchburg—Gardner—Athol—

My train reached Greenfield seven minutes late, but the north-bound connecting express had been held. Transferring in haste, I felt a curious breathlessness as the cars rumbled on through the early afternoon sunlight into territories I had always read of but had never before visited. I knew I was entering an altogether older-fashioned and more primitive New England than the mechanised, urbanised coastal and

southern areas where all my life had been spent; an unspoiled, ancestral New England without the foreigners and factory-smoke, bill-boards and concrete roads, of the sections which modernity has touched. There would be odd survivals of that continuous native life whose deep roots make it the one authentic outgrowth of the landscape—the continuous native life which keeps alive strange ancient memories, and fertilises the soil for shadowy, marvellous, and seldom-mentioned beliefs.

Now and then I saw the blue Connecticut River gleaming in the sun, and after leaving Northfield we crossed it. Ahead loomed green and cryptical hills, and when the conductor came around I learned that I was at last in Vermont. He told me to set my watch back an hour, since the northern hill country will have no dealings with new-fangled daylight time schemes. As I did so it seemed to me that I was likewise turning the calendar back a century.

The train kept close to the river, and across in New Hampshire I could see the approaching slope of steep Wantastiquet, about which singular old legends cluster. Then streets appeared on my left, and a green island showed in the stream on my right. People rose and filed to the door, and I followed them. The car stopped, and I alighted beneath the long train-shed of the Brattleboro station.

Looking over the line of waiting

motors I hesitated a moment to see which one might turn out to be the Akeley Ford, but my identity was divined before I could take the initiative. And yet it was clearly not Akeley himself who advanced to meet me with an outstretched hand and a mellowly phrased query as to whether I was indeed Mr. Albert N. Wilmarth of Arkham. This man bore no resemblance to the bearded, grizzled Akeley of the snapshot; but was a younger and more urbane person, fashionably dressed, and wearing only a small, dark moustache. His cultivated voice held an odd and almost disturbing hint of vague familiarity, though I could not definitely place it in my memory.

As I surveyed him I heard him explaining that he was a friend of my prospective host's who had come down from Townshend in his stead. Akeley, he declared, had suffered a sudden attack of some asthmatic trouble, and did not feel equal to making a trip in the outdoor air. It was not serious, however, and there was to be no change in plans regarding my visit. I could not make out just how much this Mr. Noyes—as he announced himself—knew of Akeley's researches and discoveries, though it seemed to me that his casual manner stamped him as a comparative outsider. Remembering what a hermit Akeley had been, I was a trifle surprised at the ready availability of such a friend; but did not let my puzzlement deter me from entering the motor to which he

gestured me. It was not the small ancient car I had expected from Akeley's descriptions, but a large and immaculate specimen of recent pattern—apparently Noyes's own, and bearing Massachusetts license plates with the amusing "sacred codfish" device of that year. My guide, I concluded, must be a summer transient in the Townshend region.

Noyes climbed into the car beside me and started it at once. I was glad that he did not overflow with conversation, for some peculiar atmospheric tensity made me feel disinclined to talk. The town seemed very attractive in the afternoon sunlight as we swept up an incline and turned to the right into the main street. It drowsed like the older New England cities which one remembers from boyhood, and something in the collocation of roofs and steeples and chimneys and brick walls formed contours touching deep viol-strings of ancestral emotion. I could tell that I was at the gateway of a region half-bewitched through the piling-up of unbroken time-accumulations; a region where old, strange things have had a chance to grow and linger because they have never been stirred up.

As we passed out of Brattleboro my sense of constraint and foreboding increased, for a vague quality in the hill-crowded countryside with its towering, threatening, close-pressing green and granite slopes hinted at obscure secrets and immemorial survivals which might or

might not be hostile to mankind. For a time our course followed a broad, shallow river which flowed down from unknown hills in the north, and I shivered when my companion told me it was the West River. It was in this stream, I recalled from newspaper items, that one of the morbid crablike beings had been seen floating after the floods.

Gradually the country around us grew wilder and more deserted. Archaic covered bridges lingered fearsomely out of the past in pockets of the hills, and the half-abandoned railway track paralleling the river seemed to exhale a nebulously visible air of desolation. There were awesome sweeps of vivid valley where great cliffs rose, New England's virgin granite showing grey and austere through the verdure that scaled the crests. There were gorges where untamed streams leaped, bearing down toward the river the unimagined secrets of a thousand pathless peaks. Branching away now and then were narrow, half-concealed roads that bored their way through solid, luxuriant masses of forest among whose primal trees whole armies of elemental spirits might well lurk. As I saw these I thought of how Akeley had been molested by unseen agencies on his drives along this very route, and did not wonder that such things could be.

The quaint, sightly village of Newfane, reached in less than an hour, was our last link with that

world which man can definitely call his own by virtue of conquest and complete occupancy. After that we cast off all allegiance to immediate, tangible, and time-touched things, and entered a fantastic world of hushed unreality in which the narrow, ribbon-like road rose and fell and curved with an almost sentient and purposeful caprice amidst the tenantless green peaks and half-deserted valleys. Except for the sound of the motor, and the faint stir of the few lonely farms we passed at infrequent intervals, the only thing that reached my ears was the gurgling, insidious trickle of strange waters from numberless hidden fountains in the shadowy woods.

The nearness and intimacy of the dwarfed, domed hills now became veritably breath-taking. Their steepness and abruptness were even greater than I had imagined from hearsay, and suggested nothing in common with the prosaic objective world we know. The dense, unvisited woods on those inaccessible slopes seemed to harbour alien and incredible things, and I felt that the very outline of the hills themselves held some strange and aeon-forgotten meaning, as if they were vast hieroglyphs left by a rumoured titan race whose glories live only in rare, deep dreams. All the legends of the past, and all the stupefying imputations of Henry Akeley's letters and exhibits, welled up in my memory to heighten the atmosphere of tension and growing

menace. The purpose of my visit, and the frightful abnormalities it postulated struck at me all at once with a chill sensation that nearly over-balanced my ardour for strange delvings.

My guide must have noticed my disturbed attitude; for as the road grew wilder and more irregular, and our motion slower and more jolting, his occasional pleasant comments expanded into a steadier flow of discourse. He spoke of the beauty and weirdness of the country, and revealed some acquaintance with the folklore studies of my prospective host. From his polite questions it was obvious that he knew I had come for a scientific purpose, and that I was bringing data of some importance; but he gave no sign of appreciating the depth and awfulness of the knowledge which Akeley had finally reached.

His manner was so cheerful, normal, and urbane that his remarks ought to have calmed and reassured me; but oddly enough, I felt only the more disturbed as we bumped and veered onward into the unknown wilderness of hills and woods. At times it seemed as if he were pumping me to see what I knew of the monstrous secrets of the place, and with every fresh utterance that vague, teasing, baffling familiarity in his voice increased. It was not an ordinary or healthy familiarity despite the thoroughly wholesome and cultivated nature of the voice. I somehow linked it with forgotten

nightmares, and felt that I might go mad if I recognised it. If any good excuse had existed, I think I would have turned back from my visit. As it was, I could not well do so—and it occurred to me that a cool, scientific conversation with Akeley himself after my arrival would help greatly to pull me together.

Besides, there was a strangely calming element of cosmic beauty in the hypnotic landscape through which we climbed and plunged fantastically. Time had lost itself in the labyrinths behind, and around us stretched only the flowering waves of faery and the recaptured loveliness of vanished centuries—the hoary groves, the untainted pastures edged with gay autumnal blossoms, and at vast intervals the small brown farmsteads nestling amidst huge trees beneath vertical precipices of fragrant brier and meadow-grass. Even the sunlight assumed a supernal glamour, as if some special atmosphere or exhalation mantled the whole region. I had seen nothing like it before save in the magic vistas that sometimes form the backgrounds of Italian primitives. Sodoma and Leonardo conceived such expanses, but only in the distance, and through the vaultings of Renaissance arcades. We were now burrowing bodily through the midst of the picture, and I seemed to find in its necromancy a thing I had innately known or inherited and for which I had always been vainly searching.

Suddenly, after rounding an obtuse angle at the top of a sharp ascent, the car came to a standstill. On my left, across a well-kept lawn which stretched to the road and flaunted a border of whitewashed stones, rose a white, two-and-a-half-story house of unusual size and elegance for the region, with a congenes of contiguous or arcade-linked barns, sheds, and windmill behind and to the right. I recognised it at once from the snapshot I had received, and was not surprised to see the name of Henry Akeley on the galvanised-iron mailbox near the road. For some distance back of the house a level stretch of marshy and sparsely-wooded land extended, beyond which soared a steep, thickly-forested hillside ending in a jagged leafy crest. This latter, I knew, was the summit of Dark Mountain, half way up which we must have climbed already.

Alighting from the car and taking my valise, Noyes asked me to wait while he went in and notified Akeley of my advent. He himself, he added, had important business elsewhere, and could not stop for more than a moment. As he briskly walked up the path to the house I climbed out of the car myself, wishing to stretch my legs a little before settling down to a sedentary conversation. My feeling of nervousness and tension had risen to a maximum again now that I was on the actual scene of the morbid beleaguering described so hauntingly in Akeley's

letters, and I honestly dreaded the coming discussions which were to link me with such alien and forbidden worlds.

Close contact with the utterly bizarre is often more terrifying than inspiring, and it did not cheer me to think that this very bit of dusty road was the place where those monstrous tracks and that foetid green ichor had been found after moonless nights of fear and death. Idly I noticed that none of Akeley's dogs seemed to be about. Had he sold them all as soon as the Outer Ones made peace with him? Try as I might, I could not have the same confidence in the depth and sincerity of that peace which appeared in Akeley's final and queerly different letter. After all, he was a man of much simplicity and with little worldly experience. Was there not, perhaps, some deep and sinister undercurrent beneath the surface of the new alliance?

Led by my thoughts, my eyes turned downward to the powdery road surface which had held such hideous testimonies. The last few days had been dry, and tracks of all sorts cluttered the rutted, irregular highway despite the unfrequented nature of the district. With a vague curiosity I began to trace the outline of some of the heterogeneous impressions, trying meanwhile to curb the flights of macabre fancy which the place and its memories suggested. There was something menacing and uncomfortable in the

funereal stillness, in the muffled, subtle trickle of distant brooks, and in the crowding green peaks and black-wooded precipices that choked the narrow horizon.

And then an image shot into my consciousness which made those vague menaces and flights of fancy seem mild and insignificant indeed. I have said that I was scanning the miscellaneous prints in the road with a kind of idle curiosity—but all at once that curiosity was shockingly snuffed out by a sudden and paralyzing gust of active terror. For though the dust tracks were in general confused and overlapping, and unlikely to arrest any casual gaze, my restless vision had caught certain details near the spot where the path to the house joined the highway; and had recognised beyond doubt or hope the frightful significance of those details. It was not for nothing, alas, that I had pored for hours over the Kodak views of the Outer Ones' claw-prints which Akeley had sent. Too well did I know the marks of those loathsome nippers, and that hint of ambiguous direction which stamped the horrors as no creatures of this planet. No chance had been left me for merciful mistake. Here, indeed, in objective form before my own eyes, and surely made not many hours ago, were at least three marks which stood out blasphemously among the surprising plethora of blurred footprints leading to and from the Akeley farmhouse. They were the hellish

tracks of the living fungi from Yuggoth.

I pulled myself together in time to stifle a scream. After all, what more was there than I might have expected, assuming that I had really believed Akeley's letters? He had spoken of making peace with the things. Why, then, was it strange that some of them had visited his house? But the terror was stronger than the reassurance. Could any man be expected to look unmoved for the first time upon the claw-marks of animate beings from outer depths of space? Just then I saw Noyes emerge from the door and approach with a brisk step. I must, I reflected, keep command of myself, for the chances were that this genial friend knew nothing of Akeley's profoundest and most stupendous probings into the forbidden.

Akeley, Noyes hastened to inform me, was glad and ready to see me; although his sudden attack of asthma would prevent him from being a very competent host for a day or two. These spells hit him hard when they came, and were always accompanied by a debilitating fever and general weakness. He never was good for much while they lasted—had to talk in a whisper, and was very clumsy and feeble in getting about. His feet and ankles swelled, too, so that he had to bandage them like a gouty old beef-eater. Today he was in rather bad shape, so that I would have to attend very largely to my own needs; but he was none the less

eager for conversation. I would find him in the study at the left of the front hall—the room where the blinds were shut. He had to keep the sunlight out when he was ill, for his eyes were very sensitive.

As Noyes bade me adieu and rode off northward in his car I began to walk slowly toward the house. The door had been left ajar for me; but before approaching and entering I cast a searching glance around the whole place, trying to decide what had struck me as so intangibly queer about it. The barns and sheds looked trimly prosaic enough, and I noticed Akeley's battered Ford in its capacious, unguarded shelter. Then the secret of the queerness reached me. It was the total silence. Ordinarily a farm is at least moderately murmurous from its various kinds of livestock, but here all signs of life were missing. What of the hens and the dogs? The cows, of which Akeley had said he possessed several, might conceivably be out to pasture, and the dogs might possibly have been sold; but the absence of any trace of cackling or grunting was truly singular.

I did not pause long on the path, but resolutely entered the open house door and closed it behind me. It had cost me a distinct psychological effort to do so, and now that I was shut inside I had a momentary longing for precipitate retreat. Not that the place was in the least sinister in visual suggestion; on the contrary, I thought the graceful late-colonial hallway very tasteful and wholesome,

and admired the evident breeding of the man who had furnished it. What made me wish to flee was something very attenuated and indefinable. Perhaps it was a certain odd odour which I thought I noticed—though I well knew how common musty odours are in even the best of ancient farmhouses.

VII.

Refusing to let these cloudy qualms overmaster me, I recalled Noyes's instructions and pushed open the six-panelled, brass-latched white door on my left. The room beyond was darkened as I had known before; and as I entered it I noticed that the queer odour was stronger there. There likewise appeared to be some faint, half-imaginary rhythm or vibration in the air. For a moment the closed blinds allowed me to see very little, but then a kind of apologetic hacking or whispering sound drew my attention to a great easy-chair in the farther, darker corner of the room. Within its shadowy depths I saw the white blur of a man's face and hands; and in a moment I had crossed to greet the figure who had tried to speak. Dim though the light was, I perceived that this was indeed my host. I had studied the Kodak picture repeatedly, and there could be no mistake about this firm, weather-beaten face with the cropped, grizzled beard.

But as I looked again my recognition was mixed with sadness and anxiety; for certainly, his face was that of a very sick man. I felt that there must be something more than asthma behind that strained, rigid, immobile expression and unwinking glassy stare; and realised how terribly the strain of his frightful experiences must have told on him. Was it not enough to break any human being—even a younger man than this intrepid delver into the forbidden? The strange and sudden relief, I feared, had come too late to save him from something like a general breakdown. There was a touch of the pitiful in the limp, lifeless way his lean hands rested in his lap. He had on a loose dressing-gown, and was swathed around the head and high around the neck with a vivid yellow scarf or hood.

And then I saw that he was trying to talk in the same hacking whisper with which he had greeted me. It was a hard whisper to catch at first, since the grey moustache concealed all movements of the lips, and something in its timbre disturbed me greatly; but by concentrating my attention I could soon make out its purport surprisingly well. The accent was by no means a rustic one, and the language was even more polished than correspondence had led me to expect.

"Mr. Wilmarth, I presume? You must pardon my not rising. I am quite ill, as Mr. Noyes must have told you; but I could not resist having

you come just the same. You know what I wrote in my last letter—there is so much to tell you tomorrow when I shall feel better. I can't say how glad I am to see you in person after all our many letters. You have the file with you, of course? And the Kodak prints and records? Noyes put your valise in the hall—I suppose you saw it. For tonight I fear you'll have to wait on yourself to a great extent. Your room is upstairs—the one over this—and you'll see the bathroom door open at the head of the staircase. There's a meal spread for you in the dining-room—right through this door at your right—which you can take whenever you feel like it. I'll be a better host tomorrow—but just now weakness leaves me helpless.

"Make yourself at home—you might take out the letters and pictures and records and put them on the table here before you go upstairs with your bag. It is here that we shall discuss them—you can see my phonograph on that corner stand.

"No, thanks—there's nothing you can do for me. I know these spells of old. Just come back for a little quiet visiting before night, and then go to bed when you please. I'll rest right here—perhaps sleep here all night as I often do. In the morning I'll be far better able to go into the things we must go into. You realise, of course, the utterly stupendous nature of the matter before us. To us, as to only a few men on this earth, there will be opened up gulfs of time

and space and knowledge beyond anything within the conception of human science or philosophy.

"Do you know that Einstein is wrong, and that certain objects and forces can move with a velocity greater than that of light? With proper aid I expect to go backward and forward in time, and actually see and feel the earth of remote past and future epochs. You can't imagine the degree to which those beings have carried science. There is nothing they can't do with the mind and body of living organisms. I expect to visit other planets, and even other stars and galaxies. The first trip will be to Yuggoth, the nearest world fully peopled by the beings. It is a strange dark orb at the very rim of our solar system—unknown to earthly astronomers as yet. But I must have written you about this. At the proper time, you know, the beings there will direct thought-currents toward us and cause it to be discovered—or perhaps let one of their human allies give the scientists a hint.

"There are mighty cities on Yuggoth—great tiers of terraced towers built of black stone like the specimen I tried to send you. That came from Yuggoth. The sun shines there no brighter than a star, but the beings need no light. They have other subtler senses, and put no windows in their great houses and temples. Light even hurts and hampers and confuses them, for it does not exist at all in the black cosmos outside time and space where

they came from originally. To visit Yuggoth would drive any weak man mad—yet I am going there. The black rivers of pitch that flow under those mysterious cyclopean bridges—things built by some elder race extinct and forgotten before the beings came to Yuggoth from the ultimate voids—ought to be enough to make any man a Dante or Poe if he can keep sane long enough to tell what he has seen.

"But remember—that dark world of fungoid gardens and windowless cities isn't really terrible. It is only to us that it would seem so. Probably this world seemed just as terrible to the beings when they first explored it in the primal age. You know they were here long before the fabulous epoch of Cthulhu was over, and remember all about sunken R'lyeh when it was above the waters. They've been inside the earth, too—there are openings which human beings know nothing of—some of them in these very Vermont hills—and great worlds of unknown life down there; blue-litten K'n-yan, red-litten Yoth, and black, lightless N'kai. It's from N'kai that frightful Tsathoggua came—you know, the amorphous, toad-like god-creature mentioned in the Pnakotic Manuscripts and the Necronomicon and the Commoriom myth-cycle preserved by the Atlantean high-priest Klarkash-Ton.

"But we will talk of all this later on. It must be four or five o'clock by this time. Better bring the stuff from

your bag, take a bite, and then come back for a comfortable chat."

Very slowly I turned and began to obey my host; fetching my valise, extracting and depositing the desired articles, and finally ascending to the room designated as mine. With the memory of that roadside claw-print fresh in my mind, Akeley's whispered paragraphs had affected me queerly; and the hints of familiarity with this unknown world of fungous life—forbidden Yuggoth—made my flesh creep more than I cared to own. I was tremendously sorry about Akeley's illness, but had to confess that his hoarse whisper had a hateful as well as pitiful quality. If only he wouldn't gloat so about Yuggoth and its black secrets!

My room proved a very pleasant and well-furnished one, devoid alike of the musty odour and disturbing sense of vibration; and after leaving my valise there I descended again to greet Akeley and take the lunch he had set out for me. The dining-room was just beyond the study, and I saw that a kitchen ell extended still farther in the same direction. On the dining-table an ample array of sandwiches, cake, and cheese awaited me, and a Thermos-bottle beside a cup and saucer testified that hot coffee had not been forgotten. After a well-relished meal I poured myself a liberal cup of coffee, but found that the culinary standard had suffered a lapse in this one detail. My first spoonful revealed a faintly unpleasant acrid taste, so that I did not take

more. Throughout the lunch I thought of Akeley sitting silently in the great chair in the darkened next room.

Once I went in to beg him to share the repast, but he whispered that he could eat nothing as yet. Later on, just before he slept, he would take some malted milk—all he ought to have that day.

After lunch I insisted on clearing the dishes away and washing them in the kitchen sink—incidentally emptying the coffee which I had not been able to appreciate. Then returning to the darkened study I drew up a chair near my host's corner and prepared for such conversation as he might feel inclined to conduct. The letters, pictures, and record were still on the large centre-table, but for the nonce we did not have to draw upon them. Before long I forgot even the bizarre odour and curious suggestions of vibration.

I have said that there were things in some of Akeley's letters—especially the second and most voluminous one—which I would not dare to quote or even form into words on paper. This hesitancy applies with still greater force to the things I heard whispered that evening in the darkened room among the lonely hills. Of the extent of the cosmic horrors unfolded by that raucous voice I cannot even hint. He had known hideous things before, but what he had learned since making his pact with the Outside Things was almost too much for sanity to

bear. Even now I absolutely refused to believe what he implied about the constitution of ultimate infinity, the juxtaposition of dimensions, and the frightful position of our known cosmos of space and time in the unending chain of linked cosmos-atoms which makes up the immediate super-cosmos of curves, angles, and material and semi-material electronic organisation.

Never was a sane man more dangerously close to the arcana of basic entity—never was an organic brain nearer to utter annihilation in the chaos that transcends form and force and symmetry. I learned whence Cthulhu first came, and why half the great temporary stars of history had flared forth. I guessed—from hints which made even my informant pause timidly—the secret behind the Magellanic Clouds and globular nebulae, and the black truth veiled by the immemorial allegory of Tao. The nature of the Doels was plainly revealed, and I was told the essence (though not the source) of the Hounds of Tindalos. The legend of Yig, Father of Serpents, remained figurative no longer, and I started with loathing when told of the monstrous nuclear chaos beyond angled space which the Necronomicon had mercifully cloaked under the name of Azathoth. It was shocking to have the foulest nightmares of secret myth cleared up in concrete terms whose stark, morbid hatefulness exceeded the boldest hints of ancient and

mediaeval mystics. Ineluctably I was led to believe that the first whisperers of these accursed tales must have had discourse with Akeley's Outer Ones, and perhaps have visited outer cosmic realms as Akeley now proposed visiting them.

I was told of the Black Stone and what it implied, and was glad that it had not reached me. My guesses about those hieroglyphics had been all too correct! And yet Akeley now seemed reconciled to the whole fiendish system he had stumbled upon; reconciled and eager to probe farther into the monstrous abyss. I wondered what beings he had talked with since his last letter to me, and whether many of them had been as human as that first emissary he had mentioned. The tension in my head grew insufferable, and I built up all sorts of wild theories about that queer, persistent odour and those insidious hints of vibration in the darkened room.

Night was falling now, and as I recalled what Akeley had written me about those earlier nights I shuddered to think there would be no moon. Nor did I like the way the farmhouse nestled in the lee of that colossal forested slope leading up to Dark Mountain's unvisited crest. With Akeley's permission I lighted a small oil lamp, turned it low, and set it on a distant bookcase beside the ghostly bust of Milton; but afterward I was sorry I had done so, for it made my host's strained, immobile face and listless hands look damnably

abnormal and corpselike. He seemed half-incapable of motion, though I saw him nod stiffly once in awhile.

After what he had told, I could scarcely imagine what profounder secrets he was saving for the morrow; but at last it developed that his trip to Yuggoth and beyond—and my own possible participation in it—was to be the next day's topic. He must have been amused by the start of horror I gave at hearing a cosmic voyage on my part proposed, for his head wobbled violently when I showed my fear. Subsequently he spoke very gently of how human beings might accomplish—and several times had accomplished—the seemingly impossible flight across the interstellar void. It seemed that complete human bodies did not indeed make the trip, but that the prodigious surgical, biological, chemical, and mechanical skill of the Outer Ones had found a way to convey human brains without their concomitant physical structure.

There was a harmless way to extract a brain, and a way to keep the organic residue alive during its absence. The bare, compact cerebral matter was then immersed in an occasionally replenished fluid within an ether-tight cylinder of a metal mined in Yuggoth, certain electrodes reaching through and connecting at will with elaborate instruments capable of duplicating the three vital faculties of sight, hearing, and speech. For the winged fungus-beings to carry the brain-cylinders

intact through space was an easy matter. Then, on every planet covered by their civilisation, they would find plenty of adjustable faculty-instruments capable of being connected with the encased brains; so that after a little fitting these travelling intelligences could be given a full sensory and articulate life—albeit a bodiless and mechanical one—at each stage of their journeying through and beyond the space-time continuum. It was as simple as carrying a phonograph record about and playing it wherever a phonograph of corresponding make exists. Of its success there could be no question. Akeley was not afraid. Had it not been brilliantly accomplished again and again?

For the first time one of the inert, wasted hands raised itself and pointed stiffly to a high shelf on the farther side of the room. There, in a neat row, stood more than a dozen cylinders of a metal I had never seen before—cylinders about a foot high and somewhat less in diameter, with three curious sockets set in an isosceles triangle over the front convex surface of each. One of them was linked at two of the sockets to a pair of singular-looking machines that stood in the background. Of their purport I did not need to be told, and I shivered as with ague. Then I saw the hand point to a much nearer corner where some intricate instruments with attached cords and plugs, several of them much like the two devices on the shelf behind the cylin-

ders, were huddled together.

"There are four kinds of instruments here, Wilmarth," whispered the voice. "Four kinds—three faculties each—makes twelve pieces in all. You see there are four different sorts of beings represented in those cylinders up there. Three humans, six fungoid beings who can't navigate space corporeally, two beings from Neptune (God! if you could see the body this type has on its own planet!), and the rest entities from the central caverns of an especially interesting dark star beyond the galaxy. In the principal outpost inside Round Hill you'll now and then find more cylinders and machines—cylinders of extra-cosmic brains with different senses from any we know—allies and explorers from the uttermost Outside—and special machines for giving them impressions and expression in the several ways suited at once to them and to the comprehensions of different types of listeners. Round Hill, like most of the beings' main outposts all through the various universes, is a very cosmopolitan place. Of course, only the more common types have been lent to me for experiment.

"Here—take the three machines I point to and set them on the table. That tall one with the two glass lenses in front—then the box with the vacuum tubes and sound-ing-board—and now the one with the metal disc on top. Now for the cylinder with the label 'B-67' pasted on it. Just stand in that Windsor

chair to reach the shelf. Heavy? Never mind! Be sure of the number—B-67. Don't bother that fresh, shiny cylinder joined to the two testing instruments—the one with my name on it. Set B-67 on the table near where you've put the machines—and see that the dial switch on all three machines is jammed over to the extreme left.

"Now connect the cord of the lens machine with the upper socket on the cylinder—there! Join the tube machine to the lower left-hand socket, and the disc apparatus to the outer socket. Now move all the dial switches on the machine over to the extreme right—first the lens one, then the disc one, and then the tube one. That's right. I might as well tell you that this is a human being—just like any of us. I'll give you a taste of some of the others tomorrow."

To this day I do not know why I obeyed those whispers so slavishly, or whether I thought Akeley was mad or sane. After what had gone before, I ought to have been prepared for anything; but this mechanical mummary seemed so like the typical vagaries of crazed inventors and scientists that it struck a chord of doubt which even the preceding discourse had not excited. What the whisperer implied was beyond all human belief—yet were not the other things still farther beyond, and less preposterous only because of their remoteness from tangible concrete proof?

As my mind reeled amidst this

chaos, I became conscious of a mixed grating and whirring from all three of the machines lately linked to the cylinder—a grating and whirring which soon subsided into a virtual noiselessness. What was about to happen? Was I to hear a voice? And if so, what proof would I have that it was not some cleverly concocted radio device talked into by a concealed but closely watched speaker? Even now I am unwilling to swear just what I heard, or just what phenomenon really took place before me. But something certainly seemed to take place.

To be brief and plain, the machine with the tubes and sound-box began to speak, and with a point and intelligence which left no doubt that the speaker was actually present and observing us. The voice was loud, metallic, lifeless, and plainly mechanical in every detail of its production. It was incapable of inflection or expressiveness, but scraped and rattled on with a deadly precision and deliberation.

"Mr. Wilmarth," it said, "I hope I do not startle you. I am a human being like yourself, though my body is now resting safely under proper vitalising treatment inside Round Hill, about a mile and a half east of here. I myself am here with you—my brain is in that cylinder and I see, hear, and speak through these electronic vibrators. In a week I am going across the void as I have been many times before, and I expect to have the pleasure of Mr. Akeley's company.

I wish I might have yours as well; for I know you by sight and reputation, and have kept close track of your correspondence with our friend. I am, of course, one of the men who have become allied with the outside beings visiting our planet. I met them first in the Himalayas, and have helped them in various ways. In return they have given me experiences such as few men have ever had.

"Do you realise what it means when I say I have been on thirty-seven different celestial bodies—planets, dark stars, and less definable objects—including eight outside our galaxy and two outside the curved cosmos of space and time? All this has not harmed me in the least. My brain has been removed from my body by fissions so adroit that it would be crude to call the operation surgery. The visiting beings have methods which make these extractions easy and almost normal—and one's body never ages when the brain is out of it. The brain, I may add, is virtually immortal with its mechanical faculties and a limited nourishment supplied by occasional changes of the preserving fluid.

"Altogether, I hope most heartily that you will decide to come with Mr. Akeley and me. The visitors are eager to know men of knowledge like yourself, and to show them the great abysses that most of us have had to dream about in fanciful ignorance. It may seem strange at first to meet them, but I know you will be

above minding that. I think Mr. Noyes will go along, too—the man who doubtless brought you up here in his car. He has been one of us for years—I suppose you recognised his voice as one of those on the record Mr. Akeley sent you."

At my violent start the speaker paused a moment before concluding. "So Mr. Wilmarth, I will leave the matter to you; merely adding that a man with your love of strangeness and folklore ought never to miss such a chance as this. There is nothing to fear. All transitions are painless; and there is much to enjoy in a wholly mechanised state of sensation. When the electrodes are disconnected, one merely drops off into a sleep of especially vivid and fantastic dreams.

"And now, if you don't mind, we might adjourn our session till tomorrow. Good night—just turn all the switches back to the left; never mind the exact order, though you might let the lens machine be last. Good night, Mr. Akeley—treat our guest well! Ready now with those switches?"

That was all. I obeyed mechanically and shut off all three switches, though dazed with doubt of everything that had occurred. My head was still reeling as I heard Akeley's whispering voice telling me that I might leave all the apparatus on the table just as it was. He did not essay any comment on what had happened, and indeed no comment could have conveyed much to my burdened

faculties. I heard him telling me I could take the lamp to use in my room, and deduced that he wished to rest alone in the dark. It was surely time he rested, for his discourse of the afternoon and evening had been such as to exhaust even a vigorous man. Still dazed, I bade my host good night and went upstairs with the lamp, although I had an excellent pocket flashlight with me.

I was glad to be out of that downstairs study with the queer odour and vague suggestions of vibration, yet could not of course escape a hideous sense of dread and peril and cosmic abnormality as I thought of the place I was in and the forces I was meeting. The wild, lonely region, the black, mysteriously forested slope towering so close behind the house; the footprint in the road, the sick, motionless whisperer in the dark, the hellish cylinders and machines, and above all the invitations to strange surgery and stranger voyagings—these things, all so new and in such sudden succession, rushed in on me with a cumulative force which sapped my will and almost undermined my physical strength.

To discover that my guide Noyes was the human celebrant in that monstrous bygone Sabbath-ritual on the phonograph record was a particular shock, though I had previously sensed a dim, repellent familiarity in his voice. Another special shock came from my own attitude toward my host whenever I paused to analyse

it; for much as I had instinctively liked Akeley as revealed in his correspondence, I now found that he filled me with a distinct repulsion. His illness ought to have excited my pity; but instead, it gave me a kind of shudder. He was so rigid and inert and corpselike—and that incessant whispering was so hateful and unhuman!

It occurred to me that this whispering was different from anything else of the kind I had ever heard; that, despite the curious motionlessness of the speaker's moustache-screened lips, it had a latent strength and carrying-power remarkable for the wheezing of an asthmatic. I had been able to understand the speaker when wholly across the room, and once or twice it had seemed to me that the faint but penetrant sounds represented not so much weakness as deliberate repression—for what reason I could not guess. From the first I had felt a disturbing quality in their timbre. Now, when I tried to weigh the matter, I thought I could trace this impression to a kind of subconscious familiarity like that which had made Noyes's voice so hazily ominous. But when or where I had encountered the thing it hinted at, was more than I could tell.

One thing was certain—I would not spend another night here. My scientific zeal had vanished amidst fear and loathing, and I felt nothing now but a wish to escape from this net of morbidity and unnatural revelation. I knew enough now. It must

indeed be true that strange cosmic linkages do exist—but such things are surely not meant for normal human beings to meddle with.

Blasphemous influences seemed to surround me and press chokingly upon my senses. Sleep, I decided, would be out of the question; so I merely extinguished the lamp and threw myself on the bed fully dressed. No doubt it was absurd, but I kept ready for some unknown emergency; gripping in my right hand the revolver I had brought along, and holding the pocket flashlight in my left. Not a sound came from below, and I could imagine how my host was sitting there with cadaverous stiffness in the dark.

Somewhere I heard a clock ticking, and was vaguely grateful for the normality of the sound. It reminded me, though, of another thing about the region which disturbed me—the total absence of animal life. There were certainly no farm beasts about, and now I realised that even the accustomed night-noises of wild living things were absent. Except for the sinister trickle of distant unseen waters, that stillness was anomalous—interplanetary—and I wondered what star-spawned, intangible blight could be hanging over the region. I recalled from old legends that dogs and other beasts had always hated the Outer Ones, and thought of what those tracks in the road might mean.

VIII.

Do not ask me how long my unexpected lapse into slumber lasted, or how much of what ensued was sheer dream. If I tell you that I awakened at a certain time, and heard and saw certain things, you will merely answer that I did not wake then; and that everything was a dream until the moment when I rushed out of the house, stumbled to the shed where I had seen the old Ford, and seized that ancient vehicle for a mad, aimless race over the haunted hills which at last landed me—after hours of jolting and winding through forest-threatened labyrinths—in a village which turned out to be Townshend.

You will also, of course, discount everything else in my report; and declare that all the pictures, record-sounds, cylinder-and-machine sounds, and kindred evidences were bits of pure deception practiced on me by the missing Henry Akeley. You will even hint that he conspired with other eccentrics to carry out a silly and elaborate hoax—that he had the express shipment removed at Keene, and that he had Noyes make that terrifying wax record. It is odd, though, that Noyes has not ever yet been identified; that he was unknown at any of the villages near Akeley's place, though he must have been frequently in the region. I wish I had stopped to memorize the license-number of his car—or

perhaps it is better after all that I did not. For I, despite all you can say, and despite all I sometimes try to say to myself, know that loathsome outside influences must be lurking there in the half-unknown hills—and that those influences have spies and emissaries in the world of men. To keep as far as possible from such influences and such emissaries is all that I ask of life in future.

When my frantic story sent a sheriff's posse out to the farmhouse, Akeley was gone without leaving a trace. His loose dressing gown, yellow scarf, and foot-bandages lay on the study floor near his corner easy-chair, and it could not be decided whether any of his other apparel had vanished with him. The dogs and livestock were indeed missing, and there were some curious bullet-holes both on the house's exterior and on some of the walls within; but beyond this nothing unusual could be detected. No cylinders or machines, none of the evidences I had brought in my valise, no queer odour or vibration-sense, no foot-prints in the road, and none of the problematical things I glimpsed at the very last.

I stayed a week in Brattleboro after my escape, making inquiries among people of every kind who had known Akeley; and the results convince me that the matter is no figment of dream or delusion. Akeley's queer purchase of dogs and ammunition and chemicals, and the

cutting of his telephone wires, are matters of record; while all who knew him—including his son in California—concede that his occasional remarks on strange studies had a certain consistency. Solid citizens believe he was mad, and unhesitatingly pronounce all reported evidences mere hoaxes devised with insane cunning and perhaps abetted by eccentric associates; but the lowlier country folk sustain his statements in every detail. He had showed some of these rustics his photographs and black stone, and had played the hideous record for them; and they all said the footprints and buzzing voice were like those described in ancestral legends.

They said, too, that suspicious sights and sounds had been noticed increasingly around Akeley's house after he found the black stone, and that the place was now avoided by everybody except the mail man and other casual, tough-minded people. Dark Mountain and Round Hill were both notoriously haunted spots, and I could find no one who had ever closely explored either. Occasional disappearances of natives throughout the district's history were well attested, and these now included the semi-vagabond Walter Brown, whom Akeley's letters had mentioned. I even came upon one farmer who thought he had personally glimpsed one of the queer bodies at flood-time in the swollen West River, but his tale was too confused to be really valuable.

When I left Brattleboro I resolved never to go back to Vermont, and I feel quite certain I shall keep my resolution. Those wild hills are surely the outpost of a frightful cosmic race—as I doubt all the less since reading that a new ninth planet has been glimpsed beyond Neptune, just as those influences had said it would be glimpsed. Astronomers, with a hideous appropriateness they little suspect, have named this thing “Pluto.” I feel, beyond question, that it is nothing less than nighted Yuggoth—and I shiver when I try to figure out the real reason why its monstrous denizens wish it to be known in this way at this especial time. I vainly try to assure myself that these daemoniac creatures are not gradually leading up to some new policy hurtful to the earth and its normal inhabitants.

But I have still to tell of the ending of that terrible night in the farmhouse. As I have said, I did finally drop into a troubled doze; a doze filled with bits of dream which involved monstrous landscape-glimpses. Just what awaked me I cannot yet say, but that I did indeed awake at this given point I feel very certain. My first confused impression was of stealthily creaking floor-boards in the hall outside my door, and of a clumsy, muffled fumbling at the latch. This, however, ceased almost at once; so that my really clear impressions begin with the voices heard from the study below. There seemed to be several

speakers, and I judged that they were controversially engaged.

By the time I had listened a few seconds I was broad awake, for the nature of the voices was such as to make all thought of sleep ridiculous. The tones were curiously varied, and no one who had listened to that accursed phonograph record could harbour any doubts about the nature of at least two of them. Hideous though the idea was, I knew that I was under the same roof with nameless things from abysmal space; for those two voices were unmistakably the blasphemous buzzings which the Outside Beings used in their communication with men. The two were individually different—different in pitch, accent, and tempo—but they were both of the same damnable general kind.

A third voice was indubitably that of a mechanical utterance-machine connected with one of the detached brains in the cylinders. There was as little doubt about that as about the buzzings; for the loud, metallic, lifeless voice of the previous evening, with its inflectionless, expressionless scraping and rattling, and its impersonal precision and deliberation, had been utterly unforgettable. For a time I did not pause to question whether the intelligence behind the scraping was the identical one which had formerly talked to me; but shortly afterward I reflected that any brain would emit vocal sounds of the same quality if linked to the same mechanical

speech-producer; the only possible differences being in language, rhythm, speed, and pronunciation. To complete the eldritch colloquy there were two actually human voices—one the crude speech of an unknown and evidently rustic man, and the other the suave Bostonian tones of my erstwhile guide Noyes.

As I tried to catch the words which the stoutly-fashioned floor so bafflingly intercepted, I was also conscious of a great deal of stirring and scratching and shuffling in the room below; so that I could not escape the impression that it was full of living beings—many more than the few whose speech I could single out. The exact nature of this stirring is extremely hard to describe, for very few good bases of comparison exist. Objects seemed now and then to move across the room like conscious entities; the sound of their footfalls having something about it like a loose, hard-surfaced clattering—as of the contact of ill-coordinated surfaces of horn or hard rubber. It was, to use a more concrete but less accurate comparison, as if people with loose, splintery wooden shoes were shambling and rattling about on the polished board floor. Of the nature and appearance of those responsible for the sounds, I did not care to speculate.

Before long I saw that it would be impossible to distinguish any connected discourse. Isolated words—including the names of Akeley and myself—now and then

floated up, especially when uttered by the mechanical speech-producer; but their true significance was lost for want of continuous context. Today I refuse to form any definite deductions from them, and even their frightful effect on me was one of suggestion rather than of revelation. A terrible and abnormal conclave, I felt certain, was assembled below me; but for what shocking deliberations I could not tell. It was curious how this unquestioned sense of the malign and the blasphemous pervaded me despite Akeley’s assurances of the Outsider’s friendliness.

With patient listening I began to distinguish clearly between voices, even though I could not grasp much of what any of the voices said. I seemed to catch certain typical emotions behind some of the speakers. One of the buzzing voices, for example, held an unmistakable note of authority; whilst the mechanical voice, notwithstanding its artificial loudness and regularity, seemed to be in a position of subordination and pleading. Noyes’s tones exuded a kind of conciliatory atmosphere. The others I could make no attempt to interpret. I did not hear the familiar whisper of Akeley, but well knew that such a sound could never penetrate the solid flooring of my room.

I will try to set down some of the few disjointed words and other sounds I caught, labelling the speakers of the words as best I know how. It was from the

speech-machine that I first picked up a few recognisable phrases.

THE SPEECH-MACHINE: ... brought it on myself... sent back the letters and the record... end on it... taken in... seeing and hearing... damn you... impersonal force, after all... fresh, shiny cylinder... great God...

FIRST BUZZING VOICE: ... time we stopped... small and human... Akeley... brain... saying...

SECOND BUZZING VOICE: Nyarlathotep... Wilmarth... records and letters... cheap imposture...

NOYES: ... (an unpronounceable word or name, possibly N'gah-Kthun) harmless... peace... couple of weeks... theatrical... told you that before...

FIRST BUZZING VOICE: ... no reason... original plan... effects... Noyes can watch Round Hill... fresh cylinder... Noyes's car...

NOYES: ... well... all yours... down here... rest... place...

(Several Voices at Once in Indistinguishable Speech)

(Many Footsteps, Including the Peculiar Loose Stirring or Clattering)

(A Curious Sort of Flapping Sound)

(The Sound of an Automobile Starting and Receding)

(Silence)

That is the substance of what my ears brought me as I lay rigid upon that strange upstairs bed in the haunted farmhouse among the daemonic hills—lay there fully dressed, with a revolver clenched in my right hand and a pocket flashlight gripped in my

left. I became, as I have said, broad awake; but a kind of obscure paralysis nevertheless kept me inert till long after the last echoes of the sounds had died away. I heard the wooden, deliberate ticking of the ancient Connecticut clock somewhere far below, and at last made out the irregular snoring of a sleeper. Akeley must have dozed off after the strange session, and I could well believe that he needed to do so.

Just what to think or what to do was more than I could decide. After all, what had I heard beyond things which previous information might have led me to expect? Had I not known that the nameless Outsiders were now freely admitted to the farmhouse? No doubt Akeley had been surprised by an unexpected visit from them. Yet something in that fragmentary discourse had chilled me immeasurably, raised the most grotesque and horrible doubts, and made me wish fervently that I might wake up and prove everything a dream. I think my subconscious mind must have caught something which my consciousness has not yet recognised. But what of Akeley? Was he not my friend, and would he not have protested if any harm were meant me? The peaceful snoring below seemed to cast ridicule on all my suddenly intensified fears.

Was it possible that Akeley had been imposed upon and used as a lure to draw me into the hills with the letters and pictures and phonograph record? Did those beings mean to engulf us both in a common destruction because we had come to know

too much? Again I thought of the abruptness and unnaturalness of that change in the situation which must have occurred between Akeley's penultimate and final letters. Something, my instinct told me, was terribly wrong. All was not as it seemed. That acrid coffee which I refused—had there not been an attempt by some hidden, unknown entity to drug it? I must talk to Akeley at once, and restore his sense of proportion. They had hypnotised him with their promises of cosmic revelations, but now he must listen to reason. We must get out of this before it would be too late. If he lacked the will power to make the break for liberty, I would supply it. Or if I could not persuade him to go, I could at least go myself. Surely he would let me take his Ford and leave it in a garage in Brattleboro. I had noticed it in the shed—the door being left unlocked and open now that peril was deemed past—and I believed there was a good chance of its being ready for instant use. That momentary dislike of Akeley which I had felt during and after the evening's conversation was all gone now. He was in a position much like my own, and we must stick together. Knowing his indisposed condition, I hated to wake him at this juncture, but I knew that I must. I could not stay in this place till morning as matters stood.

At last I felt able to act, and stretched myself vigorously to regain command of my muscles. Arising with a caution more impulsive than deliberate, I found and donned my hat, took

my valise, and started downstairs with the flashlight's aid. In my nervousness I kept the revolver clutched in my right hand, being able to take care of both valise and flashlight with my left. Why I exerted these precautions I do not really know, since I was even then on my way to awaken the only other occupant of the house.

As I half-tiptoeed down the creaking stairs to the lower hall I could hear the sleeper more plainly, and noticed that he must be in the room on my left—the living-room I had not entered. On my right was the gaping blackness of the study in which I had heard the voices. Pushing open the unlatched door of the living-room I traced a path with the flashlight toward the source of the snoring, and finally turned the beams on the sleeper's face. But in the next second I hastily turned them away and commenced a catlike retreat to the hall, my caution this time springing from reason as well as from instinct. For the sleeper on the couch was not Akeley at all, but my quondam guide Noyes.

Just what the real situation was, I could not guess; but common sense told me that the safest thing was to find out as much as possible before arousing anybody. Regaining the hall, I silently closed and latched the living-room door after me; thereby lessening the chances of awakening Noyes. I now cautiously entered the dark study, where I expected to find Akeley, whether asleep or awake, in the great corner chair which was evidently his

favorite resting-place. As I advanced, the beams of my flashlight caught the great centre-table, revealing one of the hellish cylinders with sight and hearing machines attached, and with a speech machine standing close by, ready to be connected at any moment. This, I reflected, must be the encased brain I had heard talking during the frightful conference; and for a second I had a perverse impulse to attach the speech machine and see what it would say.

It must, I thought, be conscious of my presence even now; since the sight and hearing attachments could not fail to disclose the rays of my flashlight and the faint creaking of the floor beneath my feet. But in the end I did not dare meddle with the thing. I idly saw that it was the fresh shiny cylinder with Akeley's name on it, which I had noticed on the shelf earlier in the evening and which my host had told me not to bother. Looking back at that moment, I can only regret my timidity and wish that I had boldly caused the apparatus to speak. God knows what mysteries and horrible doubts and questions of identity it might have cleared up! But then, it may be merciful that I let it alone.

From the table I turned my flashlight to the corner where I thought Akeley was, but found to my perplexity that the great easy-chair was empty of any human occupant asleep or awake. From the seat to the floor there trailed voluminously the familiar old dressing-gown, and near it on the floor lay the yellow scarf and the huge foot-bandages I had thought so odd. As I

hesitated, striving to conjecture where Akeley might be, and why he had so suddenly discarded his necessary sick-room garments, I observed that the queer odour and sense of vibration were no longer in the room. What had been their cause? Curiously it occurred to me that I had noticed them only in Akeley's vicinity. They had been strongest where he sat, and wholly absent except in the room with him or just outside the doors of that room. I paused, letting the flashlight wander about the dark study and racking my brain for explanations of the turn affairs had taken.

Would to Heaven I had quietly left the place before allowing that light to rest again on the vacant chair. As it turned out, I did not leave quietly; but with a muffled shriek which must have disturbed, though it did not quite awake, the sleeping sentinel across the hall. That shriek, and Noyes's still-unbroken snore, are the last sounds I ever heard in that morbidity-choked farmhouse beneath the black-wooded crest of haunted mountain—that focus of transcosmic horror amidst the lonely green hills and curse-muttering brooks of a spectral rustic land.

It is a wonder that I did not drop flashlight, valise, and revolver in my wild scramble, but somehow I failed to lose any of these. I actually managed to get out of that room and that house without making any further noise, to drag myself and my belongings safely into the old Ford in the shed, and to set that archaic vehicle in motion

toward some unknown point of safety in the black, moonless night. The ride that followed was a piece of delirium out of Poe or Rimbaud or the drawings of Dore, but finally I reached Townshend. That is all. If my sanity is still unshaken, I am lucky. Sometimes I fear what the years will bring, especially since that new planet Pluto has been so curiously discovered.

As I have implied, I let my flashlight return to the vacant easy-chair after its circuit of the room; then noticing for the first time the presence of certain objects in the seat, made inconspicuous by the adjacent loose folds of the empty dressing-gown. These are the objects, three in number, which the investigators did not find when they came later on. As I said at the outset, there was nothing of actual visual horror about them. The trouble was in what they led one to infer. Even now I have my moments of half-doubt—moments in which I half-accept the scepticism of those who attribute my whole experience to dream and nerves and delusion.

The three things were damnably clever constructions of their kind, and were furnished with ingenious metallic clamps to attach them to organic developments of which I dare not form any conjecture. I hope—devoutly hope—that they were the waxen products of a master artist, despite what my inmost fears tell me. Great God! That whisperer in darkness with its morbid odour and vibrations! Sorcerer, emissary, changeling, outsider... that hideous repressed buzzing... and all

the time in that fresh, shiny cylinder on the shelf... poor devil... "Prodigious surgical, biological, chemical, and mechanical skill..."

For the things in the chair, perfect to the last, subtle detail of microscopic resemblance—or identity—were the face and hands of Henry Wentworth Akeley.

1931:

A CRISIS *of* CONFIDENCE.

[RETURN TO TABLE OF CONTENTS]

As 1931 began, H.P. Lovecraft's penchant for self-criticism was starting to become a real problem for him. Through his extensive travels and even more extensive correspondence, he'd become the center of a vast and growing circle of friends. His particular literary style was developing into something really special and virtually inimitable. But as fast as his abilities developed, his standards were rising even faster, so that it seemed to him that everything he did was derivative hackwork and hyperadjectival garbage. His sensitivity to criticism, always high, got even worse as the 1930s wore on, to the point that he actually produced barely anything of his own for the last

three years of his life. He simply psyched himself out.

The worst of that was in the future, though. In 1931, Lovecraft was immersed in one of the longest, most intricate, and iconic of his tales: *At the Mountains of Madness*. Ironically, this story would precipitate something like a crisis of confidence in Lovecraft, because when he submitted it to *Weird Tales*, editor Farnsworth Wright rejected it, saying it was too long. It's not clear why this had the effect on Lovecraft that it did; Wright, as he well knew, was almost predictable in his reactions to unusual stories. He'd reject them, brood for a month or two, ask for them back and publish them. So Lovecraft should have been used to rejection slips from Wright.

Lovecraft scholar S.T. Joshi suggests that this rejection hit Lovecraft unusually hard because a book publisher had just rejected a collection of his short stories that the publisher had actually solicited from him—something that happened several times in Lovecraft's life. But this particular rejection came with an explanatory letter claiming the stories had been too uniformly macabre and too unsubtle for consideration. This last item was the cruelest cut, as Lovecraft justly prided himself on his subtext management, and he blamed Farnsworth for encouraging him to dumb down his work so the average *Weird Tales* reader would not be confused. Thus, Joshi posits, when Farnsworth rejected *At the Mountains of Madness* it came just as he was blaming Farnsworth for ruining his chances at rising above the pulp markets. He'd remade himself for Farnsworth, which had caused the book publishers to reject him, and now Farnsworth was rejecting him too.

It's very likely Joshi is correct. Joshi also suggests the fundamental problem afflicting Lovecraft in 1931 was that his work had become too science-fictiony for the weird-fiction publishers, and too weird-fictiony for the science-fiction publishers. He is almost certainly right about that, too.

In any case, after getting Farnsworth's rejection, Lovecraft announced plans to give up writing

fiction entirely (luckily, he changed his mind later), and that summer he did almost as much moping as he did traveling and ghost-writing. Farnsworth, who had no idea what he'd done, spent the subsequent five years trying to get Lovecraft to start sending him stories again. And he was so psyched out that, after he pounded out *The Shadow over Innsmouth* at the end of that year, only the timely intervention of August Derleith may have saved it from the match. Derleith badgered Lovecraft into typing it up. Eventually it was published, but Lovecraft filed it away and tried to forget it existed.

He had become his own most merciless critic.

At the MOUNTAINS of MADNESS.

[RETURN TO TABLE OF CONTENTS]

I.

I am forced into speech because men of science have refused to follow my advice without knowing why. It is altogether against my will that I tell my reasons for opposing this contemplated invasion of the antarctic—with its vast fossil hunt and its wholesale boring and melting of the ancient ice caps. And I am the more reluctant because my warning may be in vain.

Doubt of the real facts, as I must reveal them, is inevitable; yet, if I suppressed what will seem extravagant and incredible, there would be nothing left. The hitherto withheld photographs, both ordinary and aerial, will count in my favor, for they

are damnably vivid and graphic. Still, they will be doubted because of the great lengths to which clever fakery can be carried. The ink drawings, of course, will be jeered at as obvious impostures, notwithstanding a strangeness of technique which art experts ought to remark and puzzle over.

In the end I must rely on the judgment and standing of the few scientific leaders who have, on the one hand, sufficient independence of thought to weigh my data on its own hideously convincing merits or in the light of certain primordial and highly baffling myth-cycles; and on the other hand, sufficient influence to deter the exploring world in general from any rash and over-ambitious program in the region of

those mountains of madness. It is an unfortunate fact that relatively obscure men like myself and my associates, connected only with a small university, have little chance of making an impression where matters of a wildly bizarre or highly controversial nature are concerned.

It is further against us that we are not, in the strictest sense, specialists in the fields which came primarily to be concerned. As a geologist, my object in leading the Miskatonic University Expedition was wholly that of securing deep-level specimens of rock and soil from various parts of the antarctic continent, aided by the remarkable drill devised by Professor Frank H. Pabodie of our engineering department. I had no wish to be a pioneer in any other field than this, but I did hope that the use of this new mechanical appliance at different points along previously explored paths would bring to light materials of a sort hitherto unreachd by the ordinary methods of collection.

Pabodie's drilling apparatus, as the public already knows from our reports, was unique and radical in its lightness, portability, and capacity to combine the ordinary artesian drill principle with the principle of the small circular rock drill in such a way as to cope quickly with strata of varying hardness. Steel head, jointed rods, gasoline motor, collapsible wooden derrick, dynamiting paraphernalia, cording, rubbish-removal auger, and sectional piping

for bores five inches wide and up to one thousand feet deep all formed, with needed accessories, no greater load than three seven-dog sledges could carry. This was made possible by the clever aluminum alloy of which most of the metal objects were fashioned. Four large Dornier aeroplanes, designed especially for the tremendous altitude flying necessary on the antarctic plateau and with added fuel-warming and quick-starting devices worked out by Pabodie, could transport our entire expedition from a base at the edge of the great ice barrier to various suitable inland points, and from these points a sufficient quota of dogs would serve us.

We planned to cover as great an area as one antarctic season—or longer, if absolutely necessary—would permit, operating mostly in the mountain ranges and on the plateau south of Ross Sea; regions explored in varying degree by Shackleton, Amundsen, Scott, and Byrd. With frequent changes of camp, made by aeroplane and involving distances great enough to be of geological significance, we expected to unearth a quite unprecedented amount of material—especially in the pre-Cambrian strata of which so narrow a range of antarctic specimens had previously been secured. We wished also to obtain as great as possible a variety of the upper fossiliferous rocks, since the primal life history of this bleak realm of ice and death is of the highest

importance to our knowledge of the earth's past. That the antarctic continent was once temperate and even tropical, with a teeming vegetable and animal life of which the lichens, marine fauna, arachnida, and penguins of the northern edge are the only survivals, is a matter of common information; and we hoped to expand that information in variety, accuracy, and detail. When a simple boring revealed fossiliferous signs, we would enlarge the aperture by blasting, in order to get specimens of suitable size and condition.

Our borings, of varying depth according to the promise held out by the upper soil or rock, were to be confined to exposed, or nearly exposed, land surfaces—these inevitably being slopes and ridges because of the mile or two-mile thickness of solid ice overlying the lower levels. We could not afford to waste drilling the depth of any considerable amount of mere glaciation, though Pabodie had worked out a plan for sinking copper electrodes in thick clusters of borings and melting off limited areas of ice with current from a gasoline-driven dynamo. It is this plan—which we could not put into effect except experimentally on an expedition such as ours—that the coming Starkweather-Moore Expedition proposes to follow, despite the warnings I have issued since our return from the antarctic.

The public knows of the Miskatonic Expedition through our

frequent wireless reports to the Arkham Advertiser and Associated Press, and through the later articles of Pabodie and myself. We consisted of four men from the University—Pabodie, Lake of the biology department, Atwood of the physics department—also a meteorologist—and myself, representing geology and having nominal command—besides sixteen assistants: seven graduate students from Miskatonic and nine skilled mechanics. Of these sixteen, twelve were qualified aeroplane pilots, all but two of whom were competent wireless operators. Eight of them understood navigation with compass and sextant, as did Pabodie, Atwood, and I. In addition, of course, our two ships—wooden ex-whalers, reinforced for ice conditions and having auxiliary steam—were fully manned.

The Nathaniel Derby Pickman Foundation, aided by a few special contributions, financed the expedition; hence our preparations were extremely thorough, despite the absence of great publicity. The dogs, sledges, machines, camp materials, and unassembled parts of our five planes were delivered in Boston, and there our ships were loaded. We were marvelously well-equipped for our specific purposes, and in all matters pertaining to supplies, regimen, transportation, and camp construction we profited by the excellent example of our many recent and exceptionally brilliant predecessors. It was the unusual number and fame

of these predecessors which made our own expedition—ample though it was—so little noticed by the world at large.

As the newspapers told, we sailed from Boston Harbor on September 2nd, 1930, taking a leisurely course down the coast and through the Panama Canal, and stopping at Samoa and Hobart, Tasmania, at which latter place we took on final supplies. None of our exploring party had ever been in the polar regions before, hence we all relied greatly on our ship captains—J. B. Douglas, commanding the brig Arkham, and serving as commander of the sea party, and Georg Thorfinnssen, commanding the barque Miskatonic—both veteran whalers in antarctic waters.

As we left the inhabited world behind, the sun sank lower and lower in the north, and stayed longer and longer above the horizon each day. At about 62° South Latitude we sighted our first icebergs—table-like objects with vertical sides—and just before reaching the antarctic circle, which we crossed on October 20th with appropriately quaint ceremonies, we were considerably troubled with field ice. The falling temperature bothered me considerably after our long voyage through the tropics, but I tried to brace up for the worse rigors to come. On many occasions the curious atmospheric effects enchanted me vastly; these including a strikingly vivid mirage—the first I had ever seen—in which distant

bergs became the battlements of unimaginable cosmic castles.

Pushing through the ice, which was fortunately neither extensive nor thickly packed, we regained open water at South Latitude 67°, East Longitude 175°. On the morning of October 26th a strong land blink appeared on the south, and before noon we all felt a thrill of excitement at beholding a vast, lofty, and snow-clad mountain chain which opened out and covered the whole vista ahead. At last we had encountered an outpost of the great unknown continent and its cryptic world of frozen death. These peaks were obviously the Admiralty Range discovered by Ross, and it would now be our task to round Cape Adare and sail down the east coast of Victoria Land to our contemplated base on the shore of McMurdo Sound, at the foot of the volcano Erebus in South Latitude 77° 9'.

The last lap of the voyage was vivid and fancy-stirring. Great barren peaks of mystery loomed up constantly against the west as the low northern sun of noon or the still lower horizon-grazing southern sun of midnight poured its hazy reddish rays over the white snow, bluish ice and water lanes, and black bits of exposed granite slope. Through the desolate summits swept raging, intermittent gusts of the terrible antarctic wind; whose cadences sometimes held vague suggestions of a wild and half-sentient musical piping, with notes extending over a

wide range, and which for some subconscious mnemonic reason seemed to me disquieting and even dimly terrible. Something about the scene reminded me of the strange and disturbing Asian paintings of Nicholas Roerich, and of the still stranger and more disturbing descriptions of the evilly fabled plateau of Leng which occur in the dreaded Necronomicon of the mad Arab Abdul Alhazred. I was rather sorry, later on, that I had ever looked into that monstrous book at the college library.

On the 7th of November, sight of the westward range having been temporarily lost, we passed Franklin Island; and the next day descried the cones of Mts. Erebus and Terror on Ross Island ahead, with the long line of the Parry Mountains beyond. There now stretched off to the east the low, white line of the great ice barrier, rising perpendicularly to a height of two hundred feet like the rocky cliffs of Quebec, and marking the end of southward navigation. In the afternoon we entered McMurdo Sound and stood off the coast in the lee of smoking Mt. Erebus. The scoriac peak towered up some twelve thousand, seven hundred feet against the eastern sky, like a Japanese print of the sacred Fujiyama, while beyond it rose the white, ghostlike height of Mt. Terror, ten thousand, nine hundred feet in altitude, and now extinct as a volcano.

Puffs of smoke from Erebus came intermittently, and one of the

graduate assistants—a brilliant young fellow named Danforth—pointed out what looked like lava on the snowy slope, remarking that this mountain, discovered in 1840, had undoubtedly been the source of Poe's image when he wrote seven years later:

*The lavas that restlessly roll
Their sulphurous currents down
Yaanek
In the ultimate climes of the pole—
That groan as they roll down Mount
Yaanek
In the realms of the boreal pole.*

Danforth was a great reader of bizarre material, and had talked a good deal of Poe. I was interested myself because of the antarctic scene of Poe's only long story—the disturbing and enigmatical Arthur Gordon Pym. On the barren shore, and on the lofty ice barrier in the background, myriads of grotesque penguins squawked and flapped their fins, while many fat seals were visible on the water, swimming or sprawling across large cakes of slowly drifting ice.

Using small boats, we effected a difficult landing on Ross Island shortly after midnight on the morning of the 9th, carrying a line of cable from each of the ships and preparing to unload supplies by means of a breeches-buoy arrangement. Our sensations on first treading Antarctic soil were poignant and complex, even though at this

particular point the Scott and Shackleton expeditions had preceded us. Our camp on the frozen shore below the volcano's slope was only a provisional one, headquarters being kept aboard the Arkham. We landed all our drilling apparatus, dogs, sledges, tents, provisions, gasoline tanks, experimental ice-melting outfit, cameras, both ordinary and aerial, aeroplane parts, and other accessories, including three small portable wireless outfits—besides those in the planes—capable of communicating with the Arkham's large outfit from any part of the antarctic continent that we would be likely to visit. The ship's outfit, communicating with the outside world, was to convey press reports to the Arkham Advertiser's powerful wireless station on Kingsport Head, Massachusetts. We hoped to complete our work during a single antarctic summer; but if this proved impossible, we would winter on the Arkham, sending the Miskatonic north before the freezing of the ice for another summer's supplies.

I need not repeat what the newspapers have already published about our early work: of our ascent of Mt. Erebus; our successful mineral borings at several points on Ross Island and the singular speed with which Pabodie's apparatus accomplished them, even through solid rock layers; our provisional test of the small ice-melting equipment; our perilous ascent of the great barrier with sledges and supplies;

and our final assembling of five huge aeroplanes at the camp atop the barrier. The health of our land party—twenty men and fifty-five Alaskan sledge dogs—was remarkable, though of course we had so far encountered no really destructive temperatures or windstorms. For the most part, the thermometer varied between zero and 20° or 25° above, and our experience with New England winters had accustomed us to rigors of this sort. The barrier camp was semi-permanent, and destined to be a storage cache for gasoline, provisions, dynamite, and other supplies. Only four of our planes were needed to carry the actual exploring material, the fifth being left with a pilot and two men from the ships at the storage cache to form a means of reaching us from the Arkham in case all our exploring planes were lost. Later, when not using all the other planes for moving apparatus, we would employ one or two in a shuttle transportation service between this cache and another permanent base on the great plateau from six hundred to seven hundred miles southward, beyond Beardmore Glacier. Despite the almost unanimous accounts of appalling winds and tempests that pour down from the plateau, we determined to dispense with intermediate bases, taking our chances in the interest of economy and probable efficiency.

Wireless reports have spoken of the breathtaking, four-hour, nonstop

flight of our squadron on November 21st over the lofty shelf ice, with vast peaks rising on the west, and the unfathomed silences echoing to the sound of our engines. Wind troubled us only moderately, and our radio compasses helped us through the one opaque fog we encountered. When the vast rise loomed ahead, between Latitudes 83° and 84°, we knew we had reached Beardmore Glacier, the largest valley glacier in the world, and that the frozen sea was now giving place to a frowning and mountainous coast line. At last we were truly entering the white, aeon-dead world of the ultimate south. Even as we realized it we saw the peak of Mt. Nansen in the eastern distance, towering up to its height of almost fifteen thousand feet.

The successful establishment of the southern base above the glacier in Latitude 86° 7', East Longitude 174° 23', and the phenomenally rapid and effective borings and blastings made at various points reached by our sledge trips and short aeroplane flights, are matters of history; as is the arduous and triumphant ascent of Mt. Nansen by Pabodie and two of the graduate students—Gedney and Carroll—on December 13-15. We were some eight thousand, five hundred feet above sea-level, and when experimental drillings revealed solid ground only twelve feet down through the snow and ice at certain points, we made considerable use of the small melting apparatus and

sunk bores and performed dynamiting at many places where no previous explorer had ever thought of securing mineral specimens. The pre-Cambrian granites and beacon sandstones thus obtained confirmed our belief that this plateau was homogeneous, with the great bulk of the continent to the west, but somewhat different from the parts lying eastward below South America—which we then thought to form a separate and smaller continent divided from the larger one by a frozen junction of Ross and Weddell Seas, though Byrd has since disproved the hypothesis.

In certain of the sandstones, dynamited and chiseled after boring revealed their nature, we found some highly interesting fossil markings and fragments; notably ferns, seaweeds, trilobites, crinoids, and such mollusks as linguellae and gastropods—all of which seemed of real significance in connection with the region's primordial history. There was also a queer triangular, striated marking, about a foot in greatest diameter, which Lake pieced together from three fragments of slate brought up from a deep-blasted aperture. These fragments came from a point to the westward, near the Queen Alexandra Range; and Lake, as a biologist, seemed to find their curious marking unusually puzzling and provocative, though to my geological eye it looked not unlike some of the ripple effects reasonably common in the

sedimentary rocks. Since slate is no more than a metamorphic formation into which a sedimentary stratum is pressed, and since the pressure itself produces odd distorting effects on any markings which may exist, I saw no reason for extreme wonder over the striated depression.

On January 6th, 1931, Lake, Pabodie, Danforth, the other six students, and myself flew directly over the south pole in two of the great planes, being forced down once by a sudden high wind, which, fortunately, did not develop into a typical storm. This was, as the papers have stated, one of several observation flights, during others of which we tried to discern new topographical features in areas unreached by previous explorers. Our early flights were disappointing in this latter respect, though they afforded us some magnificent examples of the richly fantastic and deceptive mirages of the polar regions, of which our sea voyage had given us some brief foretastes. Distant mountains floated in the sky as enchanted cities, and often the whole white world would dissolve into a gold, silver, and scarlet land of Dunsanian dreams and adventurous expectancy under the magic of the low midnight sun. On cloudy days we had considerable trouble in flying owing to the tendency of snowy earth and sky to merge into one mystical opalescent void with no visible horizon to mark the junction of the two.

At length we resolved to carry

out our original plan of flying five hundred miles eastward with all four exploring planes and establishing a fresh sub-base at a point which would probably be on the smaller continental division, as we mistakenly conceived it. Geological specimens obtained there would be desirable for purposes of comparison. Our health so far had remained excellent—lime juice well offsetting the steady diet of tinned and salted food, and temperatures generally above zero enabling us to do without our thickest furs. It was now midsummer, and with haste and care we might be able to conclude work by March and avoid a tedious wintering through the long antarctic night. Several savage windstorms had burst upon us from the west, but we had escaped damage through the skill of Atwood in devising rudimentary aeroplane shelters and windbreaks of heavy snow blocks, and reinforcing the principal camp buildings with snow. Our good luck and efficiency had indeed been almost uncanny.

The outside world knew, of course, of our program, and was told also of Lake's strange and dogged insistence on a westward—or rather, northwestward—prospecting trip before our radical shift to the new base. It seems that he had pondered a great deal, and with alarmingly radical daring, over that triangular striated marking in the slate; reading into it certain contradictions in nature and geological period which

whetted his curiosity to the utmost, and made him avid to sink more borings and blastings in the west-stretching formation to which the exhumed fragments evidently belonged. He was strangely convinced that the marking was the print of some bulky, unknown, and radically unclassifiable organism of considerably advanced evolution, notwithstanding that the rock which bore it was of so vastly ancient a date—Cambrian if not actually pre-Cambrian—as to preclude the probable existence not only of all highly evolved life, but of any life at all above the unicellular or at most the trilobite stage. These fragments, with their odd marking, must have been five hundred million to a thousand million years old.

II.

Popular imagination, I judge, responded actively to our wireless bulletins of Lake's start northwestward into regions never trodden by human foot or penetrated by human imagination, though we did not mention his wild hopes of revolutionizing the entire sciences of biology and geology. His preliminary sledging and boring journey of January 11th to 18th with Pabodie and five others—marred by the loss of two dogs in an upset when crossing one of the great pressure ridges in the ice—had brought up more and more of the Archaean slate; and

even I was interested by the singular profusion of evident fossil markings in that unbelievably ancient stratum. These markings, however, were of very primitive life forms involving no great paradox except that any life forms should occur in rock as definitely pre-Cambrian as this seemed to be; hence I still failed to see the good sense of Lake's demand for an interlude in our time-saving program—an interlude requiring the use of all four planes, many men, and the whole of the expedition's mechanical apparatus. I did not, in the end, veto the plan, though I decided not to accompany the northwestward party despite Lake's plea for my geological advice. While they were gone, I would remain at the base with Pabodie and five men and work out final plans for the eastward shift. In preparation for this transfer, one of the planes had begun to move up a good gasoline supply from McMurdo Sound; but this could wait temporarily. I kept with me one sledge and nine dogs, since it is unwise to be at any time without possible transportation in an utterly tenantless world of aeon-long death.

Lake's sub-expedition into the unknown, as everyone will recall, sent out its own reports from the shortwave transmitters on the planes; these being simultaneously picked up by our apparatus at the southern base and by the Arkham at McMurdo Sound, whence they were relayed to

the outside world on wave lengths up to fifty meters. The start was made January 22nd at 4 a.m., and the first wireless message we received came only two hours later, when Lake spoke of descending and starting a small-scale ice-melting and bore at a point some three hundred miles away from us. Six hours after that a second and very excited message told of the frantic, beaver-like work whereby a shallow shaft had been sunk and blasted, culminating in the discovery of slate fragments with several markings approximately like the one which had caused the original puzzlement.

Three hours later a brief bulletin announced the resumption of the flight in the teeth of a raw and piercing gale; and when I dispatched a message of protest against further hazards, Lake replied curtly that his new specimens made any hazard worth taking. I saw that his excitement had reached the point of mutiny, and that I could do nothing to check this headlong risk of the whole expedition's success; but it was appalling to think of his plunging deeper and deeper into that treacherous and sinister white immensity of tempests and unfathomed mysteries which stretched off for some fifteen hundred miles to the half-known, half-suspected coast line of Queen Mary and Knox Lands.

Then, in about an hour and a half more, came that doubly excited

message from Lake's moving plane, which almost reversed my sentiments and made me wish I had accompanied the party:

10:05 p.m. On the wing. After snowstorm, have spied mountain range ahead higher than any hitherto seen. May equal Himalayas, allowing for height of plateau. Probable Latitude 76° 15', Longitude 113° 10' E. Reaches far as can see to right and left. Suspicion of two smoking cones. All peaks black and bare of snow. Gale blowing off them impedes navigation.

After that Pabodie, the men and I hung breathlessly over the receiver. Thought of this titanic mountain rampart seven hundred miles away inflamed our deepest sense of adventure; and we rejoiced that our expedition, if not ourselves personally, had been its discoverers. In half an hour Lake called us again:

Moulton's plane forced down on plateau in foothills, but nobody hurt and perhaps can repair. Shall transfer essentials to other three for return or further moves if necessary, but no more heavy plane travel needed just now. Mountains surpass anything in imagination. Am going up scouting in Carroll's plane, with all weight out. You can't imagine anything like this. Highest peaks must go over thirty-five thousand feet. Everest out of the running. Atwood to work out height with theodolite while Carroll and I go up. Probably wrong about cones, for

formations look stratified. Possibly pre-Cambrian slate with other strata mixed in. Queer skyline effects—regular sections of cubes clinging to highest peaks. Whole thing marvelous in red-gold light of low sun. Like land of mystery in a dream or gateway to forbidden world of untrodden wonder. Wish you were here to study.

Though it was technically sleeping-time, not one of us listeners thought for a moment of retiring. It must have been a good deal the same at McMurdo Sound, where the supply cache and the Arkham were also getting the messages; for Captain Douglas gave out a call congratulating everybody on the important find, and Sherman, the cache operator, seconded his sentiments. We were sorry, of course, about the damaged aeroplane, but hoped it could be easily mended. Then, at 11 p.m., came another call from Lake:

Up with Carroll over highest foothills. Don't dare try really tall peaks in present weather, but shall later. Frightful work climbing, and hard going at this altitude, but worth it. Great range fairly solid, hence can't get any glimpses beyond. Main summits exceed Himalayas, and very queer. Range looks like pre-Cambrian slate, with plain signs of many other upheaved strata. Was wrong about volcanism. Goes farther in either direction than we can see. Swept clear of snow above about twenty-one thousand feet. Odd

formations on slopes of highest mountains. Great low square blocks with exactly vertical sides, and rectangular lines of low, vertical ramparts, like the old Asian castles clinging to steep mountains in Roerich's paintings. Impressive from distance. Flew close to some, and Carroll thought they were formed of smaller separate pieces, but that is probably weathering. Most edges crumbled and rounded off as if exposed to storms and climate changes for millions of years. Parts, especially upper parts, seem to be of lighter-colored rock than any visible strata on slopes proper, hence of evidently crystalline origin. Close flying shows many cave-mouths, some unusually regular in outline, square or semi-circular. You must come and investigate. Think I saw rampart squarely on top of one peak. Height seems about thirty thousand to thirty-five thousand feet. Am up twenty-one thousand, five hundred myself, in devilish, gnawing cold. Wind whistles and pipes through passes and in and out of caves, but no flying danger so far.

From then on for another half hour Lake kept up a running fire of comment, and expressed his intention of climbing some of the peaks on foot. I replied that I would join him as soon as he could send a plane, and that Pabodie and I would work out the best gasoline plan—just where and how to concentrate our supply in view of the expedition's altered character. Obviously, Lake's boring operations, as well as his aeroplane activities, would require a great

deal for the new base which he planned to establish at the foot of the mountains; and it was possible that the eastward flight might not be made, after all, this season. In connection with this business I called Captain Douglas and asked him to get as much as possible out of the ships and up the barrier with the single dog team we had left there. A direct route across the unknown region between Lake and McMurdo Sound was what we really ought to establish.

Lake called me later to say that he had decided to let the camp stay where Moulton's plane had been forced down, and where repairs had already progressed somewhat. The ice sheet was very thin, with dark ground here and there visible, and he would sink some borings and blasts at that very point before making any sledge trips or climbing expeditions. He spoke of the inflexible majesty of the whole scene, and the queer state of his sensations at being in the lee of vast, silent pinnacles whose ranks shot up like a wall reaching the sky at the world's rim. Atwood's theodolite observations had placed the height of the five tallest peaks at from thirty thousand to thirty-four thousand feet. The windswept nature of the terrain clearly disturbed Lake, for it argued the occasional existence of prodigious gales, violent beyond anything we had so far encountered. His camp lay a little more than five miles from where the higher foothills rose

abruptly. I could almost trace a note of subconscious alarm in his words—flashed across a glacial void of seven hundred miles—as he urged that we all hasten with the matter and get the strange, new region disposed of as soon as possible. He was about to rest now, after a continuous day's work of almost unparalleled speed, strenuousness, and results.

In the morning I had a three-cornered wireless talk with Lake and Captain Douglas at their widely separated bases. It was agreed that one of Lake's planes would come to my base for Pabodie, the five men, and myself, as well as for all the fuel it could carry. The rest of the fuel question, depending on our decision about an easterly trip, could wait for a few days, since Lake had enough for immediate camp heat and borings. Eventually the old southern base ought to be restocked, but if we postponed the easterly trip we would not use it till the next summer, and, meanwhile, Lake must send a plane to explore a direct route between his new mountains and McMurdo Sound.

Pabodie and I prepared to close our base for a short or long period, as the case might be. If we wintered in the antarctic we would probably fly straight from Lake's base to the Arkham without returning to this spot. Some of our conical tents had already been reinforced by blocks of hard snow, and now we decided to complete the job of making a permanent village. Owing to a very liberal

tent supply, Lake had with him all that his base would need, even after our arrival. I wirelessly that Pabodie and I would be ready for the north-westward move after one day's work and one night's rest.

Our labors, however, were not very steady after 4 p.m., for about that time Lake began sending in the most extraordinary and excited messages. His working day had started unpropitiously, since an aeroplane survey of the nearly-exposed rock surfaces showed an entire absence of those Archaean and primordial strata for which he was looking, and which formed so great a part of the colossal peaks that loomed up at a tantalizing distance from the camp. Most of the rocks glimpsed were apparently Jurassic and Comanchian sandstones and Permian and Triassic schists, with now and then a glossy black outcropping suggesting a hard and slaty coal. This rather discouraged Lake, whose plans all hinged on unearthing specimens more than five hundred million years older. It was clear to him that in order to recover the Archaean slate vein in which he had found the odd markings, he would have to make a long sledge trip from these foothills to the steep slopes of the gigantic mountains themselves.

He had resolved, nevertheless, to do some local boring as part of the expedition's general program; hence he set up the drill and put five men to work with it while the rest finished settling the camp and

repairing the damaged aeroplane. The softest visible rock—a sandstone about a quarter of a mile from the camp—had been chosen for the first sampling; and the drill made excellent progress without much supplementary blasting. It was about three hours afterward, following the first really heavy blast of the operation, that the shouting of the drill crew was heard; and that young Gedney—the acting foreman—rushed into the camp with the startling news.

They had struck a cave. Early in the boring the sandstone had given place to a vein of Comanchian limestone, full of minute fossil cephalopods, corals, echini, and spirifera, and with occasional suggestions of siliceous sponges and marine vertebrate bones—the latter probably of teleosts, sharks, and ganoids. This, in itself, was important enough, as affording the first vertebrate fossils the expedition had yet secured; but when shortly afterward the drill head dropped through the stratum into apparent vacancy, a wholly new and doubly intense wave of excitement spread among the excavators. A good-sized blast had laid open the subterranean secret; and now, through a jagged aperture perhaps five feet across and three feet thick, there yawned before the avid searchers a section of shallow limestone hollowing worn more than fifty million years ago by the trickling ground waters of a bygone tropic world.

The hollowed layer was not

more than seven or eight feet deep but extended off indefinitely in all directions and had a fresh, slightly moving air which suggested its membership in an extensive subterranean system. Its roof and floor were abundantly equipped with large stalactites and stalagmites, some of which met in columnar form: but important above all else was the vast deposit of shells and bones, which in places nearly choked the passage. Washed down from unknown jungles of Mesozoic tree ferns and fungi, and forests of Tertiary cycads, fan palms, and primitive angiosperms, this osseous medley contained representatives of more Cretaceous, Eocene, and other animal species than the greatest paleontologist could have counted or classified in a year. Mollusks, crustacean armor, fishes, amphibians, reptiles, birds, and early mammals—great and small, known and unknown. No wonder Gedney ran back to the camp shouting, and no wonder everyone else dropped work and rushed headlong through the biting cold to where the tall derrick marked a new-found gateway to secrets of inner earth and vanished aeons.

When Lake had satisfied the first keen edge of his curiosity, he scribbled a message in his notebook and had young Moulton run back to the camp to dispatch it by wireless. This was my first word of the discovery, and it told of the identification of early shells, bones of

ganoids and placoderms, remnants of labyrinthodonts and thecodonts, great mosasaur skull fragments, dinosaur vertebrae and armor plates, pterodactyl teeth and wing bones, Archaeopteryx debris, Miocene sharks' teeth, primitive bird skulls, and other bones of archaic mammals such as palaeotheres, Xiphodonts, Eohippi, Oreodonts, and titanotheres. There was nothing as recent as a mastodon, elephant, true camel, deer, or bovine animal; hence Lake concluded that the last deposits had occurred during the Oligocene Age, and that the hollowed stratum had lain in its present dried, dead, and inaccessible state for at least thirty million years.

On the other hand, the prevalence of very early life forms was singular in the highest degree. Though the limestone formation was, on the evidence of such typical imbedded fossils as ventriculites, positively and unmistakably Comanchian and not a particle earlier, the free fragments in the hollow space included a surprising proportion from organisms hitherto considered as peculiar to far older periods—even rudimentary fishes, mollusks, and corals as remote as the Silurian or Ordovician. The inevitable inference was that in this part of the world there had been a remarkable and unique degree of continuity between the life of over three hundred million years ago and that of only thirty million years ago. How far this continuity had extended

beyond the Oligocene Age when the cavern was closed was of course past all speculation. In any event, the coming of the frightful ice in the Pleistocene some five hundred thousand years ago—a mere yesterday as compared with the age of this cavity—must have put an end to any of the primal forms which had locally managed to outlive their common terms.

Lake was not content to let his first message stand, but had another bulletin written and dispatched across the snow to the camp before Moulton could get back. After that Moulton stayed at the wireless in one of the planes, transmitting to me—and to the Arkham for relaying to the outside world—the frequent postscripts which Lake sent him by a succession of messengers. Those who followed the newspapers will remember the excitement created among men of science by that afternoon's reports—reports which have finally led, after all these years, to the organization of that very Starkweather-Moore Expedition which I am so anxious to dissuade from its purposes. I had better give the messages literally as Lake sent them, and as our base operator McTighe translated them from the pencil shorthand:

Fowler makes discovery of highest importance in sandstone and limestone fragments from blasts. Several distinct triangular striated prints like those in Archaean slate, proving that source

survived from over six hundred million years ago to Comanchian times without more than moderate morphological changes and decrease in average size. Comanchian prints apparently more primitive or decadent, if anything, than older ones. Emphasize importance of discovery in press. Will mean to biology what Einstein has meant to mathematics and physics. Joins up with my previous work and amplifies conclusions. Appears to indicate, as I suspected, that earth has seen whole cycle or cycles of organic life before known one that begins with Archaeozoic cells. Was evolved and specialized not later than a thousand million years ago, when planet was young and recently uninhabitable for any life forms or normal protoplasmic structure. Question arises when, where, and how development took place.

Later. Examining certain skeletal fragments of large land and marine saurians and primitive mammals, find singular local wounds or injuries to bony structure not attributable to any known predatory or carnivorous animal of any period, of two sorts—straight, penetrant bores, and apparently hacking incisions. One or two cases of cleanly severed bones. Not many specimens affected. Am sending to camp for electric torches. Will extend search area underground by hacking away stalactites.

Still later. Have found peculiar soapstone fragment about six inches across and an inch and a half thick, wholly unlike any visible local

formation—greenish, but no evidences to place its period. Has curious smoothness and regularity. Shaped like five-pointed star with tips broken off, and signs of other cleavage at inward angles and in center of surface. Small, smooth depression in center of unbroken surface. Arouses much curiosity as to source and weathering. Probably some freak of water action. Carroll, with magnifier, thinks he can make out additional markings of geologic significance. Groups of tiny dots in regular patterns. Dogs growing uneasy as we work, and seem to hate this soapstone. Must see if it has any peculiar odor. Will report again when Mills gets back with light and we start on underground area.

10:15 p.m. Important discovery. Orrendorf and Watkins, working underground at 9:45 with light, found monstrous barrel-shaped fossil of wholly unknown nature; probably vegetable unless overgrown specimen of unknown marine radiata. Tissue evidently preserved by mineral salts. Tough as leather, but astonishing flexibility retained in places. Marks of broken-off parts at ends and around sides. Six feet end to end, three and five-tenths feet central diameter, tapering to one foot at each end. Like a barrel with five bulging ridges in place of staves. Lateral breakages, as of thinnish stalks, are at equator in middle of these ridges. In furrows between ridges are curious growths—combs or wings that fold up and spread out like fans. All greatly damaged but one, which gives almost seven-foot wing spread. Arrangement

reminds one of certain monsters of primal myth, especially fabled Elder Things in *Necronomicon*. These wings seem to be membranous, stretched on frame work of glandular tubing. Apparent minute orifices in frame tubing at wing tips. Ends of body shriveled, giving no clue to interior or to what has been broken off there. Must dissect when we get back to camp. Can't decide whether vegetable or animal. Many features obviously of almost incredible primitiveness. Have set all hands cutting stalactites and looking for further specimens. Additional scarred bones found, but these must wait. Having trouble with dogs. They can't endure the new specimen, and would probably tear it to pieces if we didn't keep it at a distance from them.

11:30 p.m. Attention, Dyer, Pabodie, Douglas. Matter of highest—I might say transcendent—importance. Arkham must relay to Kingsport Head Station at once. Strange barrel growth is the Archaean thing that left prints in rocks. Mills, Boudreau, and Fowler discover cluster of thirteen more at underground point forty feet from aperture. Mixed with curiously rounded and configured soapstone fragments smaller than one previously found—star-shaped, but no marks of breakage except at some of the points. Of organic specimens, eight apparently perfect, with all appendages. Have brought all to surface, leading off dogs to distance. They cannot stand the things. Give close attention to description and repeat back for accuracy. Papers must get this right.

Objects are eight feet long all over. Six-foot, five-ridged barrel torso three and five-tenths feet central diameter, one foot end diameters. Dark gray, flexible, and infinitely tough. Seven-foot membranous wings of same color, found folded, spread out of furrows between ridges. Wing framework tubular or glandular, of lighter gray, with orifices at wing tips. Spread wings have serrated edge. Around equator, one at central apex of each of the five vertical, stave-like ridges are five systems of light gray flexible arms or tentacles found tightly folded to torso but expansible to maximum length of over three feet. Like arms of primitive crinoid. Single stalks three inches diameter branch after six inches into five substalks, each of which branches after eight inches into small, tapering tentacles or tendrils, giving each stalk a total of twenty-five tentacles.

At top of torso blunt, bulbous neck of lighter gray, with gill-like suggestions, holds yellowish five-pointed starfish-shaped apparent head covered with three-inch wiry cilia of various prismatic colors. Head thick and puffy, about two feet point to point, with three-inch flexible yellowish tubes projecting from each point. Slit in exact center of top probably breathing aperture. At end of each tube is spherical expansion where yellowish membrane rolls back on handling to reveal glassy, red-irised globe, evidently an eye. Five slightly longer reddish tubes start from inner angles of starfish-shaped head and end in sacklike swellings of same color which, upon pressure, open to

bell-shaped orifices two inches maximum diameter and lined with sharp, white tooth like projections—probably mouths. All these tubes, cilia, and points of starfish head, found folded tightly down; tubes and points clinging to bulbous neck and torso. Flexibility surprising despite vast toughness.

At bottom of torso, rough but dissimilarly functioning counterparts of head arrangements exist. Bulbous light-gray pseudo-neck, without gill suggestions, holds greenish five-pointed starfish arrangement. Tough, muscular arms four feet long and tapering from seven inches diameter at base to about two and five-tenths at point. To each point is attached small end of a greenish five-veined membranous triangle eight inches long and six wide at farther end. This is the paddle, fin, or pseudofoot which has made prints in rocks from a thousand million to fifty or sixty million years old. From inner angles of starfish-arrangement project two-foot reddish tubes tapering from three inches diameter at base to one at tip. Orifices at tips. All these parts infinitely tough and leathery, but extremely flexible. Four-foot arms with paddles undoubtedly used for locomotion of some sort, marine or otherwise. When moved, display suggestions of exaggerated muscularity. As found, all these projections tightly folded over pseudoneck and end of torso, corresponding to projections at other end.

Cannot yet assign positively to animal or vegetable kingdom, but odds now favor animal. Probably represents incredibly advanced evolution of

radiata without loss of certain primitive features. Echinoderm resemblances unmistakable despite local contradictory evidences. Wing structure puzzles in view of probable marine habitat, but may have use in water navigation. Symmetry is curiously vegetablelike, suggesting vegetable's essential up-and-down structure rather than animal's fore-and-aft structure. Fabulously early date of evolution, preceding even simplest Archaean protozoa hitherto known, baffles all conjecture as to origin.

Complete specimens have such uncanny resemblance to certain creatures of primal myth that suggestion of ancient existence outside antarctic becomes inevitable. Dyer and Pabodie have read Necronomicon and seen Clark Ashton Smith's nightmare paintings based on text, and will understand when I speak of Elder Things supposed to have created all earth life as jest or mistake. Students have always thought conception formed from morbid imaginative treatment of very ancient tropical radiata. Also like prehistoric folklore things Wilmarth has spoken of—Cthulhu cult appendages, etc.

Vast field of study opened. Deposits probably of late Cretaceous or early Eocene period, judging from associated specimens. Massive stalagmites deposited above them. Hard work hewing out, but toughness prevented damage. State of preservation miraculous, evidently owing to limestone action. No more found so far, but will resume search later. Job now to get fourteen huge specimens to camp without dogs,

which bark furiously and can't be trusted near them. With nine men—three left to guard the dogs—we ought to manage the three sledges fairly well, though wind is bad. Must establish plane communication with McMurdo Sound and begin shipping material. But I've got to dissect one of these things before we take any rest. Wish I had a real laboratory here. Dyer better kick himself for having tried to stop my westward trip. First the world's greatest mountains, and then this. If this last isn't the high spot of the expedition, I don't know what is. We're made scientifically. Congrats, Pabodie, on the drill that opened up the cave. Now will Arkham please repeat description?

The sensations of Pabodie and myself at receipt of this report were almost beyond description, nor were our companions much behind us in enthusiasm. McTighe, who had hastily translated a few high spots as they came from the droning receiving set, wrote out the entire message from his shorthand version as soon as Lake's operator signed off. All appreciated the epoch-making significance of the discovery, and I sent Lake congratulations as soon as the Arkham's operator had repeated back the descriptive parts as requested; and my example was followed by Sherman from his station at the McMurdo Sound supply cache, as well as by Captain Douglas of the Arkham. Later, as head of the expedition, I added some remarks to be relayed through the

Arkham to the outside world. Of course, rest was an absurd thought amidst this excitement; and my only wish was to get to Lake's camp as quickly as I could. It disappointed me when he sent word that a rising mountain gale made early aerial travel impossible.

But within an hour and a half interest again rose to banish disappointment. Lake, sending more messages, told of the completely successful transportation of the fourteen great specimens to the camp. It had been a hard pull, for the things were surprisingly heavy; but nine men had accomplished it very neatly. Now some of the party were hurriedly building a snow corral at a safe distance from the camp, to which the dogs could be brought for greater convenience in feeding. The specimens were laid out on the hard snow near the camp, save for one on which Lake was making crude attempts at dissection.

This dissection seemed to be a greater task than had been expected, for, despite the heat of a gasoline stove in the newly raised laboratory tent, the deceptively flexible tissues of the chosen specimen—a powerful and intact one—lost nothing of their more than leathery toughness. Lake was puzzled as to how he might make the requisite incisions without violence destructive enough to upset all the structural niceties he was looking for. He had, it is true, seven more perfect specimens; but these were too few to use up recklessly

unless the cave might later yield an unlimited supply. Accordingly he removed the specimen and dragged in one which, though having remnants of the starfish arrangements at both ends, was badly crushed and partly disrupted along one of the great torso furrows.

Results, quickly reported over the wireless, were baffling and provocative indeed. Nothing like delicacy or accuracy was possible with instruments hardly able to cut the anomalous tissue, but the little that was achieved left us all awed and bewildered. Existing biology would have to be wholly revised, for this thing was no product of any cell growth science knows about. There had been scarcely any mineral replacement, and despite an age of perhaps forty million years, the internal organs were wholly intact. The leathery, undeteriorative, and almost indestructible quality was an inherent attribute of the thing's form of organization, and pertained to some paleocean cycle of invertebrate evolution utterly beyond our powers of speculation. At first all that Lake found was dry, but as the heated tent produced its thawing effect, organic moisture of pungent and offensive odor was encountered toward the thing's uninjured side. It was not blood, but a thick, dark-green fluid apparently answering the same purpose. By the time Lake reached this stage, all thirty-seven dogs had been brought to the still uncompleted corral near the camp, and even

at that distance set up a savage barking and show of restlessness at the acrid, diffusive smell.

Far from helping to place the strange entity, this provisional dissection merely deepened its mystery. All guesses about its external members had been correct, and on the evidence of these one could hardly hesitate to call the thing animal; but internal inspection brought up so many vegetable evidences that Lake was left hopelessly at sea. It had digestion and circulation, and eliminated waste matter through the reddish tubes of its starfish-shaped base. Cursorily, one would say that its respiration apparatus handled oxygen rather than carbon dioxide, and there were odd evidences of air-storage chambers and methods of shifting respiration from the external orifice to at least two other fully developed breathing systems—gills and pores. Clearly, it was amphibian, and probably adapted to long airless hibernation periods as well. Vocal organs seemed present in connection with the main respiratory system, but they presented anomalies beyond immediate solution. Articulate speech, in the sense of syllable utterance, seemed barely conceivable, but musical piping notes covering a wide range were highly probable. The muscular system was almost prematurely developed.

The nervous system was so complex and highly developed as to leave Lake aghast. Though

excessively primitive and archaic in some respects, the thing had a set of ganglial centers and connectives arguing the very extremes of specialized development. Its five-lobed brain was surprisingly advanced, and there were signs of a sensory equipment, served in part through the wiry cilia of the head, involving factors alien to any other terrestrial organism. Probably it had more than five senses, so that its habits could not be predicted from any existing analogy. It must, Lake thought, have been a creature of keen sensitiveness and delicately differentiated functions in its primal world—much like the ants and bees of today. It reproduced like the vegetable cryptogams, especially the Pteridophyta, having spore cases at the tips of the wings and evidently developing from a thallus or prothallus.

But to give it a name at this stage was mere folly. It looked like a radiate, but was clearly something more. It was partly vegetable, but had three-fourths of the essentials of animal structure. That it was marine in origin, its symmetrical contour and certain other attributes clearly indicated; yet one could not be exact as to the limit of its later adaptations. The wings, after all, held a persistent suggestion of the aerial. How it could have undergone its tremendously complex evolution on a new-born earth in time to leave prints in Archaean rocks was so far beyond conception as to make Lake whimsically recall the primal myths

about Great Old Ones who filtered down from the stars and concocted earth life as a joke or mistake; and the wild tales of cosmic hill things from outside told by a folklorist colleague in Miskatonic's English department.

Naturally, he considered the possibility of the pre-Cambrian prints having been made by a less evolved ancestor of the present specimens, but quickly rejected this too-facile theory upon considering the advanced structural qualities of the older fossils. If anything, the later contours showed decadence rather than higher evolution. The size of the pseudofeet had decreased, and the whole morphology seemed coarsened and simplified. Moreover, the nerves and organs just examined held singular suggestions of retrogression from forms still more complex. Atrophied and vestigial parts were surprisingly prevalent. Altogether, little could be said to have been solved; and Lake fell back on mythology for a provisional name—jocosely dubbing his finds "The Elder Ones."

At about 2:30 a.m., having decided to postpone further work and get a little rest, he covered the dissected organism with a tarpaulin, emerged from the laboratory tent, and studied the intact specimens with renewed interest. The ceaseless antarctic sun had begun to limber up their tissues a trifle, so that the head points and tubes of two or three showed signs of unfolding; but Lake

did not believe there was any danger of immediate decomposition in the almost subzero air. He did, however, move all the undissected specimens close together and throw a spare tent over them in order to keep off the direct solar rays. That would also help to keep their possible scent away from the dogs, whose hostile unrest was really becoming a problem, even at their substantial distance and behind the higher and higher snow walls which an increased quota of the men were hastening to raise around their quarters. He had to weight down the corners of the tent cloth with heavy blocks of snow to hold it in place amidst the rising gale, for the titan mountains seemed about to deliver some gravely severe blasts. Early apprehensions about sudden antarctic winds were revived, and under Atwood's supervision precautions were taken to bank the tents, new dog corral, and crude aeroplane shelters with snow on the mountainward side. These latter shelters, begun with hard snow blocks during odd moments, were by no means as high as they should have been; and Lake finally detached all hands from other tasks to work on them.

It was after four when Lake at last prepared to sign off and advised us all to share the rest period his outfit would take when the shelter walls were a little higher. He held some friendly chat with Pabodie over the ether, and repeated his praise of the really marvelous drills that had

helped him make his discovery. Atwood also sent greetings and praises. I gave Lake a warm word of congratulations, owning up that he was right about the western trip, and we all agreed to get in touch by wireless at ten in the morning. If the gale was then over, Lake would send a plane for the party at my base. Just before retiring I dispatched a final message to the Arkham with instructions about toning down the day's news for the outside world, since the full details seemed radical enough to rouse a wave of incredulity until further substantiated.

III.

None of us, I imagine, slept very heavily or continuously that morning. Both the excitement of Lake's discovery and the mounting fury of the wind were against such a thing. So savage was the blast, even where we were, that we could not help wondering how much worse it was at Lake's camp, directly under the vast unknown peaks that bred and delivered it. McTighe was awake at ten o'clock and tried to get Lake on the wireless, as agreed, but some electrical condition in the disturbed air to the westward seemed to prevent communication. We did, however, get the Arkham, and Douglas told me that he had likewise been vainly trying to reach Lake. He had not known about the wind, for very little was blowing at

McMurdo Sound, despite its persistent rage where we were.

Throughout the day we all listened anxiously and tried to get Lake at intervals, but invariably without results. About noon a positive frenzy of wind stampeded out of the west, causing us to fear for the safety of our camp; but it eventually died down, with only a moderate relapse at 2 p.m. After three o'clock it was very quiet, and we redoubled our efforts to get Lake. Reflecting that he had four planes, each provided with an excellent short-wave outfit, we could not imagine any ordinary accident capable of crippling all his wireless equipment at once. Nevertheless the stony silence continued, and when we thought of the delirious force the wind must have had in his locality we could not help making the most direful conjectures.

By six o'clock our fears had become intense and definite, and after a wireless consultation with Douglas and Thorfinnssen I resolved to take steps toward investigation. The fifth aeroplane, which we had left at the McMurdo Sound supply cache with Sherman and two sailors, was in good shape and ready for instant use, and it seemed that the very emergency for which it had been saved was now upon us. I got Sherman by wireless and ordered him to join me with the plane and the two sailors at the southern base as quickly as possible, the air conditions being apparently highly

favorable. We then talked over the personnel of the coming investigation party, and decided that we would include all hands, together with the sledge and dogs which I had kept with me. Even so great a load would not be too much for one of the huge planes built to our special orders for heavy machinery transportation. At intervals I still tried to reach Lake with the wireless, but all to no purpose.

Sherman, with the sailors Gunnarsson and Larsen, took off at 7:30, and reported a quiet flight from several points on the wing. They arrived at our base at midnight, and all hands at once discussed the next move. It was risky business sailing over the antarctic in a single aeroplane without any line of bases, but no one drew back from what seemed like the plainest necessity. We turned in at two o'clock for a brief rest after some preliminary loading of the plane, but were up again in four hours to finish the loading and packing.

At 7:15 a.m., January 25th, we started flying northwestward under McTighe's pilotage with ten men, seven dogs, a sledge, a fuel and food supply, and other items including the plane's wireless outfit. The atmosphere was clear, fairly quiet, and relatively mild in temperature, and we anticipated very little trouble in reaching the latitude and longitude designated by Lake as the site of his camp. Our apprehensions were over what we might find, or fail to find,

at the end of our journey, for silence continued to answer all calls dispatched to the camp.

Every incident of that four-and-a-half-hour flight is burned into my recollection because of its crucial position in my life. It marked my loss, at the age of fifty-four, of all that peace and balance which the normal mind possesses through its accustomed conception of external nature and nature's laws. Thenceforward the ten of us—but the student Danforth and myself above all others—were to face a hideously amplified world of lurking horrors which nothing can erase from our emotions, and which we would refrain from sharing with mankind in general if we could. The newspapers have printed the bulletins we sent from the moving plane, telling of our non-stop course, our two battles with treacherous upper-air gales, our glimpse of the broken surface where Lake had sunk his mid-journey shaft three days before, and our sight of a group of those strange fluffy snow cylinders noted by Amundsen and Byrd as rolling in the wind across the endless leagues of frozen plateau. There came a point, though, when our sensations could not be conveyed in any words the press would understand, and a latter point when we had to adopt an actual rule of strict censorship.

The sailor Larsen was first to spy the jagged line of witch-like cones and pinnacles ahead, and his

shouts sent everyone to the windows of the great cabined plane. Despite our speed, they were very slow in gaining prominence; hence we knew that they must be infinitely far off, and visible only because of their abnormal height. Little by little, however, they rose grimly into the western sky; allowing us to distinguish various bare, bleak, blackish summits, and to catch the curious sense of fantasy which they inspired as seen in the reddish antarctic light against the provocative background of iridescent ice-dust clouds. In the whole spectacle there was a persistent, pervasive hint of stupendous secrecy and potential revelation. It was as if these stark, nightmare spires marked the pylons of a frightful gateway into forbidden spheres of dream, and complex gulfs of remote time, space, and ultra-dimensionality. I could not help feeling that they were evil things—mountains of madness whose farther slopes looked out over some accursed ultimate abyss. That seething, half-luminous cloud background held ineffable suggestions of a vague, ethereal beyondness far more than terrestrially spatial, and gave appalling reminders of the utter remoteness, separateness, desolation, and aeon-long death of this untrodden and unfathomed austral world.

It was young Danforth who drew our notice to the curious regularities of the higher mountain skyline—regularities like clinging

fragments of perfect cubes, which Lake had mentioned in his messages, and which indeed justified his comparison with the dreamlike suggestions of primordial temple ruins, on cloudy Asian mountaintops so subtly and strangely painted by Roerich. There was indeed something hauntingly Roerich-like about this whole unearthly continent of mountainous mystery. I had felt it in October when we first caught sight of Victoria Land, and I felt it afresh now. I felt, too, another wave of uneasy consciousness of Archaean mythical resemblances; of how disturbingly this lethal realm corresponded to the evilly famed plateau of Leng in the primal writings. Mythologists have placed Leng in Central Asia; but the racial memory of man—or of his predecessors—is long, and it may well be that certain tales have come down from lands and mountains and temples of horror earlier than Asia and earlier than any human world we know. A few daring mystics have hinted at a pre-Pleistocene origin for the fragmentary Pnakotic Manuscripts, and have suggested that the devotees of Tsathoggua were as alien to mankind as Tsathoggua itself. Leng, wherever in space or time it might brood, was not a region I would care to be in or near, nor did I relish the proximity of a world that had ever bred such ambiguous and Archaean monstrosities as those Lake had just mentioned. At the moment I felt sorry that I had ever read the

abhorred Necronomicon, or talked so much with that unpleasantly erudite folklorist Wilmarth at the university.

This mood undoubtedly served to aggravate my reaction to the bizarre mirage which burst upon us from the increasingly opalescent zenith as we drew near the mountains and began to make out the cumulative undulations of the foothills. I had seen dozens of polar mirages during the preceding weeks, some of them quite as uncanny and fantastically vivid as the present sample; but this one had a wholly novel and obscure quality of menacing symbolism, and I shuddered as the seething labyrinth of fabulous walls and towers and minarets loomed out of the troubled ice vapors above our heads.

The effect was that of a Cyclopean city of no architecture known to man or to human imagination, with vast aggregations of night-black masonry embodying monstrous perversions of geometrical laws. There were truncated cones, sometimes terraced or fluted, surmounted by tall cylindrical shafts here and there bulbously enlarged and often capped with tiers of thinish scalloped disks; and strange beetling, table-like constructions suggesting piles of multitudinous rectangular slabs or circular plates or five-pointed stars with each one overlapping the one beneath. There were composite cones and pyramids either alone or surmounting

cylinders or cubes or flatter truncated cones and pyramids, and occasional needle-like spires in curious clusters of five. All of these febrile structures seemed knit together by tubular bridges crossing from one to the other at various dizzy heights, and the implied scale of the whole was terrifying and oppressive in its sheer gigantism. The general type of mirage was not unlike some of the wilder forms observed and drawn by the arctic whaler Scoresby in 1820, but at this time and place, with those dark, unknown mountain peaks soaring stupendously ahead, that anomalous elder-world discovery in our minds, and the pall of probable disaster enveloping the greater part of our expedition, we all seemed to find in it a taint of latent malignity and infinitely evil portent.

I was glad when the mirage began to break up, though in the process the various nightmare turrets and cones assumed distorted, temporary forms of even vaster hideousness. As the whole illusion dissolved to churning opalescence we began to look earthward again, and saw that our journey's end was not far off. The unknown mountains ahead rose dizzily up like a fearsome rampart of giants, their curious regularities showing with startling clearness even without a field-glass. We were over the lowest foothills now, and could see amidst the snow, ice, and bare patches of their main plateau a couple of darkish spots which we took to be Lake's camp

and boring. The higher foothills shot up between five and six miles away, forming a range almost distinct from the terrifying line of more than Himalayan peaks beyond them. At length Ropes—the student who had relieved McTighe at the controls—began to head downward toward the left-hand dark spot whose size marked it as the camp. As he did so, McTighe sent out the last uncensored wireless message the world was to receive from our expedition.

Everyone, of course, has read the brief and unsatisfying bulletins of the rest of our antarctic sojourn. Some hours after our landing we sent a guarded report of the tragedy we found, and reluctantly announced the wiping out of the whole Lake party by the frightful wind of the preceding day, or of the night before that. Eleven known dead, young Gedney missing. People pardoned our hazy lack of details through realization of the shock the sad event must have caused us, and believed us when we explained that the mangling action of the wind had rendered all eleven bodies unsuitable for transportation outside. Indeed, I flatter myself that even in the midst of our distress, utter bewilderment, and soul-clutching horror, we scarcely went beyond the truth in any specific instance. The tremendous significance lies in what we dared not tell; what I would not tell now but for the need of warning others off from nameless terrors.

It is a fact that the wind had

brought dreadful havoc. Whether all could have lived through it, even without the other thing, is gravely open to doubt. The storm, with its fury of madly driven ice particles, must have been beyond anything our expedition had encountered before. One aeroplane shelter—all, it seems, had been left in a far too flimsy and inadequate state—was nearly pulverized; and the derrick at the distant boring was entirely shaken to pieces. The exposed metal of the grounded planes and drilling machinery was bruised into a high polish, and two of the small tents were flattened despite their snow banking. Wooden surfaces left out in the blast were pitted and denuded of paint, and all signs of tracks in the snow were completely obliterated. It is also true that we found none of the Archaean biological objects in a condition to take outside as a whole. We did gather some minerals from a vast, tumbled pile, including several of the greenish soapstone fragments whose odd five-pointed rounding and faint patterns of grouped dots caused so many doubtful comparisons; and some fossil bones, among which were the most typical of the curiously injured specimens.

None of the dogs survived, their hurriedly built snow inclosure near the camp being almost wholly destroyed. The wind may have done that, though the greater breakage on the side next the camp, which was not the windward one, suggests an outward leap or break of the frantic

beasts themselves. All three sledges were gone, and we have tried to explain that the wind may have blown them off into the unknown. The drill and ice-melting machinery at the boring were too badly damaged to warrant salvage, so we used them to choke up that subtly disturbing gateway to the past which Lake had blasted. We likewise left at the camp the two most shaken up of the planes; since our surviving party had only four real pilots—Sherman, Danforth, McTighe, and Ropes—in all, with Danforth in a poor nervous shape to navigate. We brought back all the books, scientific equipment, and other incidentals we could find, though much was rather unaccountably blown away. Spare tents and furs were either missing or badly out of condition.

It was approximately 4 p.m., after wide plane cruising had forced us to give Gedney up for lost, that we sent our guarded message to the Arkham for relaying; and I think we did well to keep it as calm and noncommittal as we succeeded in doing. The most we said about agitation concerned our dogs, whose frantic uneasiness near the biological specimens was to be expected from poor Lake's accounts. We did not mention, I think, their display of the same uneasiness when sniffing around the queer greenish soapstones and certain other objects in the disordered region—objects including scientific instruments, aeroplanes, and machinery, both at

the camp and at the boring, whose parts had been loosened, moved, or otherwise tampered with by winds that must have harbored singular curiosity and investigativeness.

About the fourteen biological specimens, we were pardonably indefinite. We said that the only ones we discovered were damaged, but that enough was left of them to prove Lake's description wholly and impressively accurate. It was hard work keeping our personal emotions out of this matter—and we did not mention numbers or say exactly how we had found those which we did find. We had by that time agreed not to transmit anything suggesting madness on the part of Lake's men, and it surely looked like madness to find six imperfect monstrosities carefully buried upright in nine-foot snow graves under five-pointed mounds punched over with groups of dots in patterns exactly those on the queer greenish soapstones dug up from Mesozoic or Tertiary times. The eight perfect specimens mentioned by Lake seemed to have been completely blown away.

We were careful, too, about the public's general peace of mind; hence Danforth and I said little about that frightful trip over the mountains the next day. It was the fact that only a radically lightened plane could possibly cross a range of such height, which mercifully limited that scouting tour to the two of us. On our return at one a.m., Danforth was close to hysterics, but kept an

admirably stiff upper lip. It took no persuasion to make him promise not to show our sketches and the other things we brought away in our pockets, not to say anything more to the others than what we had agreed to relay outside, and to hide our camera films for private development later on; so that part of my present story will be as new to Pabodie, McTighe, Ropes, Sherman, and the rest as it will be to the world in general. Indeed, Danforth is closer mouthed than I: for he saw, or thinks he saw, one thing he will not tell even me.

As all know, our report included a tale of a hard ascent—a confirmation of Lake's opinion that the great peaks are of Archaean slate and other very primal crumpled strata unchanged since at least middle Comanchian times; a conventional comment on the regularity of the clinging cube and rampart formations; a decision that the cave mouths indicate dissolved calcareous veins; a conjecture that certain slopes and passes would permit of the scaling and crossing of the entire range by seasoned mountaineers; and a remark that the mysterious other side holds a lofty and immense superplateau as ancient and unchanging as the mountains themselves—twenty thousand feet in elevation, with grotesque rock formations protruding through a thin glacial layer and with low gradual foothills between the general plateau surface and the sheer precipices of the highest peaks.

This body of data is in every respect true so far as it goes, and it completely satisfied the men at the camp. We laid our absence of sixteen hours—a longer time than our announced flying, landing, reconnoitering, and rock-collecting program called for—to a long mythical spell of adverse wind conditions, and told truly of our landing on the farther foothills. Fortunately our tale sounded realistic and prosaic enough not to tempt any of the others into emulating our flight. Had any tried to do that, I would have used every ounce of my persuasion to stop them—and I do not know what Danforth would have done. While we were gone, Pabodie, Sherman, Ropes, McTighe, and Williamson had worked like beavers over Lake's two best planes, fitting them again for use despite the altogether unaccountable juggling of their operative mechanism.

We decided to load all the planes the next morning and start back for our old base as soon as possible. Even though indirect, that was the safest way to work toward McMurdo Sound; for a straight-line flight across the most utterly unknown stretches of the aeon-dead continent would involve many additional hazards. Further exploration was hardly feasible in view of our tragic decimation and the ruin of our drilling machinery. The doubts and horrors around us—which we did not reveal—made us wish only to escape from this austral world of

desolation and brooding madness as swiftly as we could.

As the public knows, our return to the world was accomplished without further disasters. All planes reached the old base on the evening of the next day—January 27th—after a swift non-stop flight; and on the 28th we made McMurdo Sound in two laps, the one pause being very brief, and occasioned by a faulty rudder in the furious wind over the ice shelf after we had cleared the great plateau. In five days more, the Arkham and Miskatonic, with all hands and equipment on board, were shaking clear of the thickening field ice and working up Ross Sea with the mocking mountains of Victoria Land looming westward against a troubled antarctic sky and twisting the wind's wails into a wide-ranged musical piping which chilled my soul to the quick. Less than a fortnight later we left the last hint of polar land behind us and thanked heaven that we were clear of a haunted, accursed realm where life and death, space and time, have made black and blasphemous alliances, in the unknown epochs since matter first writhed and swam on the planet's scarce-cooled crust.

Since our return we have all constantly worked to discourage antarctic exploration, and have kept certain doubts and guesses to ourselves with splendid unity and faithfulness. Even young Danforth, with his nervous breakdown, has not flinched or babbled to his

doctors—indeed, as I have said, there is one thing he thinks he alone saw which he will not tell even me, though I think it would help his psychological state if he would consent to do so. It might explain and relieve much, though perhaps the thing was no more than the delusive aftermath of an earlier shock. That is the impression I gather after those rare, irresponsible moments when he whispers disjointed things to me—things which he repudiates vehemently as soon as he gets a grip on himself again.

It will be hard work deterring others from the great white south, and some of our efforts may directly harm our cause by drawing inquiring notice. We might have known from the first that human curiosity is undying, and that the results we announced would be enough to spur others ahead on the same age-long pursuit of the unknown. Lake's reports of those biological monstrosities had aroused naturalists and paleontologists to the highest pitch, though we were sensible enough not to show the detached parts we had taken from the actual buried specimens, or our photographs of those specimens as they were found. We also refrained from showing the more puzzling of the scarred bones and greenish soapstones; while Danforth and I have closely guarded the pictures we took or drew on the superplateau across the range, and the crumpled things we smoothed,

studied in terror, and brought away in our pockets.

But now that Starkweather-Moore party is organizing, and with a thoroughness far beyond anything our outfit attempted. If not dissuaded, they will get to the innermost nucleus of the antarctic and melt and bore till they bring up that which we know may end the world. So I must break through all reticences at last—even about that ultimate, nameless thing beyond the mountains of madness.

IV.

It is only with vast hesitancy and repugnance that I let my mind go back to Lake's camp and what we really found there—and to that other thing beyond the mountains of madness. I am constantly tempted to shirk the details, and to let hints stand for actual facts and ineluctable deductions. I hope I have said enough already to let me glide briefly over the rest; the rest, that is, of the horror at the camp. I have told of the wind-ravaged terrain, the damaged shelters, the disarranged machinery, the varied uneasiness of our dogs, the missing sledges and other items, the deaths of men and dogs, the absence of Gedney, and the six insanely buried biological specimens, strangely sound in texture for all their structural injuries, from a world forty million years dead. I do not recall whether

I mentioned that upon checking up the canine bodies we found one dog missing. We did not think much about that till later—indeed, only Danforth and I have thought of it at all.

The principal things I have been keeping back relate to the bodies, and to certain subtle points which may or may not lend a hideous and incredible kind of rationale to the apparent chaos. At the time, I tried to keep the men's minds off those points; for it was so much simpler—so much more normal—to lay everything to an outbreak of madness on the part of some of Lake's party. From the look of things, that demon mountain wind must have been enough to drive any man mad in the midst of this center of all earthly mystery and desolation.

The crowning abnormality, of course, was the condition of the bodies—men and dogs alike. They had all been in some terrible kind of conflict, and were torn and mangled in fiendish and altogether inexplicable ways. Death, so far as we could judge, had in each case come from strangulation or laceration. The dogs had evidently started the trouble, for the state of their ill-built corral bore witness to its forcible breakage from within. It had been set some distance from the camp because of the hatred of the animals for those hellish Archaean organisms, but the precaution seemed to have been taken in vain. When left alone in that monstrous wind, behind flimsy walls

of insufficient height, they must have stampeded—whether from the wind itself, or from some subtle, increasing odor emitted by the nightmare specimens, one could not say. Those specimens, of course, had been covered with a tent-cloth; yet the low antarctic sun had beat steadily upon that cloth, and Lake had mentioned that solar heat tended to make the strangely sound and tough tissues of the things relax and expand. Perhaps the wind had whipped the cloth from over them, and jostled them about in such a way that their more pungent olfactory qualities became manifest despite their unbelievable antiquity.

But whatever had happened, it was hideous and revolting enough. Perhaps I had better put squeamishness aside and tell the worst at last—though with a categorical statement of opinion, based on the first-hand observations and most rigid deductions of both Danforth and myself, that the then missing Gedney was in no way responsible for the loathsome horrors we found. I have said that the bodies were frightfully mangled. Now I must add that some were incised and subtracted from in the most curious, cold-blooded, and inhuman fashion. It was the same with dogs and men. All the healthier, fatter bodies, quadrupedal or bipedal, had had their most solid masses of tissue cut out and removed, as by a careful butcher; and around them was a strange sprinkling of salt—taken from the ravaged provision

chests on the planes—which conjured up the most horrible associations. The thing had occurred in one of the crude aeroplane shelters from which the plane had been dragged out, and subsequent winds had effaced all tracks which could have supplied any plausible theory. Scattered bits of clothing, roughly slashed from the human incision subjects, hinted no clues. It is useless to bring up the half impression of certain faint snow prints in one shielded corner of the ruined inclosure—because that impression did not concern human prints at all, but was clearly mixed up with all the talk of fossil prints which poor Lake had been giving throughout the preceding weeks. One had to be careful of one's imagination in the lee of those overshadowing mountains of madness.

As I have indicated, Gedney and one dog turned out to be missing in the end. When we came on that terrible shelter we had missed two dogs and two men; but the fairly unharmed dissecting tent, which we entered after investigating the monstrous graves, had something to reveal. It was not as Lake had left it, for the covered parts of the primal monstrosity had been removed from the improvised table. Indeed, we had already realized that one of the six imperfect and insanely buried things we had found—the one with the trace of a peculiarly hateful odor—must represent the collected sections of the entity which Lake had tried

to analyze. On and around that laboratory table were strewn other things, and it did not take long for us to guess that those things were the carefully though oddly and inexpertly dissected parts of one man and one dog. I shall spare the feelings of survivors by omitting mention of the man's identity. Lake's anatomical instruments were missing, but there were evidences of their careful cleansing. The gasoline stove was also gone, though around it we found a curious litter of matches. We buried the human parts beside the other ten men; and the canine parts with the other thirty-five dogs. Concerning the bizarre smudges on the laboratory table, and on the jumble of roughly handled illustrated books scattered near it, we were much too bewildered to speculate.

This formed the worst of the camp horror, but other things were equally perplexing. The disappearance of Gedney, the one dog, the eight uninjured biological specimens, the three sledges, and certain instruments, illustrated technical and scientific books, writing materials, electric torches and batteries, food and fuel, heating apparatus, spare tents, fur suits, and the like, was utterly beyond sane conjecture; as were likewise the spatter-fringed ink blots on certain pieces of paper, and the evidences of curious alien fumbling and experimentation around the planes and all other mechanical devices both at the camp and at the boring. The dogs seemed

to abhor this oddly disordered machinery. Then, too, there was the upsetting of the larder, the disappearance of certain staples, and the jarringly comical heap of tin cans pried open in the most unlikely ways and at the most unlikely places. The profusion of scattered matches, intact, broken, or spent, formed another minor enigma—as did the two or three tent cloths and fur suits which we found lying about with peculiar and unorthodox slashings conceivably due to clumsy efforts at unimaginable adaptations. The maltreatment of the human and canine bodies, and the crazy burial of the damaged Archaean specimens, were all of a piece with this apparent disintegrative madness. In view of just such an eventuality as the present one, we carefully photographed all the main evidences of insane disorder at the camp; and shall use the prints to buttress our pleas against the departure of the proposed Starkweather-Moore Expedition.

Our first act after finding the bodies in the shelter was to photograph and open the row of insane graves with the five-pointed snow mounds. We could not help noticing the resemblance of these monstrous mounds, with their clusters of grouped dots, to poor Lake's descriptions of the strange greenish soapstones; and when we came on some of the soapstones themselves in the great mineral pile, we found the likeness very close indeed. The whole general formation, it must be made

clear, seemed abominably suggestive of the starfish head of the Archaean entities; and we agreed that the suggestion must have worked potently upon the sensitized minds of Lake's overwrought party. Our own first sight of the actual buried entities formed a horrible moment, and sent the imaginations of Pabodie and myself back to some of the shocking primal myths we had read and heard. We all agreed that the mere sight and continued presence of the things must have coöperated with the oppressive polar solitude and daemon mountain wind in driving Lake's party mad.

For madness—centering in Gedney as the only possible surviving agent—was the explanation spontaneously adopted by everybody so far as spoken utterance was concerned; though I will not be so naive as to deny that each of us may have harbored wild guesses which sanity forbade him to formulate completely. Sherman, Pabodie, and McTighe made an exhaustive aeroplane cruise over all the surrounding territory in the afternoon, sweeping the horizon with field glasses in quest of Gedney and of the various missing things; but nothing came to light. The party reported that the titan barrier range extended endlessly to right and left alike, without any diminution in height or essential structure. On some of the peaks, though, the regular cube and rampart formations were bolder and plainer, having doubly fantastic similitudes

to Roerich-painted Asian hill ruins. The distribution of cryptical cave mouths on the black snow-denuded summits seemed roughly even as far as the range could be traced.

In spite of all the prevailing horrors, we were left with enough sheer scientific zeal and adventurousness to wonder about the unknown realm beyond those mysterious mountains. As our guarded messages stated, we rested at midnight after our day of terror and bafflement—but not without a tentative plan for one or more range-crossing altitude flights in a lightened plane with aerial camera and geologist's outfit, beginning the following morning. It was decided that Danforth and I try it first, and we awaked at 7 a.m. intending an early flight; however, heavy winds—mentioned in our brief, bulletin to the outside world—delayed our start till nearly nine o'clock.

I have already repeated the noncommittal story we told the men at camp—and relayed outside—after our return sixteen hours later. It is now my terrible duty to amplify this account by filling in the merciful blanks with hints of what we really saw in the hidden transmontane world—hints of the revelations which have finally driven Danforth to a nervous collapse. I wish he would add a really frank word about the thing which he thinks he alone saw—even though it was probably a nervous delusion—and which was perhaps the last straw that put him

where he is; but he is firm against that. All I can do is to repeat his later disjointed whispers about what set him shrieking as the plane soared back through the wind-tortured mountain pass after that real and tangible shock which I shared. This will form my last word. If the plain signs of surviving elder horrors in what I disclose be not enough to keep others from meddling with the inner antarctic—or at least from prying too deeply beneath the surface of that ultimate waste of forbidden secrets and inhuman, aeon-cursed desolation—the responsibility for unnamable and perhaps immeasurable evils will not be mine.

Danforth and I, studying the notes made by Pabodie in his afternoon flight and checking up with a sextant, had calculated that the lowest available pass in the range lay somewhat to the right of us, within sight of camp, and about twenty-three thousand or twenty-four thousand feet above sea level. For this point, then, we first headed in the lightened plane as we embarked on our flight of discovery. The camp itself, on foothills which sprang from a high continental plateau, was some twelve thousand feet in altitude; hence the actual height increase necessary was not so vast as it might seem. Nevertheless we were acutely conscious of the rarefied air and intense cold as we rose; for, on account of visibility conditions, we had to leave the cabin windows open.

We were dressed, of course, in our heaviest furs.

As we drew near the forbidding peaks, dark and sinister above the line of crevasse-riven snow and interstitial glaciers, we noticed more and more the curiously regular formations clinging to the slopes; and thought again of the strange Asian paintings of Nicholas Roerich. The ancient and wind-weathered rock strata fully verified all of Lake's bulletins, and proved that these pinnacles had been towering up in exactly the same way since a surprisingly early time in earth's history—perhaps over fifty million years. How much higher they had once been, it was futile to guess; but everything about this strange region pointed to obscure atmospheric influences unfavorable to change, and calculated to retard the usual climatic processes of rock disintegration.

But it was the mountainside tangle of regular cubes, ramparts, and cave mouths which fascinated and disturbed us most. I studied them with a field glass and took aerial photographs while Danforth drove; and at times I relieved him at the controls—though my aviation knowledge was purely an amateur's—in order to let him use the binoculars. We could easily see that much of the material of the things was a lightish Archaean quartzite, unlike any formation visible over broad areas of the general surface; and that their regularity was extreme and uncanny to an extent which poor

Lake had scarcely hinted.

As he had said, their edges were crumbled and rounded from untold aeons of savage weathering; but their preternatural solidity and tough material had saved them from obliteration. Many parts, especially those closest to the slopes, seemed identical in substance with the surrounding rock surface. The whole arrangement looked like the ruins of Macchu Picchu in the Andes, or the primal foundation walls of Kish as dug up by the Oxford Field Museum Expedition in 1929; and both Danforth and I obtained that occasional impression of separate Cyclopean blocks which Lake had attributed to his flight-companion Carroll. How to account for such things in this place was frankly beyond me, and I felt queerly humbled as a geologist. Igneous formations often have strange regularities—like the famous Giants' Causeway in Ireland—but this stupendous range, despite Lake's original suspicion of smoking cones, was above all else non-volcanic in evident structure.

The curious cave mouths, near which the odd formations seemed most abundant, presented another albeit a lesser puzzle because of their regularity of outline. They were, as Lake's bulletin had said, often approximately square or semicircular; as if the natural orifices had been shaped to greater symmetry by some magic hand. Their numerousness and wide distribution were

remarkable, and suggested that the whole region was honeycombed with tunnels dissolved out of limestone strata. Such glimpses as we secured did not extend far within the caverns, but we saw that they were apparently clear of stalactites and stalagmites. Outside, those parts of the mountain slopes adjoining the apertures seemed invariably smooth and regular; and Danforth thought that the slight cracks and pittings of the weathering tended toward unusual patterns. Filled as he was with the horrors and strangenesses discovered at the camp, he hinted that the pittings vaguely resembled those baffling groups of dots sprinkled over the primeval greenish soap-stones, so hideously duplicated on the madly conceived snow mounds above those six buried monstrosities.

We had risen gradually in flying over the higher foothills and along toward the relatively low pass we had selected. As we advanced we occasionally looked down at the snow and ice of the land route, wondering whether we could have attempted the trip with the simpler equipment of earlier days. Somewhat to our surprise we saw that the terrain was far from difficult as such things go; and that despite the crevasses and other bad spots it would not have been likely to deter the sledges of a Scott, a Shackleton, or an Amundsen. Some of the glaciers appeared to lead up to wind-bared passes with unusual continuity, and upon

reaching our chosen pass we found that its case formed no exception.

Our sensations of tense expectancy as we prepared to round the crest and peer out over an untrodden world can hardly be described on paper; even though we had no cause to think the regions beyond the range essentially different from those already seen and traversed. The touch of evil mystery in these barrier mountains, and in the beckoning sea of opalescent sky glimpsed betwixt their summits, was a highly subtle and attenuated matter not to be explained in literal words. Rather was it an affair of vague psychological symbolism and aesthetic association—a thing mixed up with exotic poetry and paintings, and with archaic myths lurking in shunned and forbidden volumes. Even the wind's burden held a peculiar strain of conscious malignity; and for a second it seemed that the composite sound included a bizarre musical whistling or piping over a wide range as the blast swept in and out of the omnipresent and resonant cave mouths. There was a cloudy note of reminiscent repulsion in this sound, as complex and unplaceable as any of the other dark impressions.

We were now, after a slow ascent, at a height of twenty-three thousand, five hundred and seventy feet according to the aneroid; and had left the region of clinging snow definitely below us. Up here were only dark, bare rock slopes and the start of rough-ribbed glaciers—but with

those provocative cubes, ramparts, and echoing cave-mouths to add a portent of the unnatural, the fantastic, and the dreamlike. Looking along the line of high peaks, I thought I could see the one mentioned by poor Lake, with a rampart exactly on top. It seemed to be half lost in a queer antarctic haze—such a haze, perhaps, as had been responsible for Lake's early notion of volcanism. The pass loomed directly before us, smooth and windswept between its jagged and malignly frowning pylons. Beyond it was a sky fretted with swirling vapors and lighted by the low polar sun—the sky of that mysterious farther realm upon which we felt no human eye had ever gazed.

A few more feet of altitude and we would behold that realm. Danforth and I, unable to speak except in shouts amidst the howling, piping wind that raced through the pass and added to the noise of the unmuffled engines, exchanged eloquent glances. And then, having gained those last few feet, we did indeed stare across the momentous divide and over the unsampled secrets of an elder and utterly alien earth.

V.

I think that both of us simultaneously cried out in mixed awe, wonder, terror, and disbelief in our own senses as we finally cleared the pass and saw what lay beyond.

Of course, we must have had some natural theory in the back of our heads to steady our faculties for the moment. Probably we thought of such things as the grotesquely weathered stones of the Garden of the Gods in Colorado, or the fantastically symmetrical wind-carved rocks of the Arizona desert. Perhaps we even half thought the sight a mirage like that we had seen the morning before on first approaching those mountains of madness. We must have had some such normal notions to fall back upon as our eyes swept that limitless, tempest-scarred plateau and grasped the almost endless labyrinth of colossal, regular, and geometrically eurythmic stone masses which reared their crumbled and pitted crests above a glacial sheet not more than forty or fifty feet deep at its thickest, and in places obviously thinner.

The effect of the monstrous sight was indescribable, for some fiendish violation of known natural law seemed certain at the outset. Here, on a hellishly ancient tableland fully twenty thousand feet high, and in a climate deadly to habitation since a pre-human age not less than five hundred thousand years ago, there stretched nearly to the vision's limit a tangle of orderly stone which only the desperation of mental self-defense could possibly attribute to any but a conscious and artificial cause. We had previously dismissed, so far as serious thought was

concerned, any theory that the cubes and ramparts of the mountainsides were other than natural in origin. How could they be otherwise, when man himself could scarcely have been differentiated from the great apes at the time when this region succumbed to the present unbroken reign of glacial death?

Yet now the sway of reason seemed irrefutably shaken, for this Cyclopean maze of squared, curved, and angled blocks had features which cut off all comfortable refuge. It was, very clearly, the blasphemous city of the mirage in stark, objective, and ineluctable reality. That damnable portent had had a material basis after all—there had been some horizontal stratum of ice dust in the upper air, and this shocking stone survival had projected its image across the mountains according to the simple laws of reflection. Of course, the phantom had been twisted and exaggerated, and had contained things which the real source did not contain; yet now, as we saw that real source, we thought it even more hideous and menacing than its distant image.

Only the incredible, unhuman massiveness of these vast stone towers and ramparts had saved the frightful things from utter annihilation in the hundreds of thousands—perhaps millions—of years it had brooded there amidst the blasts of a bleak upland. "Corona Mundi—Roof of the World—" All sorts of fantastic phrases sprang to

our lips as we looked dizzily down at the unbelievable spectacle. I thought again of the eldritch primal myths that had so persistently haunted me since my first sight of this dead antarctic world—of the demoniac plateau of Leng, of the Mi-Go, or abominable Snow-Men of the Himalayas, of the Pnakotic Manuscripts with their pre-human implications, of the Cthulhu cult, of the Necronomicon, and of the Hyperborean legends of formless Tsathoggua and the worse than formless star spawn associated with that semi-entity.

For boundless miles in every direction the thing stretched off with very little thinning; indeed, as our eyes followed it to the right and left along the base of the low, gradual foothills which separated it from the actual mountain rim, we decided that we could see no thinning at all except for an interruption at the left of the pass through which we had come. We had merely struck, at random, a limited part of something of incalculable extent. The foothills were more sparsely sprinkled with grotesque stone structures, linking the terrible city to the already familiar cubes and ramparts which evidently formed its mountain outposts. These latter, as well as the queer cave mouths, were as thick on the inner as on the outer sides of the mountains.

The nameless stone labyrinth consisted, for the most part, of walls from ten to one hundred and fifty

feet in ice-clear height, and of a thickness varying from five to ten feet. It was composed mostly of prodigious blocks of dark primordial slate, schist, and sandstone—blocks in many cases as large as $4 \times 6 \times 8$ feet—though in several places it seemed to be carved out of a solid, uneven bed-rock of pre-Cambrian slate. The buildings were far from equal in size, there being innumerable honeycomb arrangements of enormous extent as well as smaller separate structures. The general shape of these things tended to be conical, pyramidal, or terraced; though there were many perfect cylinders, perfect cubes, clusters of cubes, and other rectangular forms, and a peculiar sprinkling of angled edifices whose five-pointed ground plan roughly suggested modern fortifications. The builders had made constant and expert use of the principle of the arch, and domes had probably existed in the city's heyday.

The whole tangle was monstrously weathered, and the glacial surface from which the towers projected was strewn with fallen blocks and immemorial debris. Where the glaciation was transparent we could see the lower parts of the gigantic piles, and we noticed the ice-preserved stone bridges which connected the different towers at varying distances above the ground. On the exposed walls we could detect the scarred places where other and higher bridges of the same sort had existed. Closer inspection

revealed countless largish windows; some of which were closed with shutters of a petrified material originally wood, though most gaped open in a sinister and menacing fashion. Many of the ruins, of course, were roofless, and with uneven though wind-rounded upper edges; whilst others, of a more sharply conical or pyramidal model or else protected by higher surrounding structures, preserved intact outlines despite the omnipresent crumbling and pitting. With the field glass we could barely make out what seemed to be sculptural decorations in horizontal bands—decorations including those curious groups of dots whose presence on the ancient soapstones now assumed a vastly larger significance.

In many places the buildings were totally ruined and the ice sheet deeply riven from various geologic causes. In other places the stonework was worn down to the very level of the glaciation. One broad swath, extending from the plateau's interior, to a cleft in the foothills about a mile to the left of the pass we had traversed, was wholly free from buildings. It probably represented, we concluded, the course of some great river which in Tertiary times—millions of years ago—had poured through the city and into some prodigious subterranean abyss of the great barrier range. Certainly, this was above all a region of caves, gulfs, and underground secrets beyond human penetration.

Looking back to our sensations, and recalling our dazedness at viewing this monstrous survival from aeons we had thought pre-human, I can only wonder that we preserved the semblance of equilibrium, which we did. Of course, we knew that something—chronology, scientific theory, or our own consciousness—was woefully awry; yet we kept enough poise to guide the plane, observe many things quite minutely, and take a careful series of photographs which may yet serve both us and the world in good stead. In my case, ingrained scientific habit may have helped; for above all my bewilderment and sense of menace, there burned a dominant curiosity to fathom more of this age-old secret—to know what sort of beings had built and lived in this incalculably gigantic place, and what relation to the general world of its time or of other times so unique a concentration of life could have had.

For this place could be no ordinary city. It must have formed the primary nucleus and center of some archaic and unbelievable chapter of earth's history whose outward ramifications, recalled only dimly in the most obscure and distorted myths, had vanished utterly amidst the chaos of terrene convulsions long before any human race we know had shambled out of apedom. Here sprawled a Palaeogean megalopolis compared with which the fabled Atlantis and Lemuria, Commoriom and Uzuldaroum, and Olathoë in

the land of Lomar, are recent things of today—not even of yesterday; a megalopolis ranking with such whispered pre-human blasphemies as Valusia, R'lyeh, Ib in the land of Mnar, and the Nameless city of Arabia Deserta. As we flew above that tangle of stark titan towers my imagination sometimes escaped all bounds and roved aimlessly in realms of fantastic associations—even weaving links betwixt this lost world and some of my own wildest dreams concerning the mad horror at the camp.

The plane's fuel tank, in the interest of greater lightness, had been only partly filled; hence we now had to exert caution in our explorations. Even so, however, we covered an enormous extent of ground—or, rather, air—after swooping down to a level where the wind became virtually negligible. There seemed to be no limit to the mountain range, or to the length of the frightful stone city which bordered its inner foothills. Fifty miles of flight in each direction showed no major change in the labyrinth of rock and masonry that clawed up corpse-like through the eternal ice. There were, though, some highly absorbing diversifications; such as the carvings on the canyon where that broad river had once pierced the foothills and approached its sinking place in the great range. The headlands at the stream's entrance had been boldly carved into Cyclopean pylons; and something about the ridgy,

barrel-shaped designs stirred up oddly vague, hateful, and confusing semi-remembrances in both Danforth and me.

We also came upon several star-shaped open spaces, evidently public squares, and noted various undulations in the terrain. Where a sharp hill rose, it was generally hollowed out into some sort of rambling-stone edifice; but there were at least two exceptions. Of these latter, one was too badly weathered to disclose what had been on the jutting eminence, while the other still bore a fantastic conical monument carved out of the solid rock and roughly resembling such things as the well-known Snake Tomb in the ancient valley of Petra.

Flying inland from the mountains, we discovered that the city was not of infinite width, even though its length along the foothills seemed endless. After about thirty miles the grotesque stone buildings began to thin out, and in ten more miles we came to an unbroken waste virtually without signs of sentient artifice. The course of the river beyond the city seemed marked by a broad, depressed line, while the land assumed a somewhat greater ruggedness, seeming to slope slightly upward as it receded in the mist-hazed west.

So far we had made no landing, yet to leave the plateau without an attempt at entering some of the monstrous structures would have been inconceivable. Accordingly, we decided to find a smooth place on

the foothills near our navigable pass, there grounding the plane and preparing to do some exploration on foot. Though these gradual slopes were partly covered with a scattering of ruins, low flying soon disclosed an ample number of possible landing-places. Selecting that nearest to the pass, since our flight would be across the great range and back to camp, we succeeded about 12:30 p.m. in effecting a landing on a smooth, hard snow-field wholly devoid of obstacles and well adapted to a swift and favorable take-off later on.

It did not seem necessary to protect the plane with a snow banking for so brief a time and in so comfortable an absence of high winds at this level; hence we merely saw that the landing skis were safely lodged, and that the vital parts of the mechanism were guarded against the cold. For our foot journey we discarded the heaviest of our flying furs, and took with us a small outfit consisting of pocket compass, hand camera, light provisions, voluminous notebooks and paper, geologist's hammer and chisel, specimen-bags, coil of climbing rope, and powerful electric torches with extra batteries; this equipment having been carried in the plane on the chance that we might be able to effect a landing, take ground pictures, make drawings and topographical sketches, and obtain rock specimens from some bare slope, outcropping, or mountain cave. Fortunately we had a supply of extra paper to tear up, place in a spare

specimen-bag, and use on the ancient principle of hare-and-hounds for marking our course in any interior mazes we might be able to penetrate. This had been brought in case we found some cave system with air quiet enough to allow such a rapid and easy method in place of the usual rock-chipping method of trail-blazing.

Walking cautiously downhill over the crusted snow toward the stupendous stone labyrinth that loomed against the opalescent west, we felt almost as keen a sense of imminent marvels as we had felt on approaching the unfathomed mountain pass four hours previously. True, we had become visually familiar with the incredible secret concealed by the barrier peaks; yet the prospect of actually entering primordial walls reared by conscious beings perhaps millions of years ago—before any known race of men could have existed—was none the less awesome and potentially terrible in its implications of cosmic abnormality. Though the thinness of the air at this prodigious altitude made exertion somewhat more difficult than usual, both Danforth and I found ourselves bearing up very well, and felt equal to almost any task which might fall to our lot. It took only a few steps to bring us to a shapeless ruin worn level with the snow, while ten or fifteen rods farther on there was a huge, roofless rampart still complete in its gigantic five-pointed outline and rising to an irregular

height of ten or eleven feet. For this latter we headed; and when at last we were actually able to touch its weathered Cyclopean blocks, we felt that we had established an unprecedented and almost blasphemous link with forgotten aeons normally closed to our species.

This rampart, shaped like a star and perhaps three hundred feet from point to point, was built of Jurassic sandstone blocks of irregular size, averaging 6 × 8 feet in surface. There was a row of arched loopholes or windows about four feet wide and five feet high, spaced quite symmetrically along the points of the star and at its inner angles, and with the bottoms about four feet from the glaciated surface. Looking through these, we could see that the masonry was fully five feet thick, that there were no partitions remaining within, and that there were traces of banded carvings or bas-reliefs on the interior walls—facts we had indeed guessed before, when flying low over this rampart and others like it. Though lower parts must have originally existed, all traces of such things were now wholly obscured by the deep layer of ice and snow at this point.

We crawled through one of the windows and vainly tried to decipher the nearly effaced mural designs, but did not attempt to disturb the glaciated floor. Our orientation flights had indicated that many buildings in the city proper were less ice-choked, and that we might perhaps find wholly clear interiors

leading down to the true ground level if we entered those structures still roofed at the top. Before we left the rampart we photographed it carefully, and studied its mortarless Cyclopean masonry with complete bewilderment. We wished that Pabodie were present, for his engineering knowledge might have helped us guess how such titanic blocks could have been handled in that unbelievably remote age when the city and its outskirts were built up.

The half-mile walk downhill to the actual city, with the upper wind shrieking vainly and savagely through the skyward peaks in the background, was something of which the smallest details will always remain engraved on my mind. Only in fantastic nightmares could any human beings but Danforth and me conceive such optical effects. Between us and the churning vapors of the west lay that monstrous tangle of dark stone towers, its outré and incredible forms impressing us afresh at every new angle of vision. It was a mirage in solid stone, and were it not for the photographs, I would still doubt that such a thing could be. The general type of masonry was identical with that of the rampart we had examined; but the extravagant shapes which this masonry took in its urban manifestations were past all description.

Even the pictures illustrate only one or two phases of its endless variety, preternatural massiveness,

and utterly alien exoticism. There were geometrical forms for which an Euclid would scarcely find a name—cones of all degrees of irregularity and truncation, terraces of every sort of provocative disproportion, shafts with odd bulbous enlargements, broken columns in curious groups, and five-pointed or five-ridged arrangements of mad grotesqueness. As we drew nearer we could see beneath certain transparent parts of the ice-sheet, and detect some of the tubular stone bridges that connected the crazily sprinkled structures at various heights. Of orderly streets there seemed to be none, the only broad open swath being a mile to the left, where the ancient river had doubtless flowed through the town into the mountains.

Our field-glasses showed the external, horizontal bands of nearly effaced sculptures and dot-groups to be very prevalent, and we could half imagine what the city must once have looked like—even though most of the roofs and tower tops had necessarily perished. As a whole, it had been a complex tangle of twisted lanes and alleys, all of them deep canyons, and some little better than tunnels because of the overhanging masonry or overarching bridges. Now, outspread below us, it loomed like a dream fantasy against a westward mist through whose northern end the low, reddish antarctic sun of early afternoon was struggling to shine; and when, for a moment, that

sun encountered a denser obstruction and plunged the scene into temporary shadow, the effect was subtly menacing in a way I can never hope to depict. Even the faint howling and piping of the unfelt wind in the great mountain passes behind us took on a wilder note of purposeful malignity. The last stage of our descent to the town was unusually steep and abrupt, and a rock outcropping at the edge where the grade changed led us to think that an artificial terrace had once existed there. Under the glaciation, we believed, there must be a flight of steps or its equivalent.

When at last we plunged into the town itself, clambering over fallen masonry and shrinking from the oppressive nearness and dwarfing height of omnipresent crumbling and pitted walls, our sensations again became such that I marvel at the amount of self-control we retained. Danforth was frankly jumpy, and began making some offensively irrelevant speculations about the horror at the camp—which I resented all the more because I could not help sharing certain conclusions forced upon us by many features of this morbid survival from nightmare antiquity. The speculations worked on his imagination, too; for in one place—where a debris-littered alley turned a sharp corner—he insisted that he saw faint traces of ground markings which he did not like; whilst elsewhere he stopped to listen to a subtle, imaginary sound from

some undefined point—a muffled musical piping, he said, not unlike that of the wind in the mountain caves, yet somehow disturbingly different. The ceaseless five-pointedness of the surrounding architecture and of the few distinguishable mural arabesques had a dimly sinister suggestiveness we could not escape, and gave us a touch of terrible subconscious certainty concerning the primal entities which had reared and dwelt in this unhallowed place.

Nevertheless, our scientific and adventurous souls were not wholly dead, and we mechanically carried out our program of chipping specimens from all the different rock types represented in the masonry. We wished a rather full set in order to draw better conclusions regarding the age of the place. Nothing in the great outer walls seemed to date from later than the Jurassic and Comanchian periods, nor was any piece of stone in the entire place of a greater recency than the Pliocene Age. In stark certainty, we were wandering amidst a death which had reigned at least five hundred thousand years, and in all probability even longer.

As we proceeded through this maze of stone-shadowed twilight we stopped at all available apertures to study interiors and investigate entrance possibilities. Some were above our reach, whilst others led only into ice-choked ruins as unroofed and barren as the rampart on the hill. One, though spacious

and inviting, opened on a seemingly bottomless abyss without visible means of descent. Now and then we had a chance to study the petrified wood of a surviving shutter, and were impressed by the fabulous antiquity implied in the still discernible grain. These things had come from Mesozoic gymnosperms and conifers—especially Cretaceous cycads—and from fan palms and early angiosperms of plainly Tertiary date. Nothing definitely later than the Pliocene could be discovered. In the placing of these shutters—whose edges showed the former presence of queer and long-vanished hinges—usage seemed to be varied—some being on the outer and some on the inner side of the deep embrasures. They seemed to have become wedged in place, thus surviving the rusting of their former and probably metallic fixtures and fastenings.

After a time we came across a row of windows—in the bulges of a colossal five-edged cone of undamaged apex—which led into a vast, well-preserved room with stone flooring; but these were too high in the room to permit descent without a rope. We had a rope with us, but did not wish to bother with this twenty-foot drop unless obliged to—especially in this thin plateau air where great demands were made upon the heart action. This enormous room was probably a hall or concourse of some sort, and our electric torches showed bold, distinct, and potentially startling sculptures

arranged round the walls in broad, horizontal bands separated by equally broad strips of conventional arabesques. We took careful note of this spot, planning to enter here unless a more easily gained interior were encountered.

Finally, though, we did encounter exactly the opening we wished; an archway about six feet wide and ten feet high, marking the former end of an aerial bridge which had spanned an alley about five feet above the present level of glaciation. These archways, of course, were flush with upper-story floors, and in this case one of the floors still existed. The building thus accessible was a series of rectangular terraces on our left facing westward. That across the alley, where the other archway yawned, was a decrepit cylinder with no windows and with a curious bulge about ten feet above the aperture. It was totally dark inside, and the archway seemed to open on a well of illimitable emptiness.

Heaped debris made the entrance to the vast left-hand building doubly easy, yet for a moment we hesitated before taking advantage of the long-wished chance. For though we had penetrated into this tangle of archaic mystery, it required fresh resolution to carry us actually inside a complete and surviving building of a fabulous elder world whose nature was becoming more and more hideously plain to us. In the end, however, we made the plunge, and scrambled up

over the rubble into the gaping embrasure. The floor beyond was of great slate slabs, and seemed to form the outlet of a long, high corridor with sculptured walls.

Observing the many inner archways which led off from it, and realizing the probable complexity of the nest of apartments within, we decided that we must begin our system of hare-and-hound trail-blazing. Hitherto our compasses, together with frequent glimpses of the vast mountain range between the towers in our rear, had been enough to prevent our losing our way; but from now on, the artificial substitute would be necessary. Accordingly we reduced our extra paper to shreds of suitable size, placed these in a bag to be carried by Danforth, and prepared to use them as economically as safety would allow. This method would probably gain us immunity from straying, since there did not appear to be any strong air currents inside the primordial masonry. If such should develop, or if our paper supply should give out, we could of course fall back on the more secure though more tedious and retarding method of rock-chipping.

Just how extensive a territory we had opened up, it was impossible to guess without a trial. The close and frequent connection of the different buildings made it likely that we might cross from one to another on bridges underneath the ice, except where impeded by local collapses

and geologic rifts, for very little glaciation seemed to have entered the massive constructions. Almost all the areas of transparent ice had revealed the submerged windows as tightly shuttered, as if the town had been left in that uniform state until the glacial sheet came to crystallize the lower part for all succeeding time. Indeed, one gained a curious impression that this place had been deliberately closed and deserted in some dim, bygone aeon, rather than overwhelmed by any sudden calamity or even gradual decay. Had the coming of the ice been foreseen, and had a nameless population left en masse to seek a less doomed abode? The precise physiographic conditions attending the formation of the ice-sheet at this point would have to wait for later solution. It had not, very plainly, been a grinding drive. Perhaps the pressure of accumulated snows had been responsible, and perhaps some flood from the river, or from the bursting of some ancient glacial dam in the great range, had helped to create the special state now observable. Imagination could conceive almost anything in connection with this place.

VI.

It would be cumbersome to give a detailed, consecutive account of our wanderings inside that cavernous, aeon-dead honeycomb of primal masonry—that monstrous lair of elder secrets

which now echoed for the first time, after uncounted epochs, to the tread of human feet. This is especially true because so much of the horrible drama and revelation came from a mere study of the omnipresent mural carvings. Our flashlight photographs of those carvings will do much toward proving the truth of what we are now disclosing, and it is lamentable that we had not a larger film supply with us. As it was, we made crude notebook sketches of certain salient features after all our films were used up.

The building which we had entered was one of great size and elaborateness, and gave us an impressive notion of the architecture of that nameless geologic past. The inner partitions were less massive than the outer walls, but on the lower levels were excellently preserved. Labyrinthine complexity, involving curiously irregular differences in floor levels, characterized the entire arrangement; and we should certainly have been lost at the very outset but for the trail of torn paper left behind us. We decided to explore the more decrepit upper parts first of all, hence climbed aloft in the maze for a distance of some one hundred feet, to where the topmost tier of chambers yawned snowily and ruinously open to the polar sky. Ascent was effected over the steep, transversely ribbed stone ramps or inclined planes which everywhere served in lieu of stairs. The rooms we

encountered were of all imaginable shapes and proportions, ranging from five-pointed stars to triangles and perfect cubes. It might be safe to say that their general average was about 30 × 30 feet in floor area, and 20 feet in height, though many larger apartments existed. After thoroughly examining the upper regions and the glacial level, we descended, story by story, into the submerged part, where indeed we soon saw we were in a continuous maze of connected chambers and passages probably leading over unlimited areas outside this particular building. The Cyclopean massiveness and gigantism of everything about us became curiously oppressive; and there was something vaguely but deeply unhuman in all the contours, dimensions, proportions, decorations, and constructional nuances of the blasphemously archaic stonework. We soon realized, from what the carvings revealed, that this monstrous city was many million years old.

We cannot yet explain the engineering principles used in the anomalous balancing and adjustment of the vast rock masses, though the function of the arch was clearly much relied on. The rooms we visited were wholly bare of all portable contents, a circumstance which sustained our belief in the city's deliberate desertion. The prime decorative feature was the almost universal system of mural sculpture, which tended to run in continuous horizontal bands three feet wide and

arranged from floor to ceiling in alternation with bands of equal width given over to geometrical arabesques. There were exceptions to this rule of arrangement, but its preponderance was overwhelming. Often, however, a series of smooth cartouches containing oddly patterned groups of dots would be sunk along one of the arabesque bands.

The technique, we soon saw, was mature, accomplished, and aesthetically evolved to the highest degree of civilized mastery, though utterly alien in every detail to any known art tradition of the human race. In delicacy of execution no sculpture I have ever seen could approach it. The minutest details of elaborate vegetation, or of animal life, were rendered with astonishing vividness despite the bold scale of the carvings; whilst the conventional designs were marvels of skillful intricacy. The arabesques displayed a profound use of mathematical principles, and were made up of obscurely symmetrical curves and angles based on the quantity of five. The pictorial bands followed a highly formalized tradition, and involved a peculiar treatment of perspective, but had an artistic force that moved us profoundly, notwithstanding the intervening gulf of vast geologic periods. Their method of design hinged on a singular juxtaposition of the cross-section with the two-dimensional silhouette, and embodied an analytical psychology beyond that

of any known race of antiquity. It is useless to try to compare this art with any represented in our museums. Those who see our photographs will probably find its closest analogue in certain grotesque conceptions of the most daring futurists.

The arabesque tracery consisted altogether of depressed lines, whose depth on unweathered walls varied from one to two inches. When cartouches with dot-groups appeared—evidently as inscriptions in some unknown and primordial language and alphabet—the depression of the smooth surface was perhaps an inch and a half, and of the dots perhaps a half inch more. The pictorial bands were in countersunk low relief, their background being depressed about two inches from the original wall surface. In some specimens marks of a former coloration could be detected, though for the most part the untold aeons had disintegrated and banished any pigments which may have been applied. The more one studied the marvelous technique, the more one admired the things. Beneath their strict conventionalization one could grasp the minute and accurate observation and graphic skill of the artists; and indeed, the very conventions themselves served to symbolize and accentuate the real essence or vital differentiation of every object delineated. We felt, too, that besides these recognizable excellences there were others lurking beyond the reach of our perceptions. Certain touches

here and there gave vague hints of latent symbols and stimuli which another mental and emotional background, and a fuller or different sensory equipment, might have made of profound and poignant significance to us.

The subject matter of the sculptures obviously came from the life of the vanished epoch of their creation, and contained a large proportion of evident history. It is this abnormal historic-mindedness of the primal race—a chance circumstance operating, through coincidence, miraculously in our favor—which made the carvings so awesomely informative to us, and which caused us to place their photography and transcription above all other considerations. In certain rooms the dominant arrangement was varied by the presence of maps, astronomical charts, and other scientific designs of an enlarged scale—these things giving a naive and terrible corroboration to what we gathered from the pictorial friezes and dadoes. In hinting at what the whole revealed, I can only hope that my account will not arouse a curiosity greater than sane caution on the part of those who believe me at all. It would be tragic if any were to be allured to that realm of death and horror by the very warning meant to discourage them.

Interrupting these sculptured walls were high windows and massive twelve-foot doorways; both now and then retaining the petrified wooden

planks—elaborately carved and polished—of the actual shutters and doors. All metal fixtures had long ago vanished, but some of the doors remained in place and had to be forced aside as we progressed from room to room. Window-frames with odd transparent panes—mostly elliptical—survived here and there, though in no considerable quantity. There were also frequent niches of great magnitude, generally empty, but once in a while containing some bizarre object carved from green soapstone which was either broken or perhaps held too inferior to warrant removal. Other apertures were undoubtedly connected with bygone mechanical facilities—heating, lighting, and the like—of a sort suggested in many of the carvings. Ceilings tended to be plain, but had sometimes been inlaid with green soapstone or other tiles, mostly fallen now. Floors were also paved with such tiles, though plain stonework predominated.

As I have said, all furniture and other movables were absent; but the sculptures gave a clear idea of the strange devices which had once filled these tomb-like, echoing rooms. Above the glacial sheet the floors were generally thick with detritus, litter, and debris, but farther down this condition decreased. In some of the lower chambers and corridors there was little more than gritty dust or ancient incrustations, while occasional areas had an uncanny air of newly swept immaculateness. Of

course, where rifts or collapses had occurred, the lower levels were as littered as the upper ones. A central court—as in other structures we had seen from the air—saved the inner regions from total darkness; so that we seldom had to use our electric torches in the upper rooms except when studying sculptured details. Below the ice cap, however, the twilight deepened; and in many parts of the tangled ground level there was an approach to absolute blackness.

To form even a rudimentary idea of our thoughts and feelings as we penetrated this aeon-silent maze of unhuman masonry, one must correlate a hopelessly bewildering chaos of fugitive moods, memories, and impressions. The sheer appalling antiquity and lethal desolation of the place were enough to overwhelm almost any sensitive person, but added to these elements were the recent unexplained horror at the camp, and the revelations all too soon effected by the terrible mural sculptures around us. The moment we came upon a perfect section of carving, where no ambiguity of interpretation could exist, it took only a brief study to give us the hideous truth—a truth which it would be naive to claim Danforth and I had not independently suspected before, though we had carefully refrained from even hinting it to each other. There could now be no further merciful doubt about the nature of the beings which had built and inhabited this monstrous dead

city millions of years ago, when man's ancestors were primitive archaic mammals, and vast dinosaurs roamed the tropical steppes of Europe and Asia.

We had previously clung to a desperate alternative and insisted—each to himself—that the omnipresence of the five-pointed motifs meant only some cultural or religious exaltation of the Archaean natural object which had so patently embodied the quality of five-pointedness; as the decorative motifs of Minoan Crete exalted the sacred bull, those of Egypt the scarabaeus, those of Rome the wolf and the eagle, and those of various savage tribes some chosen totem animal. But this lone refuge was now stripped from us, and we were forced to face definitely the reason-shaking realization which the reader of these pages has doubtless long ago anticipated. I can scarcely bear to write it down in black and white even now, but perhaps that will not be necessary.

The things once rearing and dwelling in this frightful masonry in the age of dinosaurs were not indeed dinosaurs, but far worse. Mere dinosaurs were new and almost brainless objects—but the builders of the city were wise and old, and had left certain traces in rocks even then laid down well nigh a thousand million years—rocks laid down before the true life of earth had advanced beyond plastic groups of cells—rocks laid down before the

true life of earth had existed at all. They were the makers and enslavers of that life, and above all doubt the originals of the fiendish elder myths which things like the Pnakotic Manuscripts and the Necronomicon affrightedly hint about. They were the great “Old Ones” that had filtered down from the stars when earth was young—the beings whose substance an alien evolution had shaped, and whose powers were such as this planet had never bred. And to think that only the day before Danforth and I had actually looked upon fragments of their millennially fossilized substance—and that poor Lake and his party had seen their complete outlines....

It is of course impossible for me to relate in proper order the stages by which we picked up what we know of that monstrous chapter of pre-human life. After the first shock of the certain revelation, we had to pause a while to recuperate, and it was fully three o'clock before we got started on our actual tour of systematic research. The sculptures in the building we entered were of relatively late date—perhaps two million years ago—as checked up by geological, biological, and astronomical features—and embodied an art which would be called decadent in comparison with that of specimens we found in older buildings after crossing bridges under the glacial sheet. One edifice hewn from the solid rock seemed to go back forty or possibly even fifty million

years—to the lower Eocene or upper Cretaceous—and contained bas-reliefs of an artistry surpassing anything else, with one tremendous exception, that we encountered. That was, we have since agreed, the oldest domestic structure we traversed.

Were it not for the support of those photographs soon to be made public, I would refrain from telling what I found and inferred, lest I be confined as a madman. Of course, the infinitely early parts of the patchwork tale—representing the pre-terrestrial life of the star-headed beings on other planets, in other galaxies, and in other universes—can readily be interpreted as the fantastic mythology of those beings themselves; yet such parts sometimes involved designs and diagrams so uncannily close to the latest findings of mathematics and astrophysics that I scarcely know what to think. Let others judge when they see the photographs I shall publish.

Naturally, no one set of carvings which we encountered told more than a fraction of any connected story, nor did we even begin to come upon the various stages of that story in their proper order. Some of the vast rooms were independent units so far as their designs were concerned, whilst in other cases a continuous chronicle would be carried through a series of rooms and corridors. The best of the maps and diagrams were on the walls of a frightful abyss below even the ancient ground level—a cavern perhaps two hundred

feet square and sixty feet high, which had almost undoubtedly been an educational center of some sort. There were many provoking repetitions of the same material in different rooms and buildings, since certain chapters of experience, and certain summaries or phases of racial history, had evidently been favorites with different decorators or dwellers. Sometimes, though, variant versions of the same theme proved useful in settling debatable points and filling up gaps.

I still wonder that we deduced so much in the short time at our disposal. Of course, we even now have only the barest outline—and much of that was obtained later on from a study of the photographs and sketches we made. It may be the effect of this later study—the revived memories and vague impressions acting in conjunction with his general sensitiveness and with that final supposed horror-glimpse whose essence he will not reveal even to me—which has been the immediate source of Danforth's present breakdown. But it had to be; for we could not issue our warning intelligently without the fullest possible information, and the issuance of that warning is a prime necessity. Certain lingering influences in that unknown antarctic world of disordered time and alien natural law make it imperative that further exploration be discouraged.

VII.

The full story, so far as deciphered, will eventually appear in an official bulletin of Miskatonic University. Here I shall sketch only the salient highlights in a formless, rambling way. Myth or otherwise, the sculptures told of the coming of those star-headed things to the nascent, lifeless earth out of cosmic space—their coming, and the coming of many other alien entities such as at certain times embark upon spatial pioneering. They seemed able to traverse the interstellar ether on their vast membranous wings—thus oddly confirming some curious hill folklore long ago told me by an antiquarian colleague. They had lived under the sea a good deal, building fantastic cities and fighting terrific battles with nameless adversaries by means of intricate devices employing unknown principles of energy. Evidently their scientific and mechanical knowledge far surpassed man's today, though they made use of its more widespread and elaborate forms only when obliged to. Some of the sculptures suggested that they had passed through a stage of mechanized life on other planets, but had receded upon finding its effects emotionally unsatisfying. Their preternatural toughness of organization and simplicity of natural wants made them peculiarly able to live on a

high plane without the more specialized fruits of artificial manufacture, and even without garments, except for occasional protection against the elements.

It was under the sea, at first for food and later for other purposes, that they first created earth-life—using available substances according to long-known methods. The more elaborate experiments came after the annihilation of various cosmic enemies. They had done the same thing on other planets, having manufactured not only necessary foods, but certain multicellular protoplasmic masses capable of molding their tissues into all sorts of temporary organs under hypnotic influence and thereby forming ideal slaves to perform the heavy work of the community. These viscous masses were without doubt what Abdul Alhazred whispered about as the “Shoggoths” in his frightful *Necronomicon*, though even that mad Arab had not hinted that any existed on earth except in the dreams of those who had chewed a certain alkaloidal herb. When the star-headed Old Ones on this planet had synthesized their simple food forms and bred a good supply of Shoggoths, they allowed other cell-groups to develop into other forms of animal and vegetable life for sundry purposes, extirpating any whose presence became troublesome.

With the aid of the Shoggoths, whose expansions could be made to lift prodigious weights, the small,

low cities under the sea grew to vast and imposing labyrinths of stone not unlike those which later rose on land. Indeed, the highly adaptable Old Ones had lived much on land in other parts of the universe, and probably retained many traditions of land construction. As we studied the architecture of all these sculptured palaeogean cities, including that whose aeon-dead corridors we were even then traversing, we were impressed by a curious coincidence which we have not yet tried to explain, even to ourselves. The tops of the buildings, which in the actual city around us had, of course, been weathered into shapeless ruins ages ago, were clearly displayed in the bas-reliefs, and showed vast clusters of needle-like spires, delicate finials on certain cone and pyramid apexes, and tiers of thin, horizontal scalloped disks capping cylindrical shafts. This was exactly what we had seen in that monstrous and portentous mirage, cast by a dead city whence such skyline features had been absent for thousands and tens of thousands of years, which loomed on our ignorant eyes across the unfathomed mountains of madness as we first approached poor Lake's ill-fated camp.

Of the life of the Old Ones, both under the sea and after part of them migrated to land, volumes could be written. Those in shallow water had continued the fullest use of the eyes at the ends of their five main head tentacles, and had practiced the arts

of sculpture and of writing in quite the usual way—the writing accomplished with a stylus on waterproof waxen surfaces. Those lower down in the ocean depths, though they used a curious phosphorescent organism to furnish light, pieced out their vision with obscure special senses operating through the prismatic cilia on their heads—senses which rendered all the Old Ones partly independent of light in emergencies. Their forms of sculpture and writing had changed curiously during the descent, embodying certain apparently chemical coating processes—probably to secure phosphorescence—which the bas-reliefs could not make clear to us. The beings moved in the sea partly by swimming—using the lateral crinoid arms—and partly by wriggling with the lower tier of tentacles containing the pseudo-feet. Occasionally they accomplished long swoops with the auxiliary use of two or more sets of their fan-like folding wings. On land they locally used the pseudofeet, but now and then flew to great heights or over long distances with their wings. The many slender tentacles into which the crinoid arms branched were infinitely delicate, flexible, strong, and accurate in muscular-nervous coordination—ensuring the utmost skill and dexterity in all artistic and other manual operations.

The toughness of the things was almost incredible. Even the terrific pressure of the deepest sea-bottoms

appeared powerless to harm them. Very few seemed to die at all except by violence, and their burial-places were very limited. The fact that they covered their vertically inhumed dead with five-pointed inscribed mounds set up thoughts in Danforth and me which made a fresh pause and recuperation necessary after the sculptures revealed it. The beings multiplied by means of spores—like vegetable pteridophytes, as Lake had suspected—but, owing to their prodigious toughness and longevity, and consequent lack of replacement needs, they did not encourage the large-scale development of new prothallia except when they had new regions to colonize. The young matured swiftly, and received an education evidently beyond any standard we can imagine. The prevailing intellectual and aesthetic life was highly evolved, and produced a tenaciously enduring set of customs and institutions which I shall describe more fully in my coming monograph. These varied slightly according to sea or land residence, but had the same foundations and essentials.

Though able, like vegetables, to derive nourishment from inorganic substances, they vastly preferred organic and especially animal food. They ate uncooked marine life under the sea, but cooked their viands on land. They hunted game and raised meat herds—slaughtering with sharp weapons whose odd marks on certain fossil bones our expedition

had noted. They resisted all ordinary temperatures marvelously, and in their natural state could live in water down to freezing. When the great chill of the Pleistocene drew on, however—nearly a million years ago—the land dwellers had to resort to special measures, including artificial heating—until at last the deadly cold appears to have driven them back into the sea. For their prehistoric flights through cosmic space, legend said, they absorbed certain chemicals and became almost independent of eating, breathing, or heat conditions—but by the time of the great cold they had lost track of the method. In any case they could not have prolonged the artificial state indefinitely without harm.

Being non-pairing and semi-vegetable in structure, the Old Ones had no biological basis for the family phase of mammal life, but seemed to organize large households on the principles of comfortable space-utility and—as we deduced from the pictured occupations and diversions of co-dwellers—congenial mental association. In furnishing their homes they kept everything in the center of the huge rooms, leaving all the wall spaces free for decorative treatment. Lighting, in the case of the land inhabitants, was accomplished by a device probably electro-chemical in nature. Both on land and under water they used curious tables, chairs and couches like cylindrical frames—for they rested and slept upright with folded-down

tentacles—and racks for hinged sets of dotted surfaces forming their books.

Government was evidently complex and probably socialistic, though no certainties in this regard could be deduced from the sculptures we saw. There was extensive commerce, both local and between different cities—certain small, flat counters, five-pointed and inscribed, serving as money. Probably the smaller of the various greenish soap-stones found by our expedition were pieces of such currency. Though the culture was mainly urban, some agriculture and much stock raising existed. Mining and a limited amount of manufacturing were also practiced. Travel was very frequent, but permanent migration seemed relatively rare except for the vast colonizing movements by which the race expanded. For personal locomotion no external aid was used, since in land, air, and water movement alike the Old Ones seemed to possess excessively vast capacities for speed. Loads, however, were drawn by beasts of burden—Shoggoths under the sea, and a curious variety of primitive vertebrates in the later years of land existence.

These vertebrates, as well as an infinity of other life forms—animal and vegetable, marine, terrestrial, and aerial—were the products of unguided evolution acting on life cells made by the Old Ones, but escaping beyond their radius of attention. They had been suffered

to develop unchecked because they had not come in conflict with the dominant beings. Bothersome forms, of course, were mechanically exterminated. It interested us to see in some of the very last and most decadent sculptures a shambling, primitive mammal, used sometimes for food and sometimes as an amusing buffoon by the land dwellers, whose vaguely simian and human foreshadowings were unmistakable. In the building of land cities the huge stone blocks of the high towers were generally lifted by vast-winged pterodactyls of a species heretofore unknown to paleontology.

The persistence with which the Old Ones survived various geologic changes and convulsions of the earth's crust was little short of miraculous. Though few or none of their first cities seem to have remained beyond the Archaean Age, there was no interruption in their civilization or in the transmission of their records. Their original place of advent to the planet was the Antarctic Ocean, and it is likely that they came not long after the matter forming the moon was wrenched from the neighboring South Pacific. According to one of the sculptured maps the whole globe was then under water, with stone cities scattered farther and farther from the antarctic as aeons passed. Another map shows a vast bulk of dry land around the south pole, where it is evident that some of the beings made experimental settlements, though

their main centers were transferred to the nearest sea bottom. Later maps, which display the land mass as cracking and drifting, and sending certain detached parts northward, uphold in a striking way the theories of continental drift lately advanced by Taylor, Wegener, and Joly.

With the upheaval of new land in the South Pacific tremendous events began. Some of the marine cities were hopelessly shattered, yet that was not the worst misfortune. Another race—a land race of beings shaped like octopi and probably corresponding to fabulous pre-human spawn of Cthulhu—soon began filtering down from cosmic infinity and precipitated a monstrous war which for a time drove the Old Ones wholly back to the sea—a colossal blow in view of the increasing land settlements. Later peace was made, and the new lands were given to the Cthulhu spawn whilst the Old Ones held the sea and the older lands. New land cities were founded—the greatest of them in the antarctic, for this region of first arrival was sacred. From then on, as before, the antarctic remained the center of the Old Ones' civilization, and all the cities built there by the Cthulhu spawn were blotted out. Then suddenly the lands of the Pacific sank again, taking with them the frightful stone city of R'lyeh and all the cosmic octopi, so that the Old Ones were again supreme on the planet except for one shadowy fear about which they did not like to

speak. At a rather later age their cities dotted all the land and water areas of the globe—hence the recommendation in my coming monograph that some archaeologist make systematic borings with Pabodie's type of apparatus in certain widely separated regions.

The steady trend down the ages was from water to land—a movement encouraged by the rise of new land masses, though the ocean was never wholly deserted. Another cause of the landward movement was the new difficulty in breeding and managing the Shoggoths upon which successful sea life depended. With the march of time, as the sculptures sadly confessed, the art of creating new life from inorganic matter had been lost, so that the Old Ones had to depend on the molding of forms already in existence. On land the great reptiles proved highly tractable; but the Shoggoths of the sea, reproducing by fission and acquiring a dangerous degree of accidental intelligence, presented for a time a formidable problem.

They had always been controlled through the hypnotic suggestions of the Old Ones, and had modeled their tough plasticity into various useful temporary limbs and organs; but now their self-modeling powers were sometimes exercised independently, and in various imitative forms implanted by past suggestion. They had, it seems, developed a semi-stable brain whose separate and occasionally stubborn volition

echoed the will of the Old Ones without always obeying it. Sculptured images of these Shoggoths filled Danforth and me with horror and loathing. They were normally shapeless entities composed of a viscous jelly which looked like an agglutination of bubbles, and each averaged about fifteen feet in diameter when a sphere. They had, however, a constantly shifting shape and volume—throwing out temporary developments or forming apparent organs of sight, hearing, and speech in imitation of their masters, either spontaneously or according to suggestion.

They seem to have become peculiarly intractable toward the middle of the Permian Age, perhaps one hundred and fifty million years ago, when a veritable war of re-subjugation was waged upon them by the marine Old Ones. Pictures of this war, and of the headless, slime-coated fashion in which the Shoggoths typically left their slain victims, held a marvelously fearsome quality despite the intervening abyss of untold ages. The Old Ones had used curious weapons of molecular and atomic disturbances against the rebel entities, and in the end had achieved a complete victory. Thereafter the sculptures showed a period in which Shoggoths were tamed and broken by armed Old Ones as the wild horses of the American west were tamed by cowboys. Though during the rebellion the Shoggoths had shown an

ability to live out of water, this transition was not encouraged—since their usefulness on land would hardly have been commensurate with the trouble of their management.

During the Jurassic Age the Old Ones met fresh adversity in the form of a new invasion from outer space—this time by half-fungous, half-crustacean creatures—creatures undoubtedly the same as those figuring in certain whispered hill legends of the north, and remembered in the Himalayas as the Mi-Go, or abominable Snow-Men. To fight these beings the Old Ones attempted, for the first time since their terrene advent, to sally forth again into the planetary ether; but, despite all traditional preparations, found it no longer possible to leave the earth's atmosphere. Whatever the old secret of interstellar travel had been, it was now definitely lost to the race. In the end the Mi-Go drove the Old Ones out of all the northern lands, though they were powerless to disturb those in the sea. Little by little the slow retreat of the elder race to their original antarctic habitat was beginning.

It was curious to note from the pictured battles that both the Cthulhu spawn and the Mi-Go seem to have been composed of matter more widely different from that which we know than was the substance of the Old Ones. They were able to undergo transformations and reintegrations impossible for their adversaries, and seem

therefore to have originally come from even remoter gulfs of the cosmic space. The Old Ones, but for their abnormal toughness and peculiar vital properties, were strictly material, and must have had their absolute origin within the known space-time continuum—whereas the first sources of the other beings can only be guessed at with bated breath. All this, of course, assuming that the non-terrestrial linkages and the anomalies ascribed to the invading foes are not pure mythology. Conceivably, the Old Ones might have invented a cosmic framework to account for their occasional defeats, since historical interest and pride obviously formed their chief psychological element. It is significant that their annals failed to mention many advanced and potent races of beings whose mighty cultures and towering cities figure persistently in certain obscure legends.

The changing state of the world through long geologic ages appeared with startling vividness in many of the sculptured maps and scenes. In certain cases existing science will require revision, while in other cases its bold deductions are magnificently confirmed. As I have said, the hypothesis of Taylor, Wegener, and Joly that all the continents are fragments of an original antarctic land mass which cracked from centrifugal force and drifted apart over a technically viscous lower surface—an hypothesis suggested by such things

as the complementary outlines of Africa and South America, and the way the great mountain chains are rolled and shoved up—receives striking support from this uncanny source.

Maps evidently showing the Carboniferous world of an hundred million or more years ago displayed significant rifts and chasms destined later to separate Africa from the once continuous realms of Europe (then the Valusia of primal legend), Asia, the Americas, and the antarctic continent. Other charts—and most significantly one in connection with the founding fifty million years ago of the vast dead city around us—showed all the present continents well differentiated. And in the latest discoverable specimen—dating perhaps from the Pliocene Age—the approximate world of today appeared quite clearly despite the linkage of Alaska with Siberia, of North America with Europe through Greenland, and of South America with the antarctic continent through Graham Land. In the Carboniferous map the whole globe—ocean floor and rifted land mass alike—bore symbols of the Old Ones' vast stone cities, but in the later charts the gradual recession toward the antarctic became very plain. The final Pliocene specimen showed no land cities except on the antarctic continent and the tip of South America, nor any ocean cities north of the fiftieth parallel of South Latitude. Knowledge and interest in

the northern world, save for a study of coast-lines probably made during long exploration flights on those fan-like membranous wings, had evidently declined to zero among the Old Ones.

Destruction of cities through the upthrust of mountains, the centrifugal rending of continents, the seismic convulsions of land or sea-bottom, and other natural causes, was a matter of common record; and it was curious to observe how fewer and fewer replacements were made as the ages wore on. The vast dead megalopolis that yawned around us seemed to be the last general center of the race—built early in the Cretaceous Age after a titanic earth-buckling had obliterated a still vaster predecessor not far distant. It appeared that this general region was the most sacred spot of all, where reputedly the first Old Ones had settled on a primal sea-bottom. In the new city—many of whose features we could recognize in the sculptures, but which stretched fully a hundred miles along the mountain range in each direction beyond the farthest limits of our aerial survey—there were reputed to be preserved certain sacred stones forming part of the first sea-bottom city, which thrust up to light after long epochs in the course of the general crumbling of strata.

VIII.

Naturally, Danforth and I studied with especial interest and a peculiarly personal sense of awe everything pertaining to the immediate district in which we were. Of this local material there was naturally a vast abundance; and on the tangled ground level of the city we were lucky enough to find a house of very late date whose walls, though somewhat damaged by a neighboring rift, contained sculptures of decadent workmanship carrying the story of the region much beyond the period of the Pliocene map whence we derived our last general glimpse of the pre-human world. This was the last place we examined in detail, since what we found there gave us a fresh immediate objective.

Certainly, we were in one of the strangest, weirdest, and most terrible of all the corners of earth's globe. Of all existing lands, it was infinitely the most ancient. The conviction grew upon us that this hideous upland must indeed be the fabled nightmare plateau of Leng which even the mad author of the *Necronomicon* was reluctant to discuss. The great mountain chain was tremendously long—starting as a low range at Luitpold Land on the east coast of Weddell Sea and virtually crossing the entire continent. That really high part stretched in a mighty arc from about Latitude 82°,

E. Longitude 60° to Latitude 70°, E. Longitude 115°, with its concave side toward our camp and its seaward end in the region of that long, ice-locked coast whose hills were glimpsed by Wilkes and Mawson at the antarctic circle.

Yet even more monstrous exaggerations of nature seemed disturbingly close at hand. I have said that these peaks are higher than the Himalayas, but the sculptures forbid me to say that they are earth's highest. That grim honor is beyond doubt reserved for something which half the sculptures hesitated to record at all, whilst others approached it with obvious repugnance and trepidation. It seems that there was one part of the ancient land—the first part that ever rose from the waters after the earth had flung off the moon and the Old Ones had seeped down, from the stars—which had come to be shunned as vaguely and namelessly evil. Cities built there had crumbled before their time, and had been found suddenly deserted. Then when the first great earth buckling had convulsed the region in the Comanchian Age, a frightful line of peaks had shot suddenly up amidst the most appalling din and chaos—and earth had received her loftiest and most terrible mountains.

If the scale of the carvings was correct, these abhorred things must have been much over forty thousand feet high—radically vaster than even the shocking mountains of madness

we had crossed. They extended, it appeared, from about Latitude 77°, E. Longitude 70° to Latitude 70°, E. Longitude 100°—less than three hundred miles away from the dead city, so that we would have spied their dreaded summits in the dim western distance had it not been for that vague, opalescent haze. Their northern end must likewise be visible from the long antarctic circle coast line at Queen Mary Land.

Some of the Old Ones, in the decadent days, had made strange prayers to those mountains—but none ever went near them or dared to guess what lay beyond. No human eye had ever seen them, and as I studied the emotions conveyed in the carvings, I prayed that none ever might. There are protecting hills along the coast beyond them—Queen Mary and Kaiser Wilhelm Lands—and I thank Heaven no one has been able to land and climb those hills. I am not as sceptical about old tales and fears as I used to be, and I do not laugh now at the pre-human sculptor's notion that lightning paused meaningfully now and then at each of the brooding crests, and that an unexplained glow shone from one of those terrible pinnacles all through the long polar night. There may be a very real and very monstrous meaning in the old Pnakotic whispers about Kadath in the Cold Waste.

But the terrain close at hand was hardly less strange, even if less namelessly accursed. Soon after the

founding of the city the great mountain range became the seat of the principal temples, and many carvings showed what grotesque and fantastic towers had pierced the sky where now we saw only the curiously clinging cubes and ramparts. In the course of ages the caves had appeared, and had been shaped into adjuncts of the temples. With the advance of still later epochs, all the limestone veins of the region were hollowed out by ground waters, so that the mountains, the foothills, and the plains below them were a veritable network of connected caverns and galleries. Many graphic sculptures told of explorations deep underground, and of the final discovery of the Stygian sunless sea that lurked at earth's bowels.

This vast nighted gulf had undoubtedly been worn by the great river which flowed down from the nameless and horrible westward mountains, and which had formerly turned at the base of the Old Ones' range and flowed beside that chain into the Indian Ocean between Budd and Totten Lands on Wilkes's coast line. Little by little it had eaten away the limestone hill base at its turning, till at last its sapping currents reached the caverns of the ground waters and joined with them in digging a deeper abyss. Finally its whole bulk emptied into the hollow hills and left the old bed toward the ocean dry. Much of the later city as we now found it had been built over that former bed. The Old Ones,

understanding what had happened, and exercising their always keen artistic sense, had carved into ornate pylons those headlands of the foothills where the great stream began its descent into eternal darkness.

This river, once crossed by scores of noble stone bridges, was plainly the one whose extinct course we had seen in our aeroplane survey. Its position in different carvings of the city helped us to orient ourselves to the scene as it had been at various stages of the region's age-long, aeon-dead history, so that we were able to sketch a hasty but careful map of the salient features—squares, important buildings, and the like—for guidance in further explorations. We could soon reconstruct in fancy the whole stupendous thing as it was a million or ten million or fifty million years ago, for the sculptures told us exactly what the buildings and mountains and squares and suburbs and landscape setting and luxuriant Tertiary vegetation had looked like. It must have had a marvelous and mystic beauty, and as I thought of it, I almost forgot the clammy sense of sinister oppression with which the city's inhuman age and massiveness and deadness and remoteness and glacial twilight had choked and weighed on my spirit. Yet according to certain carvings, the denizens of that city had themselves known the clutch of oppressive terror; for there was a somber and recurrent type of scene in which the Old Ones were shown in the act of recoiling

affrightedly from some object—never allowed to appear in the design—found in the great river and indicated as having been washed down through waving, vine-draped cycad forests from those horrible westward mountains.

It was only in the one late-built house with the decadent carvings that we obtained any foreshadowing of the final calamity leading to the city's desertion. Undoubtedly there must have been many sculptures of the same age elsewhere, even allowing for the slackened energies and aspirations of a stressful and uncertain period; indeed, very certain evidence of the existence of others came to us shortly afterward. But this was the first and only set we directly encountered. We meant to look farther later on; but as I have said, immediate conditions dictated another present objective. There would, though, have been a limit—for after all hope of a long future occupancy of the place had perished among the Old Ones, there could not but have been a complete cessation of mural decoration. The ultimate blow, of course, was the coming of the great cold which once held most of the earth in thrall, and which has never departed from the ill-fated poles—the great cold that, at the world's other extremity, put an end to the fabled lands of Lomar and Hyperborea.

Just when this tendency began in the antarctic, it would be hard to say in terms of exact years. Nowadays

we set the beginning of the general glacial periods at a distance of about five hundred thousand years from the present, but at the poles the terrible scourge must have commenced much earlier. All quantitative estimates are partly guesswork, but it is quite likely that the decadent sculptures were made considerably less than a million years ago, and that the actual desertion of the city was complete long before the conventional opening of the Pleistocene—five hundred thousand years ago—as reckoned in terms of the earth's whole surface.

In the decadent sculptures there were signs of thinner vegetation everywhere, and of a decreased country life on the part of the Old Ones. Heating devices were shown in the houses, and winter travelers were represented as muffled in protective fabrics. Then we saw a series of cartouches—the continuous band arrangement being frequently interrupted in these late carvings—depicting a constantly growing migration to the nearest refuges of greater warmth—some fleeing to cities under the sea off the far-away coast, and some clambering down through networks of limestone caverns in the hollow hills to the neighboring black abyss of subterranean waters.

In the end it seems to have been the neighboring abyss which received the greatest colonization. This was partly due, no doubt, to the traditional sacredness of this special

region, but may have been more conclusively determined by the opportunities it gave for continuing the use of the great temples on the honeycombed mountains, and for retaining the vast land city as a place of summer residence and base of communication with various mines. The linkage of old and new abodes was made more effective by means of several gradings and improvements along the connecting routes, including the chiseling of numerous direct tunnels from the ancient metropolis to the black abyss—sharply down-pointing tunnels whose mouths we carefully drew, according to our most thoughtful estimates, on the guide map we were compiling. It was obvious that at least two of these tunnels lay within a reasonable exploring distance of where we were—both being on the mountainward edge of the city, one less than a quarter of a mile toward the ancient river-course, and the other perhaps twice that distance in the opposite direction.

The abyss, it seems, had shelving shores of dry land at certain places, but the Old Ones built their new city under water—no doubt because of its greater certainty of uniform warmth. The depth of the hidden sea appears to have been very great, so that the earth's internal heat could ensure its habitability for an indefinite period. The beings seemed to have had no trouble in adapting themselves to part-time—and eventually, of course, whole-time—

residence under water, since they had never allowed their gill systems to atrophy. There were many sculptures which showed how they had always frequently visited their submarine kinsfolk elsewhere, and how they had habitually bathed on the deep bottom of their great river. The darkness of inner earth could likewise have been no deterrent to a race accustomed to long antarctic nights.

Decadent though their style undoubtedly was, these latest carvings had a truly epic quality where they told of the building of the new city in the cavern sea. The Old Ones had gone about it scientifically—quarrying insoluble rocks from the heart of the honeycombed mountains, and employing expert workers from the nearest submarine city to perform the construction according to the best methods. These workers brought with them all that was necessary to establish the new venture—Shoggoth tissue from which to breed stone lifters and subsequent beasts of burden for the cavern city, and other protoplasmic matter to mold into phosphorescent organisms for lighting purposes.

At last a mighty metropolis rose on the bottom of that Stygian sea, its architecture much like that of the city above, and its workmanship displaying relatively little decadence because of the precise mathematical element inherent in building operations. The newly bred Shoggoths grew to enormous size and singular intelligence, and were represented

as taking and executing orders with marvelous quickness. They seemed to converse with the Old Ones by mimicking their voices—a sort of musical piping over a wide range, if poor Lake's dissection had indicated aright—and to work more from spoken commands than from hypnotic suggestions as in earlier times. They were, however, kept in admirable control. The phosphorescent organisms supplied light with vast effectiveness, and doubtless atoned for the loss of the familiar polar auroras of the outer-world night.

Art and decoration were pursued, though of course with a certain decadence. The Old Ones seemed to realize this falling off themselves, and in many cases anticipated the policy of Constantine the Great by transplanting especially fine blocks of ancient carving from their land city, just as the emperor, in a similar age of decline, stripped Greece and Asia of their finest art to give his new Byzantine capital greater splendors than its own people could create. That the transfer of sculptured blocks had not been more extensive was doubtless owing to the fact that the land city was not at first wholly abandoned. By the time total abandonment did occur—and it surely must have occurred before the polar Pleistocene was far advanced—the Old Ones had perhaps become satisfied with their decadent art—or had ceased to recognize the superior merit of the older carvings. At any

rate, the aeon-silent ruins around us had certainly undergone no wholesale sculptural denudation, though all the best separate statues, like other movables, had been taken away.

The decadent cartouches and dadoes telling this story were, as I have said, the latest we could find in our limited search. They left us with a picture of the Old Ones shuttling back and forth betwixt the land city in summer and the sea-cavern city in winter, and sometimes trading with the sea-bottom cities off the antarctic coast. By this time the ultimate doom of the land city must have been recognized, for the sculptures showed many signs of the cold's malign encroachments. Vegetation was declining, and the terrible snows of the winter no longer melted completely even in midsummer. The saurian livestock were nearly all dead, and the mammals were standing it none too well. To keep on with the work of the upper world it had become necessary to adapt some of the amorphous and curiously cold-resistant Shoggoths to land life—a thing the Old Ones had formerly been reluctant to do. The great river was now lifeless, and the upper sea had lost most of its denizens except the seals and whales. All the birds had flown away, save only the great, grotesque penguins.

What had happened afterward we could only guess. How long had the new sea-cavern city survived? Was it still down there, a stony corpse in eternal blackness? Had the

subterranean waters frozen at last? To what fate had the ocean-bottom cities of the outer world been delivered? Had any of the Old Ones shifted north ahead of the creeping ice cap? Existing geology shows no trace of their presence. Had the frightful Mi-Go been still a menace in the outer land world of the north? Could one be sure of what might or might not linger, even to this day, in the lightless and unplumbed abysses of earth's deepest waters? Those things had seemingly been able to withstand any amount of pressure—and men of the sea have fished up curious objects at times. And has the killer-whale theory really explained the savage and mysterious scars on antarctic seals noticed a generation ago by Borchgrevink?

The specimens found by poor Lake did not enter into these guesses, for their geologic setting proved them to have lived at what must have been a very early date in the land city's history. They were, according to their location, certainly not less than thirty million years old, and we reflected that in their day the sea-cavern city, and indeed the cavern itself, had had no existence. They would have remembered an older scene, with lush Tertiary vegetation everywhere, a younger land city of flourishing arts around them, and a great river sweeping northward along the base of the mighty mountains toward a far-away tropic ocean.

And yet we could not help thinking about these

specimens—especially about the eight perfect ones that were missing from Lake's hideously ravaged camp. There was something abnormal about that whole business—the strange things we had tried so hard to lay to somebody's madness—those frightful graves—the amount and nature of the missing material—Gedney—the unearthly toughness of those archaic monstrosities, and the queer vital freaks the sculptures now showed the race to have—Danforth and I had seen a good deal in the last few hours, and were prepared to believe and keep silent about many appalling and incredible secrets of primal nature.

IX.

I have said that our study of the decadent sculptures brought about a change in our immediate objective. This, of course, had to do with the chiseled avenues to the black inner world, of whose existence we had not known before, but which we were now eager to find and traverse. From the evident scale of the carvings we deduced that a steeply descending walk of about a mile through either of the neighboring tunnels would bring us to the brink of the dizzy, sunless cliffs above the great abyss; down whose sides paths, improved by the Old Ones, led to the rocky shore of the hidden and nighted ocean. To behold this fabulous gulf in stark reality was a lure which seemed

impossible of resistance once we knew of the thing—yet we realized we must begin the quest at once if we expected to include it in our present trip.

It was now 8 p.m., and we did not have enough battery replacements to let our torches burn on forever. We had done so much studying and copying below the glacial level that our battery supply had had at least five hours of nearly continuous use, and despite the special dry cell formula, would obviously be good for only about four more—though by keeping one torch unused, except for especially interesting or difficult places, we might manage to eke out a safe margin beyond that. It would not do to be without a light in these Cyclopean catacombs, hence in order to make the abyss trip we must give up all further mural deciphering. Of course we intended to revisit the place for days and perhaps weeks of intensive study and photography—curiosity having long ago got the better of horror—but just now we must hasten. Our supply of trail-blazing paper was far from unlimited, and we were reluctant to sacrifice spare notebooks or sketching paper to augment it, but we did let one large notebook go. If worse came to worst we could resort to rock-chipping—and of course it would be possible, even in case of really lost direction, to work up to full daylight by one channel or another if granted sufficient time for plentiful trial and error.

So at last we set off eagerly in the indicated direction of the nearest tunnel.

According to the carvings from which we had made our map, the desired tunnel-mouth could not be much more than a quarter of a mile from where we stood; the intervening space showing solid-looking buildings quite likely to be penetrable still at a sub-glacial level. The opening itself would be in the basement—on the angle nearest the foothills—of a vast five-pointed structure of evidently public and perhaps ceremonial nature, which we tried to identify from our aerial survey of the ruins. No such structure came to our minds as we recalled our flight, hence we concluded that its upper parts had been greatly damaged, or that it had been totally shattered in an ice rift we had noticed. In the latter case the tunnel would probably turn out to be choked, so that we would have to try the next nearest one—the one less than a mile to the north. The intervening river course prevented our trying any of the more southern tunnels on this trip; and indeed, if both of the neighboring ones were choked it was doubtful whether our batteries would warrant an attempt on the next northerly one—about a mile beyond our second choice.

As we threaded our dim way through the labyrinth with the aid of map and compass—traversing rooms and corridors in every stage of ruin or preservation, clambering

up ramps, crossing upper floors and bridges and clambering down again, encountering choked doorways and piles of debris, hastening now and then along finely preserved and uncannily immaculate stretches, taking false leads and retracing our way (in such cases removing the blind paper trail we had left), and once in a while striking the bottom of an open shaft through which daylight poured or trickled down—we were repeatedly tantalized by the sculptured walls along our route. Many must have told tales of immense historical importance, and only the prospect of later visits reconciled us to the need of passing them by. As it was, we slowed down once in a while and turned on our second torch. If we had had more films, we would certainly have paused briefly to photograph certain bas-reliefs, but time-consuming hand-copying was clearly out of the question.

I come now once more to a place where the temptation to hesitate, or to hint rather than state, is very strong. It is necessary, however, to reveal the rest in order to justify my course in discouraging further exploration. We had wormed our way very close to the computed site of the tunnel's mouth—having crossed a second-story bridge to what seemed plainly the tip of a pointed wall, and descended to a ruinous corridor especially rich in decadently elaborate and apparently ritualistic sculptures of late workmanship—when,

shortly before 8:30 p.m., Danforth's keen young nostrils gave us the first hint of something unusual. If we had had a dog with us, I suppose we would have been warned before. At first we could not precisely say what was wrong with the formerly crystal-pure air, but after a few seconds our memories reacted only too definitely. Let me try to state the thing without flinching. There was an odor—and that odor was vaguely, subtly, and unmistakably akin to what had nauseated us upon opening the insane grave of the horror poor Lake had dissected.

Of course the revelation was not as clearly cut at the time as it sounds now. There were several conceivable explanations, and we did a good deal of indecisive whispering. Most important of all, we did not retreat without further investigation; for having come this far, we were loath to be balked by anything short of certain disaster. Anyway, what we must have suspected was altogether too wild to believe. Such things did not happen in any normal world. It was probably sheer irrational instinct which made us dim our single torch—tempted no longer by the decadent and sinister sculptures that leered menacingly from the oppressive walls—and which softened our progress to a cautious tiptoeing and crawling over the increasingly littered floor and heaps of debris.

Danforth's eyes as well as nose proved better than mine, for it was likewise he who first noticed the

queer aspect of the debris after we had passed many half-choked arches leading to chambers and corridors on the ground level. It did not look quite as it ought after countless thousands of years of desertion, and when we cautiously turned on more light we saw that a kind of swath seemed to have been lately tracked through it. The irregular nature of the litter precluded any definite marks, but in the smoother places there were suggestions of the dragging of heavy objects. Once we thought there was a hint of parallel tracks as if of runners. This was what made us pause again.

It was during that pause that we caught—simultaneously this time—the other odor ahead. Paradoxically, it was both a less frightful and more frightful odor—less frightful intrinsically, but infinitely appalling in this place under the known circumstances—unless, of course, Gedney—for the odor was the plain and familiar one of common petrol—every-day gasoline.

Our motivation after that is something I will leave to psychologists. We knew now that some terrible extension of the camp horrors must have crawled into this nighted burial place of the aeons, hence could not doubt any longer the existence of nameless conditions—present or at least recent—just ahead. Yet in the end we did let sheer burning curiosity—or anxiety—or autohypnotism—or vague thoughts of responsibility

toward Gedney—or what not—drive us on. Danforth whispered again of the print he thought he had seen at the alley-turning in the ruins above; and of the faint musical piping—potentially of tremendous significance in the light of Lake's dissection report, despite its close resemblance to the cave-mouth echoes of the windy peaks—which he thought he had shortly afterward half heard from unknown depths below. I, in my turn, whispered of how the camp was left—of what had disappeared, and of how the madness of a lone survivor might have conceived the inconceivable—a wild trip across the monstrous mountains and a descent into the unknown, primal masonry—But we could not convince each other, or even ourselves, of anything definite. We had turned off all light as we stood still, and vaguely noticed that a trace of deeply filtered upper day kept the blackness from being absolute. Having automatically begun to move ahead, we guided ourselves by occasional flashes from our torch. The disturbed debris formed an impression we could not shake off, and the smell of gasoline grew stronger. More and more ruin met our eyes and hampered our feet, until very soon we saw that the forward way was about to cease. We had been all too correct in our pessimistic guess about that rift glimpsed from the air. Our tunnel quest was a blind one, and we were not even going to be able to reach the basement out of

which the abyssward aperture opened.

The torch, flashing over the grotesquely carved walls of the blocked corridor in which we stood, showed several doorways in various states of obstruction; and from one of them the gasoline odor—quite submerging that other hint of odor—came with especial distinctness. As we looked more steadily, we saw that beyond a doubt there had been a slight and recent clearing away of debris from that particular opening. Whatever the lurking horror might be, we believed the direct avenue toward it was now plainly manifest. I do not think anyone will wonder that we waited an appreciable time before making any further motion.

And yet, when we did venture inside that black arch, our first impression was one of anticlimax. For amidst the littered expanse of that sculptured Crypt—a perfect cube with sides of about twenty feet—there remained no recent object of instantly discernible size; so that we looked instinctively, though in vain, for a farther doorway. In another moment, however, Danforth's sharp vision had descried a place where the floor debris had been disturbed; and we turned on both torches full strength. Though what we saw in that light was actually simple and trifling, I am none the less reluctant to tell of it because of what it implied. It was a rough leveling of the debris, upon which

several small objects lay carelessly scattered, and at one corner of which a considerable amount of gasoline must have been spilled lately enough to leave a strong odor even at this extreme superplateau altitude. In other words, it could not be other than a sort of camp—a camp made by questing beings who, like us, had been turned back by the unexpectedly choked way to the abyss.

Let me be plain. The scattered objects were, so far as substance was concerned, all from Lake's camp; and consisted of tin cans as queerly opened as those we had seen at that ravaged place, many spent matches, three illustrated books more or less curiously smudged, an empty ink bottle with its pictorial and instructional carton, a broken fountain pen, some oddly snipped fragments of fur and tent-cloth, a used electric battery with circular of directions, a folder that came with our type of tent heater, and a sprinkling of crumpled papers. It was all bad enough but when we smoothed out the papers and looked at what was on them, we felt we had come to the worst. We had found certain inexplicably blotted papers at the camp which might have prepared us, yet the effect of the sight down there in the pre-human vaults of a nightmare city was almost too much to bear.

A mad Gedney might have made the groups of dots in imitation of those found on the greenish soapstones, just as the dots on those insane five-pointed grave-mounds

might have been made; and he might conceivably have prepared rough, hasty sketches—varying in their accuracy or lack of it—which outlined the neighboring parts of the city and traced the way from a circularly represented place outside our previous route—a place we identified as a great cylindrical tower in the carvings and as a vast circular gulf glimpsed in our aerial survey—to the present five-pointed structure and the tunnel-mouth therein. He might, I repeat, have prepared such sketches; for those before us were quite obviously compiled, as our own had been, from late sculptures somewhere in the glacial labyrinth, though not from the ones which we had seen and used. But what that art-blind bungler could never have done was to execute those sketches in a strange and assured technique perhaps superior, despite haste and carelessness, to any of the decadent carvings from which they were taken—the characteristic and unmistakable technique of the Old Ones themselves in the dead city's heyday.

There are those who will say Danforth and I were utterly mad not to flee for our lives after that; since our conclusions were now—notwithstanding their wildness—completely fixed, and of a nature I need not even mention to those who have read my account as far as this. Perhaps we were mad—for have I not said those horrible peaks were mountains of madness? But I think I can detect something of the same spirit—albeit

in a less extreme form—in the men who stalk deadly beasts through African jungles to photograph them or study their habits. Half-paralyzed with terror though we were, there was nevertheless fanned within us a blazing flame of awe and curiosity which triumphed in the end.

Of course we did not mean to face that—or those—which we knew had been there, but we felt that they must be gone by now. They would by this time have found the other neighboring entrance to the abyss, and have passed within, to whatever night-black fragments of the past might await them in the ultimate gulf—the ultimate gulf they had never seen. Or if that entrance, too, was blocked, they would have gone on to the north seeking another. They were, we remembered, partly independent of light.

Looking back to that moment, I can scarcely recall just what precise form our new emotions took—just what change of immediate objective it was that so sharpened our sense of expectancy. We certainly did not mean to face what we feared—yet I will not deny that we may have had a lurking, unconscious wish to spy certain things from some hidden vantage point. Probably we had not given up our zeal to glimpse the abyss itself, though there was interposed a new goal in the form of that great circular place shown on the crumpled sketches we had found. We had at once recognized it as a monstrous cylindrical tower figuring

in the very earliest carvings, but appearing only as a prodigious round aperture from above. Something about the impressiveness of its rendering, even in these hasty diagrams, made us think that its sub-glacial levels must still form a feature of peculiar importance. Perhaps it embodied architectural marvels as yet unencountered by us. It was certainly of incredible age according to the sculptures in which it figured—being indeed among the first things built in the city. Its carvings, if preserved, could not but be highly significant. Moreover, it might form a good present link with the upper world—a shorter route than the one we were so carefully blazing, and probably that by which those others had descended.

At any rate, the thing we did was to study the terrible sketches—which quite perfectly confirmed our own—and start back over the indicated course to the circular place; the course which our nameless predecessors must have traversed twice before us. The other neighboring gate to the abyss would lie beyond that. I need not speak of our journey—during which we continued to leave an economical trail of paper—for it was precisely the same in kind as that by which we had reached the cul-de-sac; except that it tended to adhere more closely to the ground level and even descend to basement corridors. Every now and then we could trace certain disturbing marks in the debris or

litter under-foot; and after we had passed outside the radius of the gasoline scent, we were again faintly conscious—spasmodically—of that more hideous and more persistent scent. After the way had branched from our former course, we sometimes gave the rays of our single torch a furtive sweep along the walls; noting in almost every case the well-nigh omnipresent sculptures, which indeed seem to have formed a main aesthetic outlet for the Old Ones.

About 9:30 p.m., while traversing a long, vaulted corridor whose increasingly glaciated floor seemed somewhat below the ground level and whose roof grew lower as we advanced, we began to see strong daylight ahead and were able to turn off our torch. It appeared that we were coming to the vast circular place, and that our distance from the upper air could not be very great. The corridor ended in an arch surprisingly low for these megalithic ruins, but we could see much through it even before we emerged. Beyond there stretched a prodigious round space—fully two hundred feet in diameter—strewn with debris and containing many choked archways corresponding to the one we were about to cross. The walls were—in available spaces—boldly sculptured into a spiral band of heroic proportions; and displayed, despite the destructive weathering caused by the openness of the spot, an artistic splendor far beyond anything we had encountered before. The littered

floor was quite heavily glaciated, and we fancied that the true bottom lay at a considerably lower depth.

But the salient object of the place was the titanic stone ramp which, eluding the archways by a sharp turn outward into the open floor, wound spirally up the stupendous cylindrical wall like an inside counterpart of those once climbing outside the monstrous towers or ziggurats of antique Babylon. Only the rapidity of our flight, and the perspective which confounded the descent with the tower's inner wall, had prevented our noticing this feature from the air, and thus caused us to seek another avenue to the sub-glacial level. Pabodie might have been able to tell what sort of engineering held it in place, but Danforth and I could merely admire and marvel. We could see mighty stone corbels and pillars here and there, but what we saw seemed inadequate to the function performed. The thing was excellently preserved up to the present top of the tower—a highly remarkable circumstance in view of its exposure—and its shelter had done much to protect the bizarre and disturbing cosmic sculptures on the walls.

As we stepped out into the awesome half-daylight of this monstrous cylinder-bottom—fifty million years old, and without doubt the most primally ancient structure ever to meet our eyes—we saw that the ramp-traversed sides stretched dizzily up to a height of fully sixty

feet. This, we recalled from our aerial survey, meant an outside glaciation of some forty feet; since the yawning gulf we had seen from the plane had been at the top of an approximately twenty-foot mound of crumbled masonry, somewhat sheltered for three-fourths of its circumference by the massive curving walls of a line of higher ruins. According to the sculptures, the original tower had stood in the center of an immense circular plaza, and had been perhaps five hundred or six hundred feet high, with tiers of horizontal disks near the top, and a row of needle-like spires along the upper rim. Most of the masonry had obviously toppled outward rather than inward—a fortunate happening, since otherwise the ramp might have been shattered and the whole interior choked. As it was, the ramp showed sad battering; whilst the choking was such that all the archways at the bottom seemed to have been recently cleared.

It took us only a moment to conclude that this was indeed the route by which those others had descended, and that this would be the logical route for our own ascent despite the long trail of paper we had left elsewhere. The tower's mouth was no farther from the foothills and our waiting plane than was the great terraced building we had entered, and any further sub-glacial exploration we might make on this trip would lie in this general region. Oddly, we were still thinking about

possible later trips—even after all we had seen and guessed. Then, as we picked our way cautiously over the debris of the great floor, there came a sight which for the time excluded all other matters.

It was the neatly huddled array of three sledges in that farther angle of the ramp's lower and outward-projecting course which had hitherto been screened from our view. There they were—the three sledges missing from Lake's camp—shaken by a hard usage which must have included forcible dragging along great reaches of snowless masonry and debris, as well as much hand portage over utterly unnavigable places. They were carefully and intelligently packed and strapped, and contained things memorably familiar enough: the gasoline stove, fuel cans, instrument cases, provision tins, tarpaulins obviously bulging with books, and some bulging with less obvious contents—everything derived from Lake's equipment.

After what we had found in that other room, we were in a measure prepared for this encounter. The really great shock came when we stepped over and undid one tarpaulin whose outlines had peculiarly disquieted us. It seems that others as well as Lake had been interested in collecting typical specimens; for there were two here, both stiffly frozen, perfectly preserved, patched with adhesive plaster where some wounds around the neck had occurred, and wrapped with care to

prevent further damage. They were the bodies of young Gedney and the missing dog.

X.

Many people will probably judge us callous as well as mad for thinking about the northward tunnel and the abyss so soon after our somber discovery, and I am not prepared to say that we would have immediately revived such thoughts but for a specific circumstance which broke in upon us and set up a whole new train of speculations. We had replaced the tarpaulin over poor Gedney and were standing in a kind of mute bewilderment when the sounds finally reached our consciousness—the first sounds we had heard since descending out of the open where the mountain wind whined faintly from its unearthly heights. Well known and mundane though they were, their presence in this remote world of death was more unexpected and unnerving than any grotesque or fabulous tones could possibly have been—since they gave a fresh upsetting to all our notions of cosmic harmony.

Had it been some trace of that bizarre musical piping over a wide range which Lake's dissection report had led us to expect in those others—and which, indeed, our overwrought fancies had been reading into every wind howl we had heard since coming on the camp horror—it

would have had a kind of hellish congruity with the aeon-dead region around us. A voice from other epochs belongs in a graveyard of other epochs. As it was, however, the noise shattered all our profoundly seated adjustments—all our tacit acceptance of the inner antarctic as a waste utterly and irrevocably void of every vestige of normal life. What we heard was not the fabulous note of any buried blasphemy of elder earth from whose supernal toughness an age-denied polar sun had evoked a monstrous response. Instead, it was a thing so mockingly normal and so unerringly familiarized by our sea days off Victoria Land and our camp days at McMurdo Sound that we shuddered to think of it here, where such things ought not to be. To be brief—it was simply the raucous squawking of a penguin.

The muffled sound floated from sub-glacial recesses nearly opposite to the corridor whence we had come—regions manifestly in the direction of that other tunnel to the vast abyss. The presence of a living water-bird in such a direction—in a world whose surface was one of age-long and uniform lifelessness—could lead to only one conclusion; hence our first thought was to verify the objective reality of the sound. It was, indeed, repeated, and seemed at times to come from more than one throat. Seeking its source, we entered an archway from which much debris had been cleared; resuming our trail-blazing—with an

added paper-supply taken with curious repugnance from one of the tarpaulin bundles on the sledges—when we left daylight behind.

As the glaciated floor gave place to a litter of detritus, we plainly discerned some curious, dragging tracks; and once Danforth found a distinct print of a sort whose description would be only too superfluous. The course indicated by the penguin cries was precisely what our map and compass prescribed as an approach to the more northerly tunnel-mouth, and we were glad to find that a bridgeless thoroughfare on the ground and basement levels seemed open. The tunnel, according to the chart, ought to start from the basement of a large pyramidal structure which we seemed vaguely to recall from our aerial survey as remarkably well-preserved. Along our path the single torch showed a customary profusion of carvings, but we did not pause to examine any of these.

Suddenly a bulky white shape loomed up ahead of us, and we flashed on the second torch. It is odd how wholly this new quest had turned our minds from earlier fears of what might lurk near. Those other ones, having left their supplies in the great circular place, must have planned to return after their scouting trip toward or into the abyss; yet we had now discarded all caution concerning them as completely as if they had never existed. This white, waddling thing was fully six feet high, yet we seemed to realize at once

that it was not one of those others. They were larger and dark, and, according to the sculptures, their motion over land surfaces was a swift, assured matter despite the queerness of their sea-born tentacle equipment. But to say that the white thing did not profoundly frighten us would be vain. We were indeed clutched for an instant by a primitive dread almost sharper than the worst of our reasoned fears regarding those others. Then came a flash of anticlimax as the white shape sidled into a lateral archway to our left to join two others of its kind which had summoned it in raucous tones. For it was only a penguin—albeit of a huge, unknown species larger than the greatest of the known king penguins, and monstrous in its combined albinism and virtual eyelessness.

When we had followed the thing into the archway and turned both our torches on the indifferent and unheeding group of three, we saw that they were all eyeless albinos of the same unknown and gigantic species. Their size reminded us of some of the archaic penguins depicted in the Old Ones' sculptures, and it did not take us long to conclude that they were descended from the same stock—undoubtedly surviving through a retreat to some warmer inner region whose perpetual blackness had destroyed their pigmentation and atrophied their eyes to mere useless slits. That their present habitat was the vast abyss

we sought, was not for a moment to be doubted; and this evidence of the gulf's continued warmth and habitability filled us with the most curious and subtly perturbing fancies.

We wondered, too, what had caused these three birds to venture out of their usual domain. The state and silence of the great dead city made it clear that it had at no time been an habitual seasonal rookery, whilst the manifest indifference of the trio to our presence made it seem odd that any passing party of those others should have startled them. Was it possible that those others had taken some aggressive action or tried to increase their meat supply? We doubted whether that pungent odor which the dogs had hated could cause an equal antipathy in these penguins, since their ancestors had obviously lived on excellent terms with the Old Ones—an amicable relationship which must have survived in the abyss below as long as any of the Old Ones remained. Regretting—in a flare-up of the old spirit of pure science—that we could not photograph these anomalous creatures, we shortly left them to their squawking and pushed on toward the abyss whose openness was now so positively proved to us, and whose exact direction occasional penguin tracks made clear.

Not long afterward a steep descent in a long, low, doorless, and peculiarly sculptureless corridor led us to believe that we were approaching the tunnel-mouth at

last. We had passed two more penguins, and heard others immediately ahead. Then the corridor ended in a prodigious open space which made us gasp involuntarily—a perfect inverted hemisphere, obviously deep underground; fully a hundred feet in diameter and fifty feet high, with low archways opening around all parts of the circumference but one, and that one yawning cavernously with a black, arched aperture which broke the symmetry of the vault to a height of nearly fifteen feet. It was the entrance to the great abyss.

In this vast hemisphere, whose concave roof was impressively though decadently carved to a likeness of the primordial celestial dome, a few albino penguins waddled—aliens there, but indifferent and unseeing. The black tunnel yawned indefinitely off at a steep, descending grade, its aperture adorned with grotesquely chiseled jambs and lintel. From that cryptical mouth we fancied a current of slightly warmer air, and perhaps even a suspicion of vapor proceeded; and we wondered what living entities other than penguins the limitless void below, and the contiguous honeycombings of the land and the titan mountains, might conceal. We wondered, too, whether the trace of mountain-top smoke at first suspected by poor Lake, as well as the odd haze we had ourselves perceived around the rampart-crowned peak, might not be caused by the tortuous-channeled

rising of some such vapor from the unfathomed regions of earth's core.

Entering the tunnel, we saw that its outline was—at least at the start—about fifteen feet each way—sides, floor, and arched roof composed of the usual megalithic masonry. The sides were sparsely decorated with cartouches of conventional designs in a late, decadent style; and all the construction and carving were marvelously well-preserved. The floor was quite clear, except for a slight detritus bearing outgoing penguin tracks and the inward tracks of these others. The farther one advanced, the warmer it became; so that we were soon unbuttoning our heavy garments. We wondered whether there were any actually igneous manifestations below, and whether the waters of that sunless sea were hot. After a short distance the masonry gave place to solid rock, though the tunnel kept the same proportions and presented the same aspect of carved regularity. Occasionally its varying grade became so steep that grooves were cut in the floor. Several times we noted the mouths of small lateral galleries not recorded in our diagrams; none of them such as to complicate the problem of our return, and all of them welcome as possible refuges in case we met unwelcome entities on their way back from the abyss. The nameless scent of such things was very distinct. Doubtless it was suicidally foolish

to venture into that tunnel under the known conditions, but the lure of the unplumbed is stronger in certain persons than most suspect—indeed, it was just such a lure which had brought us to this unearthly polar waste in the first place. We saw several penguins as we passed along, and speculated on the distance we would have to traverse. The carvings had led us to expect a steep downhill walk of about a mile to the abyss, but our previous wanderings had shown us that matters of scale were not wholly to be depended on.

After about a quarter of a mile that nameless scent became greatly accentuated, and we kept very careful track of the various lateral openings we passed. There was no visible vapor as at the mouth, but this was doubtless due to the lack of contrasting cooler air. The temperature was rapidly ascending, and we were not surprised to come upon a careless heap of material shudderingly familiar to us. It was composed of furs and tent-cloth taken from Lake's camp, and we did not pause to study the bizarre forms into which the fabrics had been slashed. Slightly beyond this point we noticed a decided increase in the size and number of the side galleries, and concluded that the densely honeycombed region beneath the higher foothills must now have been reached. The nameless scent was now curiously mixed with another and scarcely less offensive odor—of what nature we could not guess,

though we thought of decaying organisms and perhaps unknown subterranean fungi. Then came a startling expansion of the tunnel for which the carvings had not prepared us—a broadening and rising into a lofty, natural-looking elliptical cavern with a level floor, some seventy-five feet long and fifty broad, and with many immense side passages leading away into cryptical darkness.

Though this cavern was natural in appearance, an inspection with both torches suggested that it had been formed by the artificial destruction of several walls between adjacent honeycombings. The walls were rough, and the high, vaulted roof was thick with stalactites; but the solid rock floor had been smoothed off, and was free from all debris, detritus, or even dust to a positively abnormal extent. Except for the avenue through which we had come, this was true of the floors of all the great galleries opening off from it; and the singularity of the condition was such as to set us vainly puzzling. The curious new fetor which had supplemented the nameless scent was excessively pungent here; so much so that it destroyed all trace of the other. Something about this whole place, with its polished and almost glistening floor, struck us as more vaguely baffling and horrible than any of the monstrous things we had previously encountered.

The regularity of the passage immediately ahead, as well as the

larger proportion of penguin-droppings there, prevented all confusion as to the right course amidst this plethora of equally great cave mouths. Nevertheless we resolved to resume our paper trailblazing if any further complexity should develop; for dust tracks, of course, could no longer be expected. Upon resuming our direct progress we cast a beam of torchlight over the tunnel walls—and stopped short in amazement at the supremely radical change which had come over the carvings in this part of the passage. We realized, of course, the great decadence of the Old Ones' sculpture at the time of the tunneling, and had indeed noticed the inferior workmanship of the arabesques in the stretches behind us. But now, in this deeper section beyond the cavern, there was a sudden difference wholly transcending explanation—a difference in basic nature as well as in mere quality, and involving so profound and calamitous a degradation of skill that nothing in the hitherto observed rate of decline could have led one to expect it.

This new and degenerate work was coarse, bold, and wholly lacking in delicacy of detail. It was counter-sunk with exaggerated depth in bands following the same general line as the sparse cartouches of the earlier sections, but the height of the reliefs did not reach the level of the general surface. Danforth had the idea that it was a second carving—a sort of palimpsest formed after the

obliteration of a previous design. In nature it was wholly decorative and conventional, and consisted of crude spirals and angles roughly following the quintile mathematical tradition of the Old Ones, yet seemingly more like a parody than a perpetuation of that tradition. We could not get it out of our minds that some subtly but profoundly alien element had been added to the aesthetic feeling behind the technique—an alien element, Danforth guessed, that was responsible for the laborious substitution. It was like, yet disturbingly unlike, what we had come to recognize as the Old Ones' art; and I was persistently reminded of such hybrid things as the ungainly Palmyrene sculptures fashioned in the Roman manner. That others had recently noticed this belt of carving was hinted by the presence of a used flashlight battery on the floor in front of one of the most characteristic cartouches.

Since we could not afford to spend any considerable time in study, we resumed our advance after a cursory look; though frequently casting beams over the walls to see if any further decorative changes developed. Nothing of the sort was perceived, though the carvings were in places rather sparse because of the numerous mouths of smooth-floored lateral tunnels. We saw and heard fewer penguins, but thought we caught a vague suspicion of an infinitely distant chorus of them somewhere deep within the earth.

The new and inexplicable odor was abominably strong, and we could detect scarcely a sign of that other nameless scent. Puffs of visible vapor ahead bespoke increasing contrasts in temperature, and the relative nearness of the sunless sea-cliffs of the great abyss. Then, quite unexpectedly, we saw certain obstructions on the polished floor ahead—obstructions which were quite definitely not penguins—and turned on our second torch after making sure that the objects were quite stationary.

XI.

Still another time have I come to a place where it is very difficult to proceed. I ought to be hardened by this stage; but there are some experiences and intimations which scar too deeply to permit of healing, and leave only such an added sensitiveness that memory reinspires all the original horror. We saw, as I have said, certain obstructions on the polished floor ahead; and I may add that our nostrils were assailed almost simultaneously by a very curious intensification of the strange prevailing fetor, now quite plainly mixed with the nameless stench of those others which had gone before. The light of the second torch left no doubt of what the obstructions were, and we dared approach them only because we could see, even from a distance, that they were quite as past all harming power as had been the six

similar specimens unearthed from the monstrous star-mounded graves at poor Lake's camp.

They were, indeed, as lacking in completeness as most of those we had unearthed—though it grew plain from the thick, dark-green pool gathering around them that their incompleteness was of infinitely greater recency. There seemed to be only four of them, whereas Lake's bulletins would have suggested no less than eight as forming the group which had preceded us. To find them in this state was wholly unexpected, and we wondered what sort of monstrous struggle had occurred down here in the dark.

Penguins, attacked in a body, retaliate savagely with their beaks, and our ears now made certain the existence of a rookery far beyond. Had those others disturbed such a place and aroused murderous pursuit? The obstructions did not suggest it, for penguins' beaks against the tough tissues Lake had dissected could hardly account for the terrible damage our approaching glance was beginning to make out. Besides, the huge blind birds we had seen appeared to be singularly peaceful.

Had there, then, been a struggle among those others, and were the absent four responsible? If so, where were they? Were they close at hand and likely to form an immediate menace to us? We glanced anxiously at some of the smooth-floored lateral passages as we continued our slow and frankly reluctant approach.

Whatever the conflict was, it had clearly been that which had frightened the penguins into their unaccustomed wandering. It must, then, have arisen near that faintly heard rookery in the incalculable gulf beyond, since there were no signs that any birds had normally dwelt here. Perhaps, we reflected, there had been a hideous running fight, with the weaker party seeking to get back to the cached sledges when their pursuers finished them. One could picture the demoniac fray between namelessly monstrous entities as it surged out of the black abyss with great clouds of frantic penguins squawking and scurrying ahead.

I say that we approached those sprawling and incomplete obstructions slowly and reluctantly. Would to Heaven we had never approached them at all, but had run back at top speed out of that blasphemous tunnel with the greasily smooth floors and the degenerate murals aping and mocking the things they had superseded—run back, before we had seen what we did see, and before our minds were burned with something which will never let us breathe easily again!

Both of our torches were turned on the prostrate objects, so that we soon realized the dominant factor in their incompleteness. Mauled, compressed, twisted, and ruptured as they were, their chief common injury was total decapitation. From each one the tentacled starfish-head had been removed; and as we drew

near we saw that the manner of removal looked more like some hellish tearing or suction than like any ordinary form of cleavage. Their noisome dark-green ichor formed a large, spreading pool; but its stench was half overshadowed by the newer and stranger stench, here more pungent than at any other point along our route. Only when we had come very close to the sprawling obstructions could we trace that second, unexplainable feter to any immediate source—and the instant we did so Danforth, remembering certain very vivid sculptures of the Old Ones' history in the Permian Age one hundred and fifty million years ago, gave vent to a nerve-tortured cry which echoed hysterically through that vaulted and archaic passage with the evil, palimpsest carvings.

I came only just short of echoing his cry myself; for I had seen those primal sculptures, too, and had shudderingly admired the way the nameless artist had suggested that hideous slime coating found on certain incomplete and prostrate Old Ones—those whom the frightful Shoggoths had characteristically slain and sucked to a ghastly headlessness in the great war of re-subjugation. They were infamous, nightmare sculptures even when telling of age-old, bygone things; for Shoggoths and their work ought not to be seen by human beings or portrayed by any beings. The mad author of the *Necronomicon* had

nervously tried to swear that none had been bred on this planet, and that only drugged dreamers had even conceived them. Formless protoplasm able to mock and reflect all forms and organs and processes—viscous agglutinations of bubbling cells—rubbery fifteen-foot spheroids infinitely plastic and ductile—slaves of suggestion, builders of cities—more and more sullen, more and more intelligent, more and more amphibious, more and more imitative! Great God! What madness made even those blasphemous Old Ones willing to use and carve such things?

And now, when Danforth and I saw the freshly glistening and reflectively iridescent black slime which clung thickly to those headless bodies and stank obscenely with that new, unknown odor whose cause only a diseased fancy could envisage—clung to those bodies and sparkled less voluminously on a smooth part of the accursedly resculptured wall in a series of grouped dots—we understood the quality of cosmic fear to its uttermost depths. It was not fear of those four missing others—for all too well did we suspect they would do no harm again. Poor devils! After all, they were not evil things of their kind. They were the men of another age and another order of being. Nature had played a hellish jest on them—as it will on any others that human madness, callousness, or cruelty may hereafter dig up in that hideously

dead or sleeping polar waste—and this was their tragic homecoming. They had not been even savages—for what indeed had they done? That awful awakening in the cold of an unknown epoch—perhaps an attack by the furry, frantically barking quadrupeds, and a dazed defense against them and the equally frantic white simians with the queer wrappings and paraphernalia... poor Lake, poor Gedney... and poor Old Ones! Scientists to the last—what had they done that we would not have done in their place? God, what intelligence and persistence! What a facing of the incredible, just as those carved kinsmen and forbears had faced things only a little less incredible! Radiates, vegetables, monstrosities, star-spawn—whatever they had been, they were men!

They had crossed the icy peaks on whose templed slopes they had once worshipped and roamed among the tree-ferns. They had found their dead city brooding under its curse, and had read its carved latter days as we had done. They had tried to reach their living fellows in fabled depths of blackness they had never seen—and what had they found? All this flashed in unison through the thoughts of Danforth and me as we looked from those headless, slime-coated shapes to the loathsome palimpsest sculptures and the diabolical dot-groups of fresh slime on the wall beside them—looked and understood what must have triumphed and survived down there

in the Cyclopean water-city of that nighted, penguin-fringed abyss, whence even now a sinister curling mist had begun to belch pallidly as if in answer to Danforth's hysterical scream.

The shock of recognizing that monstrous slime and headlessness had frozen us into mute, motionless statues, and it is only through later conversations that we have learned of the complete identity of our thoughts at that moment. It seemed aeons that we stood there, but actually it could not have been more than ten or fifteen seconds. That hateful, pallid mist curled forward as if veritably driven by some remoter advancing bulk—and then came a sound which upset much of what we had just decided, and in so doing broke the spell and enabled us to run like mad past squawking, confused penguins over our former trail back to the city, along ice-sunken megalithic corridors to the great open circle, and up that archaic spiral ramp in a frenzied, automatic plunge for the sane outer air and light of day.

The new sound, as I have intimated, upset much that we had decided; because it was what poor Lake's dissection had led us to attribute to those we had judged dead. It was, Danforth later told me, precisely what he had caught in infinitely muffled form when at that spot beyond the alley corner above the glacial level; and it certainly had a shocking resemblance to the wind-pipings we had both heard

around the lofty mountain caves. At the risk of seeming puerile I will add another thing, too, if only because of the surprising way Danforth's impressions chimed with mine. Of course common reading is what prepared us both to make the interpretation, though Danforth has hinted at queer notions about unsuspected and forbidden sources to which Poe may have had access when writing his *Arthur Gordon Pym* a century ago. It will be remembered that in that fantastic tale there is a word of unknown but terrible and prodigious significance connected with the antarctic and screamed eternally by the gigantic spectrally snowy birds of that malign region's core. "Tekeli-li! Tekeli-li!" That, I may admit, is exactly what we thought we heard conveyed by that sudden sound behind the advancing white mist—that insidious musical piping over a singularly wide range.

We were in full flight before three notes or syllables had been uttered, though we knew that the swiftness of the Old Ones would enable any scream-roused and pursuing survivor of the slaughter to overtake us in a moment if it really wished to do so. We had a vague hope, however, that non-aggressive conduct and a display of kindred reason might cause such a being to spare us in case of capture, if only from scientific curiosity. After all, if such an one had nothing to fear for itself, it would have no motive in harming us. Concealment being

futile at this juncture, we used our torch for a running glance behind, and perceived that the mist was thinning. Would we see, at last, a complete and living specimen of those others? Again came that insidious musical piping—"Tekeli-li! Tekeli-li!" Then, noting that we were actually gaining on our pursuer, it occurred to us that the entity might be wounded. We could take no chances, however, since it was very obviously approaching in answer to Danforth's scream, rather than in flight from any other entity. The timing was too close to admit of doubt. Of the whereabouts of that less conceivable and less mentionable nightmare—that fetid, unglimped mountain of slime-spewing protoplasm whose race had conquered the abyss and sent land pioneers to re-carve and squirm through the burrows of the hills—we could form no guess; and it cost us a genuine pang to leave this probably crippled Old One—perhaps a lone survivor—to the peril of recapture and a nameless fate.

Thank Heaven we did not slacken our run. The curling mist had thickened again, and was driving ahead with increased speed; whilst the straying penguins in our rear were squawking and screaming and displaying signs of a panic really surprising in view of their relatively minor confusion when we had passed them. Once more came that sinister, wide-ranged piping—"Tekeli-li! Tekeli-li!" We had been

wrong. The thing was not wounded, but had merely paused on encountering the bodies of its fallen kindred and the hellish slime inscription above them. We could never know what that demon message was—but those burials at Lake's camp had shown how much importance the beings attached to their dead. Our recklessly used torch now revealed ahead of us the large open cavern where various ways converged, and we were glad to be leaving those morbid palimpsest sculptures—almost felt even when scarcely seen—behind. Another thought which the advent of the cave inspired was the possibility of losing our pursuer at this bewildering focus of large galleries. There were several of the blind albino penguins in the open space, and it seemed clear that their fear of the oncoming entity was extreme to the point of unaccountability. If at that point we dimmed our torch to the very lowest limit of traveling need, keeping it strictly in front of us, the frightened squawking motions of the huge birds in the mist might muffle our footfalls, screen our true course, and somehow set up a false lead. Amidst the churning, spiraling fog, the littered and unglistering floor of the main tunnel beyond this point, as differing from the other morbidly polished burrows, could hardly form a highly distinguishing feature; even, so far as we could conjecture, for those indicated special senses which made the Old Ones partly, though imperfectly,

independent of light in emergencies. In fact, we were somewhat apprehensive lest we go astray ourselves in our haste. For we had, of course, decided to keep straight on toward the dead city; since the consequences of loss in those unknown foothill honeycombings would be unthinkable.

The fact that we survived and emerged is sufficient proof that the thing did take a wrong gallery whilst we providentially hit on the right one. The penguins alone could not have saved us, but in conjunction with the mist they seem to have done so. Only a benign fate kept the curling vapors thick enough at the right moment, for they were constantly shifting and threatening to vanish. Indeed, they did lift for a second just before we emerged from the nauseously re-sculptured tunnel into the cave; so that we actually caught one first and only half-glimpse of the oncoming entity as we cast a final, desperately fearful glance backward before dimming the torch and mixing with the penguins in the hope of dodging pursuit. If the fate which screened us was benign, that which gave us the half-glimpse was infinitely the opposite; for to that flash of semi-vision can be traced a full half of the horror which has ever since haunted us.

Our exact motive in looking back again was perhaps no more than the immemorial instinct of the pursued to gauge the nature and

course of its pursuer; or perhaps it was an automatic attempt to answer a subconscious question raised by one of our senses. In the midst of our flight, with all our faculties centered on the problem of escape, we were in no condition to observe and analyze details; yet even so, our latent brain cells must have wondered at the message brought them by our nostrils. Afterward we realized what it was—that our retreat from the fetid slime-coating on those headless obstructions, and the coincident approach of the pursuing entity, had not brought us the exchange of stench which logic called for. In the neighborhood of the prostrate things that new and lately unexplainable fetor had been wholly dominant; but by this time it ought to have largely given place to the nameless stench associated with those others. This it had not done—for instead, the newer and less bearable smell was now virtually undiluted, and growing more and more poisonously insistent each second.

So we glanced back—simultaneously, it would appear; though no doubt the incipient motion of one prompted the imitation of the other. As we did so we flashed both torches full strength at the momentarily thinned mist; either from sheer primitive anxiety to see all we could, or in a less primitive but equally unconscious effort to dazzle the entity before we dimmed our light and dodged among the penguins of the labyrinth-center ahead. Unhappy

act! Not Orpheus himself, or Lot's wife, paid much more dearly for a backward glance. And again came that shocking, wide-ranged piping—"Tekeli-li! Tekeli-li!"

I might as well be frank—even if I cannot bear to be quite direct—in stating what we saw; though at the time we felt that it was not to be admitted even to each other. The words reaching the reader can never even suggest the awfulness of the sight itself. It crippled our consciousness so completely that I wonder we had the residual sense to dim our torches as planned, and to strike the right tunnel toward the dead city. Instinct alone must have carried us through—perhaps better than reason could have done; though if that was what saved us, we paid a high price. Of reason we certainly had little enough left.

Danforth was totally unstrung, and the first thing I remember of the rest of the journey was hearing him lightheadedly chant an hysterical formula in which I alone of mankind could have found anything but insane irrelevance. It reverberated in falsetto echoes among the squawks of the penguins; reverberated through the vaultings ahead, and—thank God—through the now empty vaultings behind. He could not have begun it at once—else we would not have been alive and blindly racing. I shudder to think of what a shade of difference in his nervous reactions might have brought.

"South Station Under—Washington Under—Park Street Under—Kendall—Central—Harvard...." The poor fellow was chanting the familiar stations of the Boston-Cambridge tunnel that burrowed through our peaceful native soil thousands of miles away in New England, yet to me the ritual had neither irrelevance nor home-feeling. It had only horror, because I knew unerringly the monstrous, nefarious analogy that had suggested it. We had expected, upon looking back, to see a terrible and incredible moving entity if the mists were thin enough; but of that entity we had formed a clear idea. What we did see—for the mists were indeed all too malignly thinned—was something altogether different, and immeasurably more hideous and detestable. It was the utter, objective embodiment of the fantastic novelist's "thing that should not be"; and its nearest comprehensible analogue is a vast, onrushing subway train as one sees it from a station platform—the great black front looming colossally out of infinite subterranean distance, constellated with strangely colored lights and filling the prodigious burrow as a piston fills a cylinder.

But we were not on a station platform. We were on the track ahead as the nightmare, plastic column of fetid black iridescence oozed tightly onward through its fifteen-foot sinus, gathering unholy speed and driving before it a spiral,

re-thickening cloud of the pallid abyss-vapor. It was a terrible, indescribable thing vaster than any subway train—a shapeless congeries of protoplasmic bubbles, faintly self-luminous, and with myriads of temporary eyes forming and un-forming as pustules of greenish light all over the tunnel-filling front that bore down upon us, crushing the frantic penguins and slithering over the glistening floor that it and its kind had swept so evilly free of all litter. Still came that eldritch, mocking cry—“Tekeli-li! Tekeli-li!” and at last we remembered that the demoniac Shoggoths—given life, thought, and plastic organ patterns solely by the Old Ones, and having no language save that which the dot-groups expressed—had likewise no voice save the imitated accents of their bygone masters.

XII.

Danforth and I have recollections of emerging into the great sculptured hemisphere and of threading our back trail through the Cyclopean rooms and corridors of the dead city; yet these are purely dream-fragments involving no memory of volition, details, or physical exertion. It was as if we floated in a nebulous world or dimension without time, causation, or orientation. The gray half-day-light of the vast circular space sobered us somewhat; but we did

not go near those cached sledges or look again at poor Gedney and the dog. They have a strange and titanic mausoleum, and I hope the end of this planet will find them still undisturbed.

It was while struggling up the colossal spiral incline that we first felt the terrible fatigue and short breath which our race through the thin plateau air had produced; but not even fear of collapse could make us pause before reaching the normal outer realm of sun and sky. There was something vaguely appropriate about our departure from those buried epochs; for as we wound our panting way up the sixty-foot cylinder of primal masonry, we glimpsed beside us a continuous procession of heroic sculptures in the dead race's early and undecayed technique—a farewell from the Old Ones, written fifty million years ago.

Finally scrambling out at the top, we found ourselves on a great mound of tumbled blocks, with the curved walls of higher stonework rising westward, and the brooding peaks of the great mountains showing beyond the more crumbled structures toward the east. The low antarctic sun of midnight peered redly from the southern horizon through rifts in the jagged ruins, and the terrible age and deadness of the nightmare city seemed all the starker by contrast with such relatively known and accustomed things as the features of the polar landscape. The sky above was a churning and

opalescent mass of tenuous ice-vapors, and the cold clutched at our vitals. Wearily resting the outfit-bags to which we had instinctively clung throughout our desperate flight, we rebuttoned our heavy garments for the stumbling climb down the mound and the walk through the aeon-old stone maze to the foothills where our aeroplane waited. Of what had set us fleeing from that darkness of earth's secret and archaic gulfs we said nothing at all.

In less than a quarter of an hour we had found the steep grade to the foothills—the probable ancient terrace—by which we had descended, and could see the dark bulk of our great plane amidst the sparse ruins on the rising slope ahead. Halfway uphill toward our goal we paused for a momentary breathing spell, and turned to look again at the fantastic tangle of incredible stone shapes below us—once more outlined mystically against an unknown west. As we did so we saw that the sky beyond had lost its morning haziness; the restless ice-vapors having moved up to the zenith, where their mocking outlines seemed on the point of settling into some bizarre pattern which they feared to make quite definite or conclusive.

There now lay revealed on the ultimate white horizon behind the grotesque city a dim, elfin line of pinnacled violet whose needle-pointed heights loomed dreamlike against the beckoning rose-color of the western sky. Up toward this

shimmering rim sloped the ancient table-land, the depressed course of the bygone river traversing it as an irregular ribbon of shadow. For a second we gasped in admiration of the scene's unearthly cosmic beauty, and then vague horror began to creep into our souls. For this far violet line could be nothing else than the terrible mountains of the forbidden land—highest of earth's peaks and focus of earth's evil; harborers of nameless horrors and Archaean secrets; shunned and prayed to by those who feared to carve their meaning; untrodden by any living thing on earth, but visited by the sinister lightnings and sending strange beams across the plains in the polar night—beyond doubt the unknown archetype of that dreaded Kadath in the Cold Waste beyond abhorrent Leng, whereof primal legends hint evasively. We were the first human beings ever to see them—and I hope to God we may be the last.

If the sculptured maps and pictures in that pre-human city had told truly, these cryptic violet mountains could not be much less than three hundred miles away; yet none the less sharply did their dim elfin essence appear above that remote and snowy rim, like the serrated edge of a monstrous alien planet about to rise into unaccustomed heavens. Their height, then, must have been tremendous beyond all comparison—carrying them up into tenuous atmospheric strata peopled only by

such gaseous wraiths as rash flyers have barely lived to whisper of after unexplainable falls. Looking at them, I thought nervously of certain sculptured hints of what the great bygone river had washed down into the city from their accursed slopes—and wondered how much sense and how much folly had lain in the fears of those Old Ones who carved them so reticently. I recalled how their northerly end must come near the coast at Queen Mary Land, where even at that moment Sir Douglas Mawson's expedition was doubtless working less than a thousand miles away; and hoped that no evil fate would give Sir Douglas and his men a glimpse of what might lie beyond the protecting coastal range. Such thoughts formed a measure of my overwrought condition at the time—and Danforth seemed to be even worse.

Yet long before we had passed the great star-shaped ruin and reached our plane, our fears had become transferred to the lesser but vast-enough range whose recrossing lay ahead of us. From these foothills the black, ruin-crustured slopes reared up starkly and hideously against the east, again reminding us of those strange Asian paintings of Nicholas Roerich; and when we thought of the frightful amorphous entities that might have pushed their fetidly squirming way even to the topmost hollow pinnacles, we could not face without panic the prospect of again sailing by those suggestive skyward

cave-mouths where the wind made sounds like an evil musical piping over a wide range. To make matters worse, we saw distinct traces of local mist around several of the summits—as poor Lake must have done when he made that early mistake about volcanism—and thought shiveringly of that kindred mist from which we had just escaped; of that, and of the blasphemous, horror-fostering abyss whence all such vapors came.

All was well with the plane, and we clumsily hauled on our heavy flying furs. Danforth got the engine started without trouble, and we made a very smooth take-off over the nightmare city. Below us the primal Cyclopean masonry spread out as it had done when first we saw it—so short, yet infinitely long, a time ago—and we began rising and turning to test the wind for our crossing through the pass. At a very high level there must have been great disturbance, since the ice-dust clouds of the zenith were doing all sorts of fantastic things; but at twenty-four thousand feet, the height we needed for the pass, we found navigation quite practicable. As we drew close to the jutting peaks the wind's strange piping again became manifest, and I could see Danforth's hands trembling at the controls. Rank amateur that I was, I thought at that moment that I might be a better navigator than he in effecting the dangerous crossing between pinnacles; and when I made motions to change seats and take over his duties

he did not protest. I tried to keep all my skill and self-possession about me, and stared at the sector of reddish farther sky betwixt the walls of the pass—resolutely refusing to pay attention to the puffs of mountain-top vapor, and wishing that I had wax-stopped ears like Ulysses' men off the Siren's coast to keep that disturbing windpiping from my consciousness.

But Danforth, released from his piloting and keyed up to a dangerous nervous pitch, could not keep quiet. I felt him turning and wriggling about as he looked back at the terrible receding city, ahead at the cave-riddled, cube-barnacled peaks, sidewise at the bleak sea of snowy, rampart-strewn foothills, and upward at the seething, grotesquely clouded sky. It was then, just as I was trying to steer safely through the pass, that his mad shrieking brought us so close to disaster by shattering my tight hold on myself and causing me to fumble helplessly with the controls for a moment. A second afterward my resolution triumphed and we made the crossing safely—yet I am afraid that Danforth will never be the same again.

I have said that Danforth refused to tell me what final horror made him scream out so insanely—a horror which, I feel sadly sure, is mainly responsible for his present breakdown. We had snatches of shouted conversation above the wind's piping and the engine's buzzing as we reached the safe side of the range

and swooped slowly down toward the camp, but that had mostly to do with the pledges of secrecy we had made as we prepared to leave the nightmare city. Certain things, we had agreed, were not for people to know and discuss lightly—and I would not speak of them now but for the need of heading off that Starkweather-Moore Expedition, and others, at any cost. It is absolutely necessary, for the peace and safety of mankind, that some of earth's dark, dead corners and unplumbed depths be let alone; lest sleeping abnormalities wake to resurgent life, and blasphemously surviving nightmares squirm and splash out of their black lairs to newer and wider conquests.

All that Danforth has ever hinted is that the final horror was a mirage. It was not, he declares, anything connected with the cubes and caves of those echoing, vaporous, wormily-honeycombed mountains of madness which we crossed; but a single fantastic, demoniac glimpse, among the churning zenith-clouds, of what lay back of those other violet westward mountains which the Old Ones had shunned and feared. It is very probable that the thing was a sheer delusion born of the previous stresses we had passed through, and of the actual though unrecognized mirage of the dead transmontane city experienced near Lake's camp the day before; but it was so real to Danforth that he suffers from it still.

He has on rare occasions whispered disjointed and irresponsible

things about "The black pit," "the carven rim," "the proto-Shoggoths," "the windowless solids with five dimensions," "the nameless cylinder," "the elder Pharos," "Yog-Sothoth," "the primal white jelly," "the color out of space," "the wings," "the eyes in darkness," "the moon-ladder," "the original, the eternal, the undying," and other bizarre conceptions; but when he is fully himself he repudiates all this and attributes it to his curious and macabre reading of earlier years. Danforth, indeed, is known to be among the few who have ever dared go completely through that worm-riddled copy of the Necronomicon kept under lock and key in the college library.

The higher sky, as we crossed the range, was surely vaporous and disturbed enough; and although I did not see the zenith, I can well imagine that its swirls of ice dust may have taken strange forms. Imagination, knowing how vividly distant scenes can sometimes be reflected, refracted, and magnified by such layers of restless cloud, might easily have supplied the rest—and, of course, Danforth did not hint any of these specific horrors till after his memory had had a chance to draw on his bygone reading. He could never have seen so much in one instantaneous glance.

At the time, his shrieks were confined to the repetition of a single, mad word of all too obvious source: "Tekeli-li! Tekeli-li!"

The SHADOW *over* INNSMOUTH.

[RETURN TO TABLE OF CONTENTS]

During the winter of 1927-28 officials of the Federal government made a strange and secret investigation of certain conditions in the ancient Massachusetts seaport of Innsmouth. The public first learned of it in February, when a vast series of raids and arrests occurred, followed by the deliberate burning and dynamiting—under suitable precautions—of an enormous number of crumbling, worm-eaten, and supposedly empty houses along the abandoned waterfront. Uninquiring souls let this occurrence pass as one of the major clashes in a spasmodic war on liquor.

Keener news-followers, however, wondered at the prodigious number

of arrests, the abnormally large force of men used in making them, and the secrecy surrounding the disposal of the prisoners. No trials, or even definite charges were reported; nor were any of the captives seen thereafter in the regular gaols of the nation. There were vague statements about disease and concentration camps, and later about dispersal in various naval and military prisons, but nothing positive ever developed. Innsmouth itself was left almost depopulated, and it is even now only beginning to show signs of a sluggishly revived existence.

Complaints from many liberal organizations were met with long confidential discussions, and representatives were taken on trips to certain camps and prisons. As a

result, these societies became surprisingly passive and reticent. Newspaper men were harder to manage, but seemed largely to cooperate with the government in the end. Only one paper—a tabloid always discounted because of its wild policy—mentioned the deep diving submarine that discharged torpedoes downward in the marine abyss just beyond Devil Reef. That item, gathered by chance in a haunt of sailors, seemed indeed rather far-fetched; since the low, black reef lay a full mile and a half out from Innsmouth Harbour.

People around the country and in the nearby towns muttered a great deal among themselves, but said very little to the outer world. They had talked about dying and half-deserted Innsmouth for nearly a century, and nothing new could be wilder or more hideous than what they had whispered and hinted at years before. Many things had taught them secretiveness, and there was no need to exert pressure on them. Besides, they really knew little; for wide salt marshes, desolate and unpeopled, kept neighbors off from Innsmouth on the landward side.

But at last I am going to defy the ban on speech about this thing. Results, I am certain, are so thorough that no public harm save a shock of repulsion could ever accrue from a hinting of what was found by those horrified men at Innsmouth. Besides, what was found might possibly have more than one explanation. I do not

know just how much of the whole tale has been told even to me, and I have many reasons for not wishing to probe deeper. For my contact with this affair has been closer than that of any other layman, and I have carried away impressions which are yet to drive me to drastic measures.

It was I who fled frantically out of Innsmouth in the early morning hours of July 16, 1927, and whose frightened appeals for government inquiry and action brought on the whole reported episode. I was willing enough to stay mute while the affair was fresh and uncertain; but now that it is an old story, with public interest and curiosity gone, I have an odd craving to whisper about those few frightful hours in that ill-rumored and evilly-shadowed seaport of death and blasphemous abnormality. The mere telling helps me to restore confidence in my own faculties; to reassure myself that I was not the first to succumb to a contagious nightmare hallucination. It helps me, too, in making up my mind regarding a certain terrible step which lies ahead of me.

I never heard of Innsmouth till the day before I saw it for the first and—so far—last time. I was celebrating my coming of age by a tour of New England—sight-seeing, antiquarian, and genealogical—and had planned to go directly from ancient Newburyport to Arkham, whence my mother's family was derived. I had no car,

but was travelling by train, trolley and motor-coach, always seeking the cheapest possible route. In Newburyport they told me that the steam train was the thing to take to Arkham; and it was only at the station ticket-office, when I demurred at the high fare, that I learned about Innsmouth. The stout, shrewd-faced agent, whose speech shewed him to be no local man, seemed sympathetic toward my efforts at economy, and made a suggestion that none of my other informants had offered.

"You could take that old bus, I suppose," he said with a certain hesitation, "but it ain't thought much of hereabouts. It goes through Innsmouth—you may have heard about that—and so the people don't like it. Run by an Innsmouth fellow—Joe Sargent—but never gets any custom from here, or Arkham either, I guess. Wonder it keeps running at all. I s'pose it's cheap enough, but I never see mor'n two or three people in it—nobody but those Innsmouth folk. Leaves the square—front of Hammond's Drug Store—at 10 a.m. and 7 p.m. unless they've changed lately. Looks like a terrible rattletrap—I've never been on it."

That was the first I ever heard of shadowed Innsmouth. Any reference to a town not shown on common maps or listed in recent guidebooks would have interested me, and the agent's odd manner of allusion roused something like real

curiosity. A town able to inspire such dislike in its neighbors, I thought, must be at least rather unusual, and worthy of a tourist's attention. If it came before Arkham I would stop off there and so I asked the agent to tell me something about it. He was very deliberate, and spoke with an air of feeling slightly superior to what he said.

"Innsmouth? Well, it's a queer kind of a town down at the mouth of the Manuxet. Used to be almost a city—quite a port before the War of 1812—but all gone to pieces in the last hundred years or so. No railroad now—B. and M. never went through, and the branch line from Rowley was given up years ago.

"More empty houses than there are people, I guess, and no business to speak of except fishing and lobstering. Everybody trades mostly either here or in Arkham or Ipswich. Once they had quite a few mills, but nothing's left now except one gold refinery running on the leanest kind of part time.

"That refinery, though, used to be a big thing, and old man Marsh, who owns it, must be richer'n Croesus. Queer old duck, though, and sticks mighty close in his home. He's supposed to have developed some skin disease or deformity late in life that makes him keep out of sight. Grandson of Captain Obed Marsh, who founded the business. His mother seems to've been some kind of foreigner—they say a South Sea islander—so everybody raised

Cain when he married an Ipswich girl fifty years ago. They always do that about Innsmouth people, and folks here and hereabouts always try to cover up any Innsmouth blood they have in 'em. But Marsh's children and grandchildren look just like anyone else far's I can see. I've had 'em pointed out to me here—though, come to think of it, the elder children don't seem to be around lately. Never saw the old man.

"And why is everybody so down on Innsmouth? Well, young fellow, you mustn't take too much stock in what people here say. They're hard to get started, but once they do get started they never let up. They've been telling things about Innsmouth—whispering 'em, mostly—for the last hundred years, I guess, and I gather they're more scared than anything else. Some of the stories would make you laugh—about old Captain Marsh driving bargains with the devil and bringing imps out of hell to live in Innsmouth, or about some kind of devil-worship and awful sacrifices in some place near the wharves that people stumbled on around 1845 or thereabouts—but I come from Panton, Vermont, and that kind of story don't go down with me.

"You ought to hear, though, what some of the old-timers tell about the black reef off the coast—Devil Reef, they call it. It's well above water a good part of the time, and never much below it, but at that you could hardly call it an island. The story is

that there's a whole legion of devils seen sometimes on that reef—sprawled about, or darting in and out of some kind of caves near the top. It's a rugged, uneven thing, a good bit over a mile out, and toward the end of shipping days sailors used to make big detours just to avoid it.

"That is, sailors that didn't hail from Innsmouth. One of the things they had against old Captain Marsh was that he was supposed to land on it sometimes at night when the tide was right. Maybe he did, for I dare say the rock formation was interesting, and it's just barely possible he was looking for pirate loot and maybe finding it; but there was talk of his dealing with demons there. Fact is, I guess on the whole it was really the Captain that gave the bad reputation to the reef.

"That was before the big epidemic of 1846, when over half the folks in Innsmouth was carried off. They never did quite figure out what the trouble was, but it was probably some foreign kind of disease brought from China or somewhere by the shipping. It surely was bad enough—there was riots over it, and all sorts of ghastly doings that I don't believe ever got outside of town—and it left the place in awful shape. Never came back—there can't be more'n 300 or 400 people living there now.

"But the real thing behind the way folks feel is simply race prejudice—and I don't say I'm blaming those that hold it. I hate those

Innsmouth folks myself, and I wouldn't care to go to their town. I s'pose you know—though I can see you're a Westerner by your talk—what a lot our New England ships used to have to do with queer ports in Africa, Asia, the South Seas, and everywhere else, and what queer kinds of people they sometimes brought back with 'em. You've probably heard about the Salem man that came home with a Chinese wife, and maybe you know there's still a bunch of Fiji Islanders somewhere around Cape Cod.

"Well, there must be something like that back of the Innsmouth people. The place always was badly cut off from the rest of the country by marshes and creeks and we can't be sure about the ins and outs of the matter; but it's pretty clear that old Captain Marsh must have brought home some odd specimens when he had all three of his ships in commission back in the twenties and thirties. There certainly is a strange kind of streak in the Innsmouth folks today—I don't know how to explain it but it sort of makes you crawl. You'll notice a little in Sargent if you take his bus. Some of 'em have queer narrow heads with flat noses and bulgy, starry eyes that never seem to shut, and their skin ain't quite right. Rough and scabby, and the sides of the necks are all shriveled or creased up. Get bald, too, very young. The older fellows look the worst—fact is, I don't believe I've ever seen a very old chap of that kind. Guess they

must die of looking in the glass! Animals hate 'em—they used to have lots of horse trouble before the autos came in.

"Nobody around here or in Arkham or Ipswich will have anything to do with 'em, and they act kind of offish themselves when they come to town or when anyone tries to fish on their grounds. Queer how fish are always thick off Innsmouth Harbour when there ain't any anywhere else around—but just try to fish there yourself and see how the folks chase you off! Those people used to come here on the railroad—walking and taking the train at Rowley after the branch was dropped—but now they use that bus.

"Yes, there's a hotel in Innsmouth—called the Gilman House—but I don't believe it can amount to much. I wouldn't advise you to try it. Better stay over here and take the ten o'clock bus tomorrow morning; then you can get an evening bus there for Arkham at eight o'clock. There was a factory inspector who stopped at the Gilman a couple of years ago and he had a lot of unpleasant hints about the place. Seems they get a queer crowd there, for this fellow heard voices in other rooms—though most of 'em was empty—that gave him the shivers. It was foreign talk he thought, but he said the bad thing about it was the kind of voice that sometimes spoke. It sounded so unnatural—slopping like, he said—that he didn't dare undress and go

to sleep. Just waited up and lit out the first thing in the morning. The talk went on most all night.

"This fellow—Casey, his name was—had a lot to say about how the Innsmouth folk watched him and seemed kind of on guard. He found the Marsh refinery a queer place—it's in an old mill on the lower falls of the Manuxet. What he said tallied up with what I'd heard. Books in bad shape, and no clear account of any kind of dealings. You know it's always been a kind of mystery where the Marshes get the gold they refine. They've never seemed to do much buying in that line, but years ago they shipped out an enormous lot of ingots.

"Used to be talk of a queer foreign kind of jewelry that the sailors and refinery men sometimes sold on the sly, or that was seen once or twice on some of the Marsh women-folks. People allowed maybe old Captain Obed traded for it in some heathen port, especially since he always ordered stacks of glass beads and trinkets such as seafaring men used to get for native trade. Others thought and still think he'd found an old pirate cache out on Devil Reef. But here's a funny thing. The old Captain's been dead these sixty years, and there's ain't been a good-sized ship out of the place since the Civil War; but just the same the Marshes still keep on buying a few of those native trade things—mostly glass and rubber gewgaws, they tell me. Maybe the Innsmouth

folks like 'em to look at themselves—Gawd knows they've gotten to be about as bad as South Sea cannibals and Guinea savages.

"That plague of '46 must have taken off the best blood in the place. Anyway, they're a doubtful lot now, and the Marshes and other rich folks are as bad as any. As I told you, there probably ain't more'n 400 people in the whole town in spite of all the streets they say there are. I guess they're what they call 'white trash' down South—lawless and sly, and full of secret things. They get a lot of fish and lobsters and do exporting by truck. Queer how the fish swarm right there and nowhere else.

"Nobody can ever keep track of these people, and state school officials and census men have a devil of a time. You can bet that prying strangers ain't welcome around Innsmouth. I've heard personally of more'n one business or government man that's disappeared there, and there's loose talk of one who went crazy and is out at Danvers now. They must have fixed up some awful scare for that fellow.

"That's why I wouldn't go at night if I was you. I've never been there and have no wish to go, but I guess a daytime trip couldn't hurt you—even though the people hereabouts will advise you not to make it. If you're just sightseeing, and looking for old-time stuff, Innsmouth ought to be quite a place for you."

And so I spent part of that evening at the Newburyport Public

Library looking up data about Innsmouth. When I had tried to question the natives in the shops, the lunchroom, the garages, and the fire station, I had found them even harder to get started than the ticket agent had predicted; and realized that I could not spare the time to overcome their first instinctive reticence. They had a kind of obscure suspiciousness, as if there were something amiss with anyone too much interested in Innsmouth. At the Y.M.C.A., where I was stopping, the clerk merely discouraged my going to such a dismal, decadent place; and the people at the library shewed much the same attitude. Clearly, in the eyes of the educated, Innsmouth was merely an exaggerated case of civic degeneration.

The Essex County histories on the library shelves had very little to say, except that the town was founded in 1643, noted for shipbuilding before the Revolution, a seat of great marine prosperity in the early 19th century, and later a minor factory center using the Manuxet as power. The epidemic and riots of 1846 were very sparsely treated, as if they formed a discredit to the county.

References to decline were few, though the significance of the later record was unmistakable. After the Civil War all industrial life was confined to the Marsh Refining Company, and the marketing of gold ingots formed the only remaining bit of major commerce aside from the eternal fishing. That fishing paid

less and less as the price of the commodity fell and large-scale corporations offered competition, but there was never a dearth of fish around Innsmouth Harbour. Foreigners seldom settled there, and there was some discreetly veiled evidence that a number of Poles and Portuguese who had tried it had been scattered in a peculiarly drastic fashion.

Most interesting of all was a glancing reference to the strange jewelry vaguely associated with Innsmouth. It had evidently impressed the whole countryside more than a little, for mention was made of specimens in the museum of Miskatonic University at Arkham, and in the display room of the Newburyport Historical Society. The fragmentary descriptions of these things were bald and prosaic, but they hinted to me an undercurrent of persistent strangeness. Something about them seemed so odd and provocative that I could not put them out of my mind, and despite the relative lateness of the hour I resolved to see the local sample—said to be a large, queerly-proportioned thing evidently meant for a tiara—if it could possibly be arranged.

The librarian gave me a note of introduction to the curator of the Society, a Miss Anna Tilton, who lived nearby, and after a brief explanation that ancient gentlewoman was kind enough to pilot me into the closed building, since the hour

was not outrageously late. The collection was a notable one indeed, but in my present mood I had eyes for nothing but the bizarre object which glistened in a corner cupboard under the electric lights.

It took no excessive sensitiveness to beauty to make me literally gasp at the strange, unearthly splendour of the alien, opulent phantasy that rested there on a purple velvet cushion. Even now I can hardly describe what I saw, though it was clearly enough a sort of tiara, as the description had said. It was tall in front, and with a very large and curiously irregular periphery, as if designed for a head of almost freakishly elliptical outline. The material seemed to be predominantly gold, though a weird lighter lustrousness hinted at some strange alloy with an equally beautiful and scarcely identifiable metal. Its condition was almost perfect, and one could have spent hours in studying the striking and puzzlingly untraditional designs—some simply geometrical, and some plainly marine—chased or moulded in high relief on its surface with a craftsmanship of incredible skill and grace.

The longer I looked, the more the thing fascinated me; and in this fascination there was a curiously disturbing element hardly to be classified or accounted for. At first I decided that it was the queer otherworldly quality of the art which made me uneasy. All other art objects I had ever seen either belonged to

some known racial or national stream, or else were consciously modernistic defiances of every recognized stream. This tiara was neither. It clearly belonged to some settled technique of infinite maturity and perfection, yet that technique was utterly remote from any—Eastern or Western, ancient or modern—which I had ever heard of or seen exemplified. It was as if the workmanship were that of another planet.

However, I soon saw that my uneasiness had a second and perhaps equally potent source residing in the pictorial and mathematical suggestion of the strange designs. The patterns all hinted of remote secrets and unimaginable abysses in time and space, and the monotonously aquatic nature of the reliefs became almost sinister. Among these reliefs were fabulous monsters of abhorrent grotesqueness and malignity—half ichthyic and half batrachian in suggestion—which one could not dissociate from a certain haunting and uncomfortable sense of pseudo-memory, as if they called up some image from deep cells and tissues whose retentive functions are wholly primal and awesomely ancestral. At times I fancied that every contour of these blasphemous fish-frogs was over-flowing with the ultimate quintessence of unknown and inhuman evil.

In odd contrast to the tiara's aspect was its brief and prosy history as related by Miss Tilton. It had been pawned for a ridiculous sum at a

shop in State Street in 1873, by a drunken Innsmouth man shortly afterward killed in a brawl. The Society had acquired it directly from the pawnbroker, at once giving it a display worthy of its quality. It was labeled as of probable East-Indian or Indochinese provenance, though the attribution was frankly tentative.

Miss Tilton, comparing all possible hypotheses regarding its origin and its presence in New England, was inclined to believe that it formed part of some exotic pirate hoard discovered by old Captain Obed Marsh. This view was surely not weakened by the insistent offers of purchase at a high price which the Marshes began to make as soon as they knew of its presence, and which they repeated to this day despite the Society's unvarying determination not to sell.

As the good lady shewed me out of the building she made it clear that the pirate theory of the Marsh fortune was a popular one among the intelligent people of the region. Her own attitude toward shadowed Innsmouth—which she had never seen—was one of disgust at a community slipping far down the cultural scale, and she assured me that the rumours of devil-worship were partly justified by a peculiar secret cult which had gained force there and engulfed all the orthodox churches.

It was called, she said, "The Esoteric Order of Dagon," and was

undoubtedly a debased, quasi-pagan thing imported from the East a century before, at a time when the Innsmouth fisheries seemed to be going barren. Its persistence among a simple people was quite natural in view of the sudden and permanent return of abundantly fine fishing, and it soon came to be the greatest influence in the town, replacing Freemasonry altogether and taking up headquarters in the old Masonic Hall on New Church Green.

All this, to the pious Miss Tilton, formed an excellent reason for shunning the ancient town of decay and desolation; but to me it was merely a fresh incentive. To my architectural and historical anticipations was now added an acute anthropological zeal, and I could scarcely sleep in my small room at the "Y" as the night wore away.

Shortly before ten the next morning I stood with one small valise in front of Hammond's Drug Store in old Market Square waiting for the Innsmouth bus. As the hour for its arrival drew near I noticed a general drift of the loungers to other places up the street, or to the Ideal Lunch across the square. Evidently the ticket-agent had not exaggerated the dislike which local people bore toward Innsmouth and its denizens. In a few moments a small motor-coach of extreme decrepitude and dirty grey colour rattled down State Street, made a turn,

and drew up at the curb beside me. I felt immediately that it was the right one; a guess which the half-illegible sign on the windshield—Arkham-Innsmouth-Newburyport—soon verified.

There were only three passengers—dark, unkempt men of sullen visage and somewhat youthful cast—and when the vehicle stopped they clumsily shambled out and began walking up State Street in a silent, almost furtive fashion. The driver also alighted, and I watched him as he went into the drug store to make some purchase. This, I reflected, must be the Joe Sargent mentioned by the ticket-agent; and even before I noticed any details there spread over me a wave of spontaneous aversion which could be neither checked nor explained. It suddenly struck me as very natural that the local people should not wish to ride on a bus owned and driven by this man, or to visit any oftener than possible the habitat of such a man and his kinsfolk.

When the driver came out of the store I looked at him more carefully and tried to determine the source of my evil impression. He was a thin, stoop-shouldered man not much under six feet tall, dressed in shabby blue civilian clothes and wearing a frayed golf cap. His age was perhaps thirty-five, but the odd, deep creases in the sides of his neck made him seem older when one did not study his dull, expressionless face. He had a narrow head, bulging,

watery-blue eyes that seemed never to wink, a flat nose, a receding forehead and chin, and singularly undeveloped ears. His long thick lip and coarse-pored, greyish cheeks seemed almost beardless except for some sparse yellow hairs that straggled and curled in irregular patches; and in places the surface seemed queerly irregular, as if peeling from some cutaneous disease. His hands were large and heavily veined, and had a very unusual greyish-blue tinge. The fingers were strikingly short in proportion to the rest of the structure, and seemed to have a tendency to curl closely into the huge palm. As he walked toward the bus I observed his peculiarly shambling gait and saw that his feet were inordinately immense. The more I studied them the more I wondered how he could buy any shoes to fit them.

A certain greasiness about the fellow increased my dislike. He was evidently given to working or lounging around the fish docks, and carried with him much of their characteristic smell. Just what foreign blood was in him I could not even guess. His oddities certainly did not look Asiatic, Polynesian, Levantine or negroid, yet I could see why the people found him alien. I myself would have thought of biological degeneration rather than alienage.

I was sorry when I saw there would be no other passengers on the bus. Somehow I did not like the idea of riding alone with this driver. But

as leaving time obviously approached I conquered my qualms and followed the man aboard, extending him a dollar bill and murmuring the single word "Innsmouth." He looked curiously at me for a second as he returned forty cents change without speaking. I took a seat far behind him, but on the same side of the bus, since I wished to watch the shore during the journey.

At length the decrepit vehicle started with a jerk, and rattled noisily past the old brick buildings of State Street amidst a cloud of vapour from the exhaust. Glancing at the people on the sidewalks, I thought I detected in them a curious wish to avoid looking at the bus—or at least a wish to avoid seeming to look at it. Then we turned to the left into High Street, where the going was smoother; flying by stately old mansions of the early republic and still older colonial farmhouses, passing the Lower Green and Parker River, and finally emerging into a long, monotonous stretch of open shore country.

The day was warm and sunny, but the landscape of sand and sedge-grass, and stunted shrubbery became more and desolate as we proceeded. Out the window I could see the blue water and the sandy line of Plum Island, and we presently drew very near the beach as our narrow road veered off from the main highway to Rowley and Ipswich. There were no visible houses, and I could tell by the state of the road that traffic was

very light hereabouts. The weather-worn telephone poles carried only two wires. Now and then we crossed crude wooden bridges over tidal creeks that wound far inland and promoted the general isolation of the region.

Once in a while I noticed dead stumps and crumbling foundation-walls above the drifting sand, and recalled the old tradition quoted in one of the histories I had read, that this was once a fertile and thickly-settled countryside. The change, it was said, came simultaneously with the Innsmouth epidemic of 1846, and was thought by simple folk to have a dark connection with hidden forces of evil. Actually, it was caused by the unwise cutting of woodlands near the shore, which robbed the soil of the best protection and opened the way for waves of wind-blown sand.

At last we lost sight of Plum Island and saw the vast expanse of the open Atlantic on our left. Our narrow course began to climb steeply, and I felt a singular sense of disquiet in looking at the lonely crest ahead where the rutted road-way met the sky. It was as if the bus were about to keep on in its ascent, leaving the sane earth altogether and merging with the unknown arcana of upper air and cryptical sky. The smell of the sea took on ominous implications, and the silent driver's bent, rigid back and narrow head became more and more hateful. As I looked at him I saw that the back of his

head was almost as hairless as his face, having only a few straggling yellow strands upon a grey scabrous surface.

Then we reached the crest and beheld the outspread valley beyond, where the Manuxet joins the sea just north of the long line of cliffs that culminate in Kingsport Head and veer off toward Cape Ann. On the far misty horizon I could just make out the dizzy profile of the Head, topped by the queer ancient house of which so many legends are told; but for the moment all my attention was captured by the nearer panorama just below me. I had, I realized, come face to face with rumour-shadowed Innsmouth.

It was a town of wide extent and dense construction, yet one with a portentous dearth of visible life. From the tangle of chimney-pots scarcely a wisp of smoke came, and the three tall steeples loomed stark and unpainted against the seaward horizon. One of them was crumbling down at the top, and in that and another there were only black gaping holes where clock-dials should have been. The vast huddle of sagging gambrel roofs and peaked gables conveyed with offensive clearness the idea of wormy decay, and as we approached along the now descending road I could see that many roofs had wholly caved in. There were some large square Georgian houses, too, with hipped roofs, cupolas, and railed "widow's walks." These were mostly well back

from the water, and one or two seemed to be in moderately sound condition. Stretching inland from among them I saw the rusted, grass-grown line of the abandoned railway, with leaning telegraph-poles now devoid of wires, and the half-obsured lines of the old carriage roads to Rowley and Ipswich.

The decay was worst close to the waterfront, though in its very midst I could spy the white belfry of a fairly well preserved brick structure which looked like a small factory. The harbour, long clogged with sand, was enclosed by an ancient stone breakwater; on which I could begin to discern the minute forms of a few seated fishermen, and at whose end were what looked like the foundations of a bygone lighthouse. A sandy tongue had formed inside this barrier and upon it I saw a few decrepit cabins, moored dories, and scattered lobster-pots. The only deep water seemed to be where the river poured out past the belfried structure and turned southward to join the ocean at the breakwater's end.

Here and there the ruins of wharves jutted out from the shore to end in indeterminate rotteness, those farthest south seeming the most decayed. And far out at sea, despite a high tide, I glimpsed a long, black line scarcely rising above the water yet carrying a suggestion of odd latent malignancy. This, I knew, must be Devil Reef. As I looked, a subtle, curious sense of beckoning seemed superadded to the grim

repulsion; and oddly enough, I found this overtone more disturbing than the primary impression.

We met no one on the road, but presently began to pass deserted farms in varying stages of ruin. Then I noticed a few inhabited houses with rags stuffed in the broken windows and shells and dead fish lying about the littered yards. Once or twice I saw listless-looking people working in barren gardens or digging clams on the fishy-smelling beach below, and groups of dirty, simian-visaged children playing around weed-grown doorsteps. Somehow these people seemed more disquieting than the dismal buildings, for almost every one had certain peculiarities of face and motions which I instinctively disliked without being able to define or comprehend them. For a second I thought this typical physique suggested some picture I had seen, perhaps in a book, under circumstances of particular horror or melancholy; but this pseudo-recollection passed very quickly.

As the bus reached a lower level I began to catch the steady note of a waterfall through the unnatural stillness. The leaning, unpainted houses grew thicker, lined both sides of the road, and displayed more urban tendencies than did those we were leaving behind, the panorama ahead had contracted to a street scene, and in spots I could see where a cobblestone pavement and stretches of brick sidewalk had formerly existed. All the houses were

apparently deserted, and there were occasional gaps where tumbledown chimneys and cellar walls told of buildings that had collapsed. Pervading everything was the most nauseous fishy odour imaginable.

Soon cross streets and junctions began to appear; those on the left leading to shoreward realms of unpaved squalor and decay, while those on the right shewed vistas of departed grandeur. So far I had seen no people in the town, but there now came signs of a sparse habitation—curtained windows here and there, and an occasional battered motorcar at the curb. Pavement and sidewalks were increasingly well-defined, and though most of the houses were quite old—wood and brick structures of the early 19th century—they were obviously kept fit for habitation. As an amateur antiquarian I almost lost my olfactory disgust and my feeling of menace and repulsion amidst this rich, unaltered survival from the past.

But I was not to reach my destination without one very strong impression of poignantly disagreeable quality. The bus had come to a sort of open concourse or radial point with churches on two sides and the bedraggled remains of a circular green in the centre, and I was looking at a large pillared hall on the right-hand junction ahead. The structure's once white paint was now gray and peeling and the black and gold sign on the pediment was so faded that I could only with

difficulty make out the words “Esoteric Order of Dagon” This, then was the former Masonic Hall now given over to a degraded cult. As I strained to decipher this inscription my notice was distracted by the raucous tones of a cracked bell across the street, and I quickly turned to look out the window on my side of the coach.

The sound came from a squat stone church of manifestly later date than most of the houses, built in a clumsy Gothic fashion and having a disproportionately high basement with shuttered windows. Though the hands of its clock were missing on the side I glimpsed, I knew that those hoarse strokes were tolling the hour of eleven. Then suddenly all thoughts of time were blotted out by an onrushing image of sharp intensity and unaccountable horror which had seized me before I knew what it really was. The door of the church basement was open, revealing a rectangle of blackness inside. And as I looked, a certain object crossed or seemed to cross that dark rectangle; burning into my brain a momentary conception of nightmare which was all the more maddening because analysis could not shew a single nightmarish quality in it.

It was a living object—the first except the driver that I had seen since entering the compact part of the town—and had I been in a steadier mood I would have found nothing whatever of terror in it. Clearly, as I realised a moment later,

it was the pastor; clad in some peculiar vestments doubtless introduced since the Order of Dagon had modified the ritual of the local churches. The thing which had probably caught my first subconscious glance and supplied the touch of bizarre horror was the tall tiara he wore; an almost exact duplicate of the one Miss Tilton had shown me the previous evening. This, acting on my imagination, had supplied namelessly sinister qualities to the indeterminate face and robed, shambling form beneath it. There was not, I soon decided, any reason why I should have felt that shuddering touch of evil pseudo-memory. Was it not natural that a local mystery cult should adopt among its regimentals an unique type of head-dress made familiar to the community in some strange way—perhaps a treasure-trove?

A very thin sprinkling of repellent-looking youngish people now became visible on the sidewalks—lone individuals, and silent knots of two or three. The lower floors of the crumbling houses sometimes harboured small shops with dingy signs, and I noticed a parked truck or two as we rattled along. The sound of waterfalls became more and more distinct, and presently I saw a fairly deep river-gorge ahead, spanned by a wide, iron-railed highway bridge beyond which a large square opened out. As we clanked over the bridge I looked out on both sides and observed some factory buildings on

the edge of the grassy bluff or part way down. The water far below was very abundant, and I could see two vigorous sets of falls upstream on my right and at least one downstream on my left. From this point the noise was quite deafening. Then we rolled into the large semicircular square across the river and drew up on the right-hand side in front of a tall, cupola crowned building with remnants of yellow paint and with a half-effaced sign proclaiming it to be the Gilman House.

I was glad to get out of that bus, and at once proceeded to check my valise in the shabby hotel lobby. There was only one person in sight—an elderly man without what I had come to call the “Innsmouth look”—and I decided not to ask him any of the questions which bothered me; remembering that odd things had been noticed in this hotel. Instead, I strolled out on the square, from which the bus had already gone, and studied the scene minutely and appraisingly.

On one side of the cobblestoned open space was the straight line of the river; on the other was a semicircle of slant-roofed brick buildings of about the 1800 period, from which several streets radiated away to the southeast, south, and southwest. Lamps were depressingly few and small—all low-powered incandescents—and I was glad that my plans called for departure before dark, even though I knew the moon

would be bright. The buildings were all in fair condition, and included perhaps a dozen shops in current operation; of which one was a grocery of the First National chain, others a dismal restaurant, a drug store, and a wholesale fish-dealer's office, and still another, at the eastward extremity of the square near the river, an office of the town's only industry—the Marsh Refining Company. There were perhaps ten people visible, and four or five automobiles and motor trucks stood scattered about. I did not need to be told that this was the civic centre of Innsmouth. Eastward I could catch blue glimpses of the harbour, against which rose the decaying remains of three once beautiful Georgian steeples. And toward the shore on the opposite bank of the river I saw the white belfry surmounting what I took to be the Marsh refinery.

For some reason or other I chose to make my first inquiries at the chain grocery, whose personnel was not likely to be native to Innsmouth. I found a solitary boy of about seventeen in charge, and was pleased to note the brightness and affability which promised cheerful information. He seemed exceptionally eager to talk, and I soon gathered that he did not like the place, its fishy smell, or its furtive people. A word with any outsider was a relief to him. He hailed from Arkham, boarded with a family who came from Ipswich, and went back whenever he got a moment off. His family did not like

him to work in Innsmouth, but the chain had transferred him there and he did not wish to give up his job.

There was, he said, no public library or chamber of commerce in Innsmouth, but I could probably find my way about. The street I had come down was Federal. West of that were the fine old residence streets—Broad, Washington, Lafayette, and Adams—and east of it were the shoreward slums. It was in these slums—along Main Street—that I would find the old Georgian churches, but they were all long abandoned. It would be well not to make oneself too conspicuous in such neighbourhoods—especially north of the river since the people were sullen and hostile. Some strangers had even disappeared.

Certain spots were almost forbidden territory, as he had learned at considerable cost. One must not, for example, linger much around the Marsh refinery, or around any of the still used churches, or around the pillared Order of Dagon Hall at New Church Green. Those churches were very odd—all violently disavowed by their respective denominations elsewhere, and apparently using the queerest kind of ceremonials and clerical vestments. Their creeds were heterodox and mysterious, involving hints of certain marvelous transformations leading to bodily immortality—of a sort—on this earth. The youth's own pastor—Dr. Wallace of Asbury M. E. Church in Arkham—had gravely urged him not to join

any church in Innsmouth.

As for the Innsmouth people—the youth hardly knew what to make of them. They were as furtive and seldom seen as animals that live in burrows, and one could hardly imagine how they passed the time apart from their desultory fishing. Perhaps—judging from the quantities of bootleg liquor they consumed—they lay for most of the daylight hours in an alcoholic stupor. They seemed sullenly banded together in some sort of fellowship and understanding—despising the world as if they had access to other and preferable spheres of entity. Their appearance—especially those staring, unwinking eyes which one never saw shut—was certainly shocking enough; and their voices were disgusting. It was awful to hear them chanting in their churches at night, and especially during their main festivals or revivals, which fell twice a year on April 30th and October 31st.

They were very fond of the water, and swam a great deal in both river and harbour. Swimming races out to Devil Reef were very common, and everyone in sight seemed well able to share in this arduous sport. When one came to think of it, it was generally only rather young people who were seen about in public, and of these the oldest were apt to be the most tainted-looking. When exceptions did occur, they were mostly persons with no trace of aberrancy, like the old clerk at the hotel.

One wondered what became of the bulk of the older folk, and whether the “Innsmouth look” were not a strange and insidious disease-phenomenon which increased its hold as years advanced.

Only a very rare affliction, of course, could bring about such vast and radical anatomical changes in a single individual after maturity—changes invoking osseous factors as basic as the shape of the skull—but then, even this aspect was no more baffling and unheard-of than the visible features of the malady as a whole. It would be hard, the youth implied, to form any real conclusions regarding such a matter; since one never came to know the natives personally no matter how long one might live in Innsmouth.

The youth was certain that many specimens even worse than the worst visible ones were kept locked indoors in some places. People sometimes heard the queerest kind of sounds. The tottering waterfront hovels north of the river were reputedly connected by hidden tunnels, being thus a veritable warren of unseen abnormalities. What kind of foreign blood—if any—these beings had, it was impossible to tell. They sometimes kept certain especially repulsive characters out of sight when government and others from the outside world came to town.

It would be of no use, my informant said, to ask the natives anything about the place. The only one who

would talk was a very aged but normal looking man who lived at the poorhouse on the north rim of the town and spent his time walking about or lounging around the fire station. This hoary character, Zadok Allen, was 96 years old and somewhat touched in the head, besides being the town drunkard. He was a strange, furtive creature who constantly looked over his shoulder as if afraid of something, and when sober could not be persuaded to talk at all with strangers. He was, however, unable to resist any offer of his favorite poison; and once drunk would furnish the most astonishing fragments of whispered reminiscence.

After all, though, little useful data could be gained from him; since his stories were all insane, incomplete hints of impossible marvels and horrors which could have no source save in his own disordered fancy. Nobody ever believed him, but the natives did not like him to drink and talk with strangers; and it was not always safe to be seen questioning him. It was probably from him that some of the wildest popular whispers and delusions were derived.

Several non-native residents had reported monstrous glimpses from time to time, but between old Zadok's tales and the malformed inhabitants it was no wonder such illusions were current. None of the non-natives ever stayed out late at night, there being a widespread

impression that it was not wise to do so. Besides, the streets were loathsomely dark.

As for business—the abundance of fish was certainly almost uncanny, but the natives were taking less and less advantage of it. Moreover, prices were falling and competition was growing. Of course the town's real business was the refinery, whose commercial office was on the square only a few doors east of where we stood. Old Man Marsh was never seen, but sometimes went to the works in a closed, curtained car.

There were all sorts of rumors about how Marsh had come to look. He had once been a great dandy; and people said he still wore the frock-coated finery of the Edwardian age curiously adapted to certain deformities. His son had formerly conducted the office in the square, but latterly they had been keeping out of sight a good deal and leaving the brunt of affairs to the younger generation. The sons and their sisters had come to look very queer, especially the elder ones; and it was said that their health was failing.

One of the Marsh daughters was a repellent, reptilian-looking woman who wore an excess of weird jewelry clearly of the same exotic tradition as that to which the strange tiara belonged. My informant had noticed it many times, and had heard it spoken of as coming from some secret hoard, either of pirates or of demons. The clergymen—or priests, or whatever they were called

nowadays—also wore this kind of ornament as a headdress; but one seldom caught glimpses of them. Other specimens the youth had not seen, though many were rumoured to exist around Innsmouth.

The Marshes, together with the other three gently bred families of the town—the Waites, the Gilmans, and the Eliots—were all very retiring. They lived in immense houses along Washington Street, and several were reputed to harbour in concealment certain living kinsfolk whose personal aspect forbade public view, and whose deaths had been reported and recorded.

Warning me that many of the street signs were down, the youth drew for my benefit a rough but ample and painstaking sketch map of the town's salient features. After a moment's study I felt sure that it would be of great help, and pocketed it with profuse thanks. Disliking the dinginess of the single restaurant I had seen, I bought a fair supply of cheese crackers and ginger wafers to serve as a lunch later on. My program, I decided, would be to thread the principal streets, talk with any non-natives I might encounter, and catch the eight o'clock coach for Arkham. The town, I could see, formed a significant and exaggerated example of communal decay; but being no sociologist I would limit my serious observations to the field of architecture.

Thus I began my systematic though half-bewildered tour of

Innsmouth's narrow, shadow-blighted ways. Crossing the bridge and turning toward the roar of the lower falls, I passed close to the Marsh refinery, which seemed to be oddly free from the noise of industry. The building stood on the steep river bluff near a bridge and an open confluence of streets which I took to be the earliest civic center, displaced after the Revolution by the present Town Square.

Re-crossing the gorge on the Main Street bridge, I struck a region of utter desertion which somehow made me shudder. Collapsing huddles of gambrel roofs formed a jagged and fantastic skyline, above which rose the ghoulis, decapitated steeple of an ancient church. Some houses along Main Street were tenanted, but most were tightly boarded up. Down unpaved side streets I saw the black, gaping windows of deserted hovels, many of which leaned at perilous and incredible angles through the sinking of part of the foundations. Those windows stared so spectrally that it took courage to turn eastward toward the waterfront. Certainly, the terror of a deserted house swells in geometrical rather than arithmetical progression as houses multiply to form a city of stark desolation. The sight of such endless avenues of fishy-eyed vacancy and death, and the thought of such linked infinities of black, brooding compartments given over to cob-webs and memories and the conqueror worm, start

up vestigial fears and aversions that not even the stoutest philosophy can disperse.

Fish Street was as deserted as Main, though it differed in having many brick and stone warehouses still in excellent shape. Water Street was almost its duplicate, save that there were great seaward gaps where wharves had been. Not a living thing did I see except for the scattered fishermen on the distant breakwater, and not a sound did I hear save the lapping of the harbour tides and the roar of the falls in the Manuxet. The town was getting more and more on my nerves, and I looked behind me furtively as I picked my way back over the tottering Water Street bridge. The Fish Street bridge, according to the sketch, was in ruins.

North of the river there were traces of squalid life—active fish-packing houses in Water Street, smoking chimneys and patched roofs here and there, occasional sounds from indeterminate sources, and infrequent shambling forms in the dismal streets and unpaved lanes—but I seemed to find this even more oppressive than the southerly desertion. For one thing, the people were more hideous and abnormal than those near the centre of the town; so that I was several times evilly reminded of something utterly fantastic which I could not quite place. Undoubtedly the alien strain in the Innsmouth folk was stronger here than farther inland—unless,

indeed, the “Innsmouth look” were a disease rather than a blood stain, in which case this district might be held to harbour the more advanced cases.

One detail that annoyed me was the distribution of the few faint sounds I heard. They ought naturally to have come wholly from the visibly inhabited houses, yet in reality were often strongest inside the most rigidly boarded-up facades. There were creakings, scurrings, and hoarse doubtful noises; and I thought uncomfortably about the hidden tunnels suggested by the grocery boy. Suddenly I found myself wondering what the voices of those denizens would be like. I had heard no speech so far in this quarter, and was unaccountably anxious not to do so.

Pausing only long enough to look at two fine but ruinous old churches at Main and Church streets, I hastened out of that vile waterfront slum. My next logical goal was New Church Green, but somehow or other I could not bear to re-pass the church in whose basement I had glimpsed the inexplicably frightening form of that strangely diademmed priest or pastor. Besides, the grocery youth had told me that churches, as well as the Order of Dagon Hall, were not advisable neighbourhoods for strangers.

Accordingly I kept north along Main to Martin, then turning inland, crossing Federal Street safely north of the Green, and entering the decayed patrician neighbourhood of

northern Broad, Washington, Lafayette, and Adams streets. Though these stately old avenues were ill-surfaced and unkempt, their elm-shaded dignity had not entirely departed. Mansion after mansion claimed my gaze, most of them decrepit and boarded up amidst neglected grounds, but one or two in each street shewing signs of occupancy. In Washington Street there was a row of four or five in excellent repair and with finely-tended lawns and gardens. The most sumptuous of these—with wide terraced parterres extending back the whole way to Lafayette Street—I took to be the home of Old Man Marsh, the afflicted refinery owner.

In all these streets no living thing was visible, and I wondered at the complete absence of cats and dogs from Innsmouth. Another thing which puzzled and disturbed me, even in some of the best-preserved mansions, was the tightly shuttered condition of many third-story and attic windows. Furtiveness and secretiveness seemed universal in this hushed city of alienage and death, and I could not escape the sensation of being watched from ambush on every hand by sly, staring eyes that never shut.

I shivered as the cracked stroke of three sounded from a belfry on my left. Too well did I recall the squat church from which those notes came. Following Washington street toward the river, I now faced a new zone of former industry and

commerce; noting the ruins of a factory ahead, and seeing others, with the traces of an old railway station and covered railway bridge beyond, up the gorge on my right.

The uncertain bridge now before me was posted with a warning sign, but I took the risk and crossed again to the south bank where traces of life reappeared. Furtive, shambling creatures stared cryptically in my direction, and more normal faces eyed me coldly and curiously. Innsmouth was rapidly becoming intolerable, and I turned down Paine Street toward the Square in the hope of getting some vehicle to take me to Arkham before the still-distant starting-time of that sinister bus.

It was then that I saw the tumbledown fire station on my left, and noticed the red faced, bushy-bearded, watery eyed old man in nondescript rags who sat on a bench in front of it talking with a pair of unkempt but not abnormal looking firemen. This, of course, must be Zadok Allen, the half-crazed, liquorish nonagenarian whose tales of old Innsmouth and its shadow were so hideous and incredible.

It must have been some imp of the perverse—or some sardonic pull from dark, hidden sources—which made me change my plans as I did. I had long before resolved to limit my observations to architecture alone, and I was even then hurrying toward the Square in an effort to get quick

transportation out of this festering city of death and decay; but the sight of old Zadok Allen set up new currents in my mind and made me slacken my pace uncertainly.

I had been assured that the old man could do nothing but hint at wild, disjointed, and incredible legends, and I had been warned that the natives made it unsafe to be seen talking with him; yet the thought of this aged witness to the town's decay, with memories going back to the early days of ships and factories, was a lure that no amount of reason could make me resist. After all, the strangest and maddest of myths are often merely symbols or allegories based upon truth—and old Zadok must have seen everything which went on around Innsmouth for the last ninety years. Curiosity flared up beyond sense and caution, and in my youthful egotism I fancied I might be able to sift a nucleus of real history from the confused, extravagant outpouring I would probably extract with the aid of raw whiskey.

I knew that I could not accost him then and there, for the firemen would surely notice and object. Instead, I reflected, I would prepare by getting some bootleg liquor at a place where the grocery boy had told me it was plentiful. Then I would loaf near the fire station in apparent casualness, and fall in with old Zadok after he had started on one of his frequent rambles. The youth had said that he was very restless, seldom sitting around the station for more

than an hour or two at a time.

A quart bottle of whiskey was easily, though not cheaply, obtained in the rear of a dingy variety-store just off the Square in Eliot Street. The dirty-looking fellow who waited on me had a touch of the staring "Innsmouth look," but was quite civil in his way; being perhaps used to the custom of such convivial strangers—truckmen, gold-buyers, and the like—as were occasionally in town.

Reentering the Square I saw that luck was with me; for—shuffling out of Paine street around the corner of the Gilman House—I glimpsed nothing less than the tall, lean, tattered form of old Zadok Allen himself. In accordance with my plan, I attracted his attention by brandishing my newly-purchased bottle: and soon realised that he had begun to shuffle wistfully after me as I turned into Waite Street on my way to the most deserted region I could think of.

I was steering my course by the map the grocery boy had prepared, and was aiming for the wholly abandoned stretch of southern waterfront which I had previously visited. The only people in sight there had been the fishermen on the distant break-water; and by going a few squares south I could get beyond the range of these, finding a pair of seats on some abandoned wharf and being free to question old Zadok unobserved for an indefinite time. Before I reached Main Street I could hear

a faint and wheezy "Hey, Mister!" behind me and I presently allowed the old man to catch up and take copious pulls from the quart bottle.

I began putting out feelers as we walked amidst the omnipresent desolation and crazily tilted ruins, but found that the aged tongue did not loosen as quickly as I had expected. At length I saw a grass-grown opening toward the sea between crumbling brick walls, with the weedy length of an earth-and-masonry wharf projecting beyond. Piles of moss-covered stones near the water promised tolerable seats, and the scene was sheltered from all possible view by a ruined warehouse on the north. Here, I thought was the ideal place for a long secret colloquy; so I guided my companion down the lane and picked out spots to sit in among the mossy stones. The air of death and desertion was ghoulish, and the smell of fish almost insufferable; but I was resolved to let nothing deter me.

About four hours remained for conversation if I were to catch the eight o'clock coach for Arkham, and I began to dole out more liquor to the ancient tippler; meanwhile eating my own frugal lunch. In my donations I was careful not to overshoot the mark, for I did not wish Zadok's vinous garrulousness to pass into a stupor. After an hour his furtive taciturnity shewed signs of disappearing, but much to my disappointment he still sidetracked my questions about Innsmouth and its shadow-haunted

past. He would babble of current topics, revealing a wide acquaintance with newspapers and a great tendency to philosophise in a sententious village fashion.

Toward the end of the second hour I feared my quart of whiskey would not be enough to produce results, and was wondering whether I had better leave old Zadok and go back for more. Just then, however, chance made the opening which my questions had been unable to make; and the wheezing ancient's rambling took a turn that caused me to lean forward and listen alertly. My back was toward the fishy-smelling sea, but he was facing it and something or other had caused his wandering gaze to light on the low, distant line of Devil Reef, then showing plainly and almost fascinatingly above the waves. The sight seemed to displease him, for he began a series of weak curses which ended in a confidential whisper and a knowing leer. He bent toward me, took hold of my coat lapel, and hissed out some hints that could not be mistaken.

"Thar's whar it all begun—that cursed place of all wickedness whar the deep water starts. Gate o' hell—sheer drop daown to a bottom no saoundin'-line kin tech. Ol' Cap'n Obed done it—him that faound aout more'n was good fer him in the Saouth Sea islands.

"Everybody was in a bad way them days. Trade fallin' off, mills losin' business—even the new ones—an' the best of our menfolks kilt

aprivateerin' in the War of 1812 or lost with the Elizy brig an' the Ranger scow—both on 'em Gilman venters. Obed Marsh he had three ships afloat—brigantine Columby, brig Hefty, an' barque Sumatry Queen. He was the only one as kep' on with the East-Injy an' Pacific trade, though Esdras Martin's barkentine Malay Bride made a venter as late as twenty-eight.

"Never was nobody like Cap'n Obed—old limb o' Satan! Heh, heh! I kin mind him a-tellin' abaout furren parts, an' callin' all the folks stupid for goin' to Christian meetin' an' bearin' their burdns meek an' lowly. Says they'd orter git better gods like some o' the folks in the Injies—gods as ud bring 'em good fishin' in return for their sacrifices, an' ud reely answer folks's prayers.

"Matt Eliot his fust mate, talked a lot too, only he was again' folks's doin' any heathen things. Told abaout an island east of Othaheite whar they was a lot o' stone ruins older'n anybody knew anying abaout, kind o' like them on Ponape, in the Carolines, but with carven's of faces that looked like the big statues on Easter Island. Thar was a little volcanic island near thar, too, whar they was other ruins with diff'rent carvin'—ruins all wore away like they'd ben under the sea onct, an' with picters of awful monsters all over 'em.

"Wal, Sir, Matt he says the natives anound thar had all the fish they cud ketch, an' sported bracelets

an' armlets an' head rigs made aout o' a queer kind o' gold an' covered with picters o' monsters jest like the ones carved over the ruins on the little island—sorter fish-like frogs or froglike fishes that was drawn in all kinds o' positions likes they was human bein's. Nobody cud get aout o' them whar they got all the stuff, an' all the other natives wondered haow they managed to find fish in plenty even when the very next island had lean pickin's. Matt he got to wonderon' too an' so did Cap'n Obed. Obed he notices, besides, that lots of the hn'some young folks ud drop aout o' sight fer good from year to year, an' that they wan't many old folks around. Also, he thinks some of the folks looked dinned queer even for Kanakys.

"It took Obed to git the truth aout o' them heathen. I dun't know haow he done it, but be begun by tradin' fer the gold-like things they wore. Ast'em whar they come from, an' ef they cud git more, an' finally wormed the story aout o' the old chief — Walakea, they called him. Nobody but Obed ud ever a believed the old yeller devil, but the Cap'n cud read folks like they was books. Heh, heh! Nobody never believes me naow when I tell'em, an' I dun't s'pose you will, young feller—though come to look at ye, ye hev kind o' got them sharp-readin' eyes like Obed had."

The old man's whisper grew fainter, and I found myself shuddering at the terrible and sincere

portentousness of his intonation, even though I knew his tale could be nothing but drunken phantasy.

"Wal, Sir, Obed he larnt that they's things on this arth as most folks never heerd about—an' wouldn't believe ef they did hear. It seems these Kanakys was sacrificin' heaps o' their young men an' maidens to some kind o' god-things that lived under the sea, an' gittin' all kinds o' favour in return. They met the things on the little islet with the queer ruins, an' it seems them awful picters o' frog-fish monsters was supposed to be picters o' these things. Mebbe they was the kind o' critters as got all the mermaid stories an' sech started.

"They had all kinds a' cities on the sea-bottom, an' this island was heaved up from thar. Seem they was some of the things alive in the stone buildin's when the island come up sudden to the surface. That's how the Kanakys got wind they was daown thar. Made sign-talk as soon as they got over bein' skeert, an' pieced up a bargain afore long.

"Them things liked human sacrifices. Had had'em ages afore, but lost track o' the upper world after a time. What they done to the victims it ain't fer me to say, an' I guess Obed wasn't none too sharp abaout askin'. But it was all right with the heathens, because they'd ben havin' a hard time an' was desp'rate abaout everything. They give a sarten number o' young folks to the sea-things twice every year—May-Eve an' Hallawe'en—reg'lar as

cud be. Also give some a' the carved knick-knacks they made. What the things agreed to give in return was plenty a' fish—they druv'em in from all over the sea—an' a few gold like things naow an' then.

"Wal, as I says, the natives met the things on the little volcanic islet—goin' thar in canoes with the sacrifices et cet'ry, and bringin' back any of the gold-like jools as was comin' to'em. At fust the things didn't never go onto the main island, but arter a time they come to want to. Seems they hankered arter mixin' with the folks, an' havin' j'int ceremonies on the big days—May-Eve an' Hallowe'en. Ye see, they was able to live both in ant aout o' water—what they call amphibians, I guess. The Kanakys told'em as haow folks from the other islands might wanta wipe'an out if they got wind o' their bein' thar, but they says they dun't keer much, because they cud wipe aout the hull brood o' humans ef they was willin' to bother—that is, any as didn't be, sarten signs sech as was used onct by the lost Old Ones, whoever they was. But not wantin' to bother, they'd lay low when anybody visited the island.

"When it come to matin' with them toad-lookin' fishes, the Kanakys kind o' balked, but finally they larnt something as put a new face on the matter. Seems that human folks has got a kind a' relation to sech water-beasts—that everything alive come aout o' the water onct an' only needs a little change to go back agin. Them

things told the Kanakys that ef they mixed bloods there'd be children as ud look human at fust, but later turn more'n more like the things, till finally they'd take to the water an' jine the main lot o' things daown har. An' this is the important part, young feller—they as turned into fish things an' went into the water wouldn't never die. Them things never died excep' they was kilt violent.

"Wal, Sir, it seems by the time Obed knowed them islanders they was all full o' fish blood from them deep water things. When they got old an' begun to shew it, they was kep' hid until they felt like takin' to the water an' quittin' the place. Some was more teched than others, an' some never did change quite enough to take to the water; but mosily they turned out jest the way them things said. Them as was born more like the things changed arly, but them as was nearly human sometimes stayed on the island till they was past seventy, though they'd usually go daown under for trial trips afore that. Folks as had took to the water gen'rally come back a good deal to visit, so's a man ud often be a'talkin' to his own five-times-great-grandfather who'd left the dry land a couple o' hundred years or so afore.

"Everybody got aout o' the idee o' dyin'—excep' in canoe wars with the other islanders, or as sacrifices to the sea-gods daown below, or from snakebite or plague or sharp gallopin' ailments or somethin' afore they cud

take to the water—but simply looked forrad to a kind o' change that wa'n't a bit horrible arter a while. They thought what they'd got was well wuth all they'd had to give up—an' I guess Obed kind o' come to think the same hisself when he'd chewed over old Walakea's story a bit. Walakea, though, was one of the few as hadn't got none of the fish blood—bein' of a royal line that intermarried with royal lines on other islands.

"Walakea he shewed Obed a lot o' rites an' incantations as had to do with the sea things, an' let him see some o' the folks in the village as had changed a lot from human shape. Somehaow or other, though, he never would let him see one of the reg'lar things from right aout o' the water. In the end he give him a funny kind o' thingumajig made aout o' lead or something, that he said ud bring up the fish things from any place in the water whar they might be a nest o' 'em. The idee was to drop it daown with the right kind o' prayers an' sech. Walakea allowed as the things was scattered all over the world, so's anybody that looked abaout cud find a nest an' bring 'em up ef they was wanted.

"Matt he didn't like this business at all, an' wanted Obed shud keep away from the island; but the Cap'n was sharp fer gain, an' faound he cud get them gold-like things so cheap it ud pay him to make a specialty of them. Things went on that way for years an' Obed got enough o' that gold-like stuff to make him start the

refinery in Waite's old run-daown fullin' mill. He didn't dass sell the pieces like they was, for folks ud be all the time askin' questions. All the same his crews ud get a piece an' dispose of it naow and then, even though they was swore to keep quiet; an' he let his women-folks wear some o' the pieces as was more human-like than most.

"Well, come abaout thuty-eight—when I was seven year' old—Obed he faound the island people all wiped aout between v'yages. Seems the other islanders had got wind o' what was goin' on, and had took matters into their own hands. S'pose they must a had, after all, them old magic signs as the sea things says was the only things they was afeard of. No tellin' what any o' them Kanakys will chance to git a holt of when the sea-bottom throws up some island with ruins older'n the deluge. Pious cusses, these was—they didn't leave nothin' standin' on either the main island or the little volcanic islet excep' what parts of the ruins was too big to knock daown. In some places they was little stoness strewed abaout—like charms—with somethin' on 'em like what ye call a swastika naowadays. Prob'ly them was the Old Ones' signs. Folks all wiped aout no trace o' no gold-like things an' none the nearby Kanakys ud breathe a word abaout the matter. Wouldn't even admit they'd ever ben any people on that island.

"That naturally hit Obed pretty hard, seein' as his normal trade was

doin' very poor. It hit the whole of Innsmouth, too, because in seafarint days what profited the master of a ship gen'lly profited the crew proportionate. Most of the folks araound the taown took the hard times kind o' sheep-like an' resigned, but they was in bad shape because the fishin' was peterin' aout an' the mills wan't doin' none too well.

"Then's the time Obed he begun a-cursin' at the folks fer bein' dull sheep an' prayin' to a Christian heaven as didn't help 'em none. He told 'em he'd knowed o' folks as prayed to gods that give somethin' ye reely need, an' says ef a good bunch o' men ud stand by him, he cud mebbe get a holt o' sarten paowers as ud bring plenty o' fish an' quite a bit of gold. O'course them as sarved on the Sumatry Queen, an' seed the island knowed what he meant, an' wa'n't none too anxious to get clost to sea-things like they'd heard tell on, but them as didn't know what 'twas all abaout got kind o' swayed by what Obed had to say, and begun to ast him what he cud do to sit 'em on the way to the faith as 'ud bring 'em results."

Here the old man faltered, mumbled, and lapsed into a moody and apprehensive silence; glancing nervously over his shoulder and then turning back to stare fascinatedly at the distant black reef. When I spoke to him he did not answer, so I knew I would have to let him finish the bottle. The insane yarn I was hearing interested me profoundly, for I

fancied there was contained within it a sort of crude allegory based upon the strangeness of Innsmouth and elaborated by an imagination at once creative and full of scraps of exotic legend. Not for a moment did I believe that the tale had any really substantial foundation; but none the less the account held a hint of genuine terror if only because it brought in references to strange jewels clearly akin to the malign tiara I had seen at Newburyport. Perhaps the ornaments had, after all, come from some strange island; and possibly the wild stories were lies of the bygone Obed himself rather than of this antique toper.

I handed Zadok the bottle, and he drained it to the last drop. It was curious how he could stand so much whiskey, for not even a trace of thickness had come into his high, wheezy voice. He licked the nose of the bottle and slipped it into his pocket, then beginning to nod and whisper softly to himself. I bent close to catch any articulate words he might utter, and thought I saw a sardonic smile behind the stained bushy whiskers. Yes—he was really forming words, and I could grasp a fair proportion of them.

"Poor Matt—Matt he allus was agin it—tried to line up the folks on his side, an' had long talks with the preachers—no use—they run the Congregational parson aout o' taown, an' the Methodist feller quit—never did see Resolved Babcock, the Baptist parson, agin—Wrath o'

Jehovy—I was a mighty little critter, but I heerd what I heerd an, seen what I seen—Dagon an' Ashtoreth—Belial an' Beelzebub—Golden Caff an' the idols o' Canaan an' the Philistines—Babylonish abominations—Mene, mene, tekem, upharsin—.”

He stopped again, and from the look in his watery blue eyes I feared he was close to a stupor after all. But when I gently shook his shoulder he turned on me with astonishing alertness and snapped out some more obscure phrases.

“Don't believe me, hey? Hey, heh, heh—then jest tell me, young feller, why Cap'n Obed an' twenty odd other folks used to row aout to Devil Reef in the dead o' night an' chant things so laoud ye cud hear 'em all over taown when the wind was right? Tell me that, hey? An' tell me why Obed was allus droppin' heavy things daown into the deep water t'other side o' the reef whar the bottom shoots daown like a cliff lower'n ye kin saound? Tell me what he done with that funny-shaped lead thingumajig as Walakea give him? Hey, boy? An' what did they all haowl on May-Eve, an, agin the next Hallowe'en? An' why'd the new church parsons—fellers as used to be sailors—wear them queer robes an' cover their-selves with them gold-like things Obed brung? Hey?”

The watery blue eyes were almost savage and maniacal now, and the dirty white beard bristled electrically. Old Zadok probably saw me

shrink back, for he began to cackle evilly.

“Heh, heh, heh, heh! Beginni'n to see hey? Mebbe ye'd like to a ben me in them days, when I seed things at night aout to sea from the cupalo top o' my haouse. Oh, I kin tell ye' little pitchers hev big ears, an' I wa'n't missin' nothin' o' what was gossiped abaout Cap'n Obed an' the folks aout to the reef! Heh, heh, heh! Haow abaout the night I took my pa's ship's glass up to the cupalo an' seed the reef a-bristlin' thick with shapes that dove off quick soon's the moon riz?

“Obed an' the folks was in a dory, but them shapes dove off the far side into the deep water an' never come up...

“Haow'd ye like to be a little shaver alone up in a cupola a-watchin' shapes as wa'n't human shapes?... Heh?... Heh, heh, heh...”

The old man was getting hysterical, and I began to shiver with a nameless alarm. He laid a gnarled claw on my shoulder, and it seemed to me that its shaking was not altogether that of mirth.

“S'pose one night ye seed some-thin' heavy heaved offen Obed's dory beyond the reef—and then learned next day a young feller was missin' from home. Hey! Did anybody ever see hide or hair o' Hiram Gilman agin? Did they? An' Nick Pierce, an' Luelly Waite, an' Adoniram Saouthwick, an' Henry Garrison. Hey? Heh, heh, heh, heh... Shapes talkin' sign language with their hands... them as had reel hands...

“Wal, Sir, that was the time Obed begun to git on his feet agin. Folks see his three darters a-wearin' gold-like things as nobody'd never see on 'em afore, an' smoke stared comin' aout o' the refin'ry chimblly. Other folks was prosp'rin, too—fish begun to swarm into the harbour fit to kill, an' heaven knows what sized cargoes we begun to ship aout to Newb'ryport, Arkham, an' Boston. T'was then Obed got the ol' branch railrud put through. Some Kingsport fishermen heerd abaout the ketch an' come up in sloops, but they was all lost. Nobody never see 'em agin. An' jest then our folk organised the Esoteric Order o' Dagon, an' bought Masonic Hall offen Calvary Commandery for it... heh, heh, heh! Matt Eliot was a Mason an' agin the sellin', but he dropped aout o' sight jest then.

“Remember, I ain't sayin' Obed was set on hevin' things jest like they was on that Kanaky isle. I dun't think he aimed at fust to do no mixin', nor raise no younguns to take to the water an' turn into fishes with eternal life. He wanted them gold things, an' was willin' to pay heavy, an' I guess the others was satisfied fer a while...

“Come in' forty-six the taown done some lookin' an' thinkin' fer itself. Too many folks missin'—too much wild preachin' at meetin' of a Sunday—too much talk abaout that reef. I guess I done a bit by tellin' Selectman Mowry what I see from the cupalo. They was a party one night as follered Obed's crawd aout

to the reef, an' I heerd shots betwixt the dories. Nex' day Obed and thutty-two others was in gaol, with everybody a-wonderin' jest what was afoot and jest what charge agin 'em cud he get to holt. God, ef anybody'd look'd ahead... a couple o' weeks later, when nothin' had ben throwed into the sea fer thet long...”

Zadok was shewing signs of fright and exhaustion, and I let him keep silence for a while, though glancing apprehensively at my watch. The tide had turned and was coming in now, and the sound of the waves seemed to arouse him. I was glad of that tide, for at high water the fishy smell might not be so bad. Again I strained to catch his whispers.

“That awful night... I seed 'em. I was up in the cupalo... hordes of 'em... swarms of 'em... all over the reef an' swimmin' up the harbour into the Manuxet... God, what happened in the streets of Innsmouth that night... they rattled our door, but pa wouldn't open... then he clumb aout the kitchen winder with his musket to find Selecman Mowry an' see what he cud do... Maounds o' the dead an' the dyin'... shots and screams... shaoutin' in Ol Squar an' Taown Squar an' New Church Green—gaol throwed open...—proclamation... treason... called it the plague when folks come in an' faoud haff our people missin'... nobody left but them as ud jine in with Obed an' them things or else keep quiet... never heard o' my pa no more...”

The old man was panting and

perspiring profusely. His grip on my shoulder tightened.

"Everything cleaned up in the mornin'—but they was traces... Obed he kinder takes charge an' says things is goin' to be changed... others'll worship with us at meetin'-time, an' sarten haouses hez got to entertin guests... they wanted to mix like they done with the Kanakys, an' he for one didn't feel baound to stop 'em. Far gone, was Obed... jest like a crazy man on the subjeck. He says they brung us fish an' treasure, an' shud hev what they hankered after..."

"Nothin' was to be diff'runt on the aoutsid; only we was to keep shy o' strangers ef we knowed what was good fer us.

"We all hed to take the Oath o' Dagon, an' later on they was secon' an' third oaths that some o' us took. Them as ud help special, ud git special rewards—gold an' sech—No use balkin', fer they was millions of 'em daown thar. They'd ruther not start risin' an' wipin' aout human-kind, but ef they was gave away an' forced to, they cud do a lot toward jest that. We didn't hev them old charms to cut 'em off like folks in the Saouth Sea did, an' them Kanakys wudu't never give away their secrets.

"Yield up enough sacrifices an' savage knick-knacks an' harbourage in the taown when they wanted it, an' they'd let well enough alone. Wudn't bother no strangers as might bear tales aoutside—that is, withaout they got pryin'. All in the band of the faithful—Order o' Dagon—an'

the children shud never die, but go back to the Mother Hydra an' Father Dagon what we all come from onct... Ia! Ia! Cthulhu fhtagn! Ph'nglui mglw'nafh Cthulhu R'lyeh wgah-nagl fhtaga—"

Old Zadok was fast lapsing into stark raving, and I held my breath. Poor old soul—to what pitiful depths of hallucination had his liquor, plus his hatred of the decay, alienage, and disease around him, brought that fertile, imaginative brain? He began to moan now, and tears were coursing down his channelled cheeks into the depths of his beard.

"God, what I seen senct I was fifteen year' old—Mene, mene, tekell, upharsin!—the folks as was missin', and them as kilt theirselves—them as told things in Arkham or Ipswich or sech places was all called crazy, like you're callin' me right naow—but God, what I seen—they'd a kilt me long ago fer' what I know, only I'd took the fust an' secon' Oaths o' Dagon offen Obed, so was pertected unlesen a jury of 'em proved I told things knowin' an' delib'rit... but I wudn't take the third Oath—I'd a died ruther'n take that—

"It got wuss araound Civil War time, when children born senct 'forty-six begun to grow up—some 'em, that is. I was afeared—never did no pryin' arter that awful night, an' never see one o'—them—clost to in all my life. That is, never no full-blooded one. I went to the war, an' ef I'd a had any guts or sense I'd a never come back, but settled away

from here. But folks wrote me things wa'n't so bad. That, I s'pose, was because gov'munt draft men was in taown arter 'sixty-three. Arter the war it was jest as bad agin. People begun to fall off—mills an' shops shet daown—shippin' stopped an' the harbour choked up—railrud give up—but they... they never stopped swimmin' in an' aout o' the river from that cursed reef o' Satan—an' more an' more attic winders got a-boarded up, an' more an' more noises was heerd in haouses as wa'n't s'posed to hev nobody in 'em...

"Folks aoutside hev their stories abaout us—s'pose you've heerd a plenty on 'em, seein' what questions ye ast—stories abaout things they've seed naow an' then, an' abaout that queer joolry as still comes in from somewhars an' ain't quite all melted up—but nothin' never gits def'nite. Nobody'll believe nothin'. They call them gold-like things pirate loot, an' allaow the Innsmouth folks hez furren blood or is dis-tempered or somethin'. Beside, them that lives here shoo off as many strangers as they kin, an' encourage the rest not to git very cur'ous, specially raound night time. Beasts balk at the critters—hosses wuss'n mules—but when they got autos that was all right.

"In 'forty-six Cap'n Obed took a second wife that nobody in the taown never see—some says he didn't want to, but was made to by them as he'd called in—had three children by her—two as disappeared

young, but one gal as looked like anybody else an' was eddicated in Europe. Obed finally got her married off by a trick to an Arkham feller as didn't suspect nothin'. But nobody aoutside'll hav nothin' to do with Innsmouth folks naow. Barnabas Marsh that runs the refin'ry now is Obed's grandson by his fust wife—son of Onesiphorus, his eldest son, but his mother was another o' them as wa'n't never seen aoutdoors.

"Right naow Barnabas is abaout changed. Can't shet his eyes no more, an' is all aout o' shape. They say he still wears clothes, but he'll take to the water soon. Mebbe he's tried it already—they do sometimes go daown for little spells afore they go daown for good. Ain't ben seed abaout in public fer nigh on ten year'. Dun't know haow his poor wife kin feel—she come from Ipiwich, an' they nigh lynched Barnabas when he courted her fifty odd year' ago. Obed he died in 'seventy-eight an' all the next gen'ration is gone naow—the fust wife's children dead, and the rest... God knows..."

The sound of the incoming tide was now very insistent, and little by little it seemed to change the old man's mood from maudlin tearfulness to watchful fear. He would pause now and then to renew those nervous glances over his shoulder or out toward the reef, and despite the wild absurdity of his tale, I could not help beginning to share his apprehensiveness. Zadok now grew shriller, seemed to be trying to whip

up his courage with louder speech.

"Hey, yew, why dun't ye say somethin'? Haow'd ye like to be livin' in a taown like this, with everything a-rottin' an' dyin', an' boarded-up monsters crawlin' an' bleatin' an' barkin' an' hoppin' araoun' black cellars an' attics every way ye turn? Hey? Haow'd ye like to hear the haowlin' night arter night from the churches an' Order o' Dagon Hall, an' know what's doin' part o' the haowlin'? Haow'd ye like to hear what comes from that awful reef every May-Eve an' Hallowmass? Hey? Think the old man's crazy, eh? Wal, Sir, let me tell ye that ain't the wust!"

Zadok was really screaming now, and the mad frenzy of his voice disturbed me more than I care to own.

"Curse ye, dun't set thar a'starin' at me with them eyes—I tell Obed Marsh he's in hell, an, hez got to stay thar! Heh, heh... in hell, I says! Can't git me—I hain't done nothin' nor told nobody nothin'—"

"Oh, you, young feller? Wal, even ef I hain't told nobody nothin' yet, I'm a'goin' to naow! Yew jest set still an' listen to me, boy—this is what I ain't never told nobody... I says I didn't get to do pryin' arter that night—but I faound things about jest the same!"

"Yew want to know what the reel horror is, hey? Wal, it's this—it ain't what them fish devils hez done, but what they're a-goin' to do! They're a-bringin' things up aout o'

whar they come from into the taown—been doin' it fer years, an' slackenin' up lately. Them haouses north o' the river be-twixt Water an' Main Streets is full of 'em—them devils an' what they brung—an' when they git ready... I say, when they git... ever hear tell of a shoggoth?

"Hey, d'ye hear me? I tell ye I know what them things be—I seen 'em one night when... eh-ahhh-ah! e'yahhh..."

The hideous suddenness and inhuman frightfulness of the old man's shriek almost made me faint. His eyes, looking past me toward the malodorous sea, were positively starting from his head; while his face was a mask of fear worthy of Greek tragedy. His bony claw dug monstrously into my shoulder, and he made no motion as I turned my head to look at whatever he had glimpsed.

There was nothing that I could see. Only the incoming tide, with perhaps one set of ripples more local than the long-flung line of breakers. But now Zadok was shaking me, and I turned back to watch the melting of that fear-frozen face into a chaos of twitching eyelids and mumbling gums. Presently his voice came back—albeit as a trembling whisper.

"Git aout o' here! Get aout o' here! They seen us—git aout fer your life! Dun't wait fer nothin'—they know naow—Run fer it—quick—aout o' this taown—"

Another heavy wave dashed against the loosing masonry of the

bygone wharf, and changed the mad ancient's whisper to another inhuman and blood-curdling scream. "E-yaahhhh!... Yheaaaaaa!..."

Before I could recover my scattered wits he had relaxed his clutch on my shoulder and dashed wildly inland toward the street, reeling northward around the ruined warehouse wall.

I glanced back at the sea, but there was nothing there. And when I reached Water Street and looked along it toward the north there was no remaining trace of Zadok Allen.

I can hardly describe the mood in which I was left by this harrowing episode—an episode at once mad and pitiful, grotesque and terrifying. The grocery boy had prepared me for it, yet the reality left me none the less bewildered and disturbed. Puerile though the story was, old Zadok's insane earnestness and horror had communicated to me a mounting unrest which joined with my earlier sense of loathing for the town and its blight of intangible shadow.

Later I might sift the tale and extract some nucleus of historic allegory; just now I wished to put it out of my head. The hour grown perilously late—my watch said 7:15, and the Arkham bus left Town Square at eight—so I tried to give my thoughts as neutral and practical a cast as possible, meanwhile walking rapidly through the deserted streets of gaping roofs and leaning houses

toward the hotel where I had checked my valise and would find my bus.

Though the golden light of late afternoon gave the ancient roofs and decrepit chimneys an air of mystic loveliness and peace, I could not help glancing over my shoulder now and then. I would surely be very glad to get out of malodorous and fear-shadowed Innsmouth, and wished there were some other vehicle than the bus driven by that sinister-looking fellow Sargent. Yet I did not hurry too precipitately, for there were architectural details worth viewing at every silent corner; and I could easily, I calculated, cover the necessary distance in a half-hour.

Studying the grocery youth's map and seeking a route I had not traversed before, I chose Marsh Street instead of State for my approach to Town Square. Near the corner of Fall street I began to see scattered groups of furtive whisperers, and when I finally reached the Square I saw that almost all the loiterers were congregated around the door of the Gilman House. It seemed as if many bulging, watery, unwinking eyes looked oddly at me as I claimed my valise in the lobby, and I hoped that none of these unpleasant creatures would be my fellow-passengers on the coach.

The bus, rather early, rattled in with three passengers somewhat before eight, and an evil-looking fellow on the sidewalk muttered a few indistinguishable words to the driver. Sargent threw out a mail-bag

and a roll of newspapers, and entered the hotel; while the passengers—the same men whom I had seen arriving in Newburyport that morning—shambled to the sidewalk and exchanged some faint guttural words with a loafer in a language I could have sworn was not English. I boarded the empty coach and took the seat I had taken before, but was hardly settled before Sargent re-appeared and began mumbling in a throaty voice of peculiar repulsiveness.

I was, it appeared, in very bad luck. There had been something wrong with the engine, despite the excellent time made from Newburyport, and the bus could not complete the journey to Arkham. No, it could not possibly be repaired that night, nor was there any other way of getting transportation out of Innsmouth either to Arkham or elsewhere. Sargent was sorry, but I would have to stop over at the Gilman. Probably the clerk would make the price easy for me, but there was nothing else to do.

Almost dazed by this sudden obstacle, and violently dreading the fall of night in this decaying and half-unlighted town, I left the bus and reentered the hotel lobby; where the sullen queer-looking night clerk told me I could have Room 428 on next the top floor—large, but without running water—for a dollar.

Despite what I had heard of this hotel in Newburyport, I signed the register, paid my dollar, let the clerk

take my valise, and followed that sour, solitary attendant up three creaking flights of stairs past dusty corridors which seemed wholly devoid of life. My room was a dismal rear one with two windows and bare, cheap furnishings. It overlooked a dingy court-yard otherwise hemmed in by low, deserted brick blocks, and commanded a view of decrepit westward-stretching roofs with a marshy countryside beyond. At the end of the corridor was a bathroom—a discouraging relique with ancient marble bowl, tin tub, faint electric light, and musty wooded paneling around all the plumbing fixtures.

It being still daylight, I descended to the Square and looked around for a dinner of some sort; noticing as I did so the strange glances I received from the unwholesome loafers. Since the grocery was closed, I was forced to patronise the restaurant I had shunned before; a stooped, narrow-headed man with staring, unwinking eyes, and a flat-nosed wench with unbelievably thick, clumsy hands being in attendance. The service was all of the counter type, and it relieved me to find that much was evidently served from cans and packages. A bowl of vegetable soup with crackers was enough for me, and I soon headed back for my cheerless room at the Gilman; getting a evening paper and a fly-specked magazine from the evil-visaged clerk at the rickety stand beside his desk.

As twilight deepened I turned

on the one feeble electric bulb over the cheap, iron-framed bed, and tried as best I could to continue the reading I had begun. I felt it advisable to keep my mind wholesomely occupied, for it would not do to brood over the abnormalities of this ancient, blight-shadowed town while I was still within its borders. The insane yarn I had heard from the aged drunkard did not promise very pleasant dreams, and I felt I must keep the image of his wild, watery eyes as far as possible from my imagination.

Also, I must not dwell on what that factory inspector had told the Newburyport ticket-agent about the Gilman House and the voices of its nocturnal tenants—not on that, nor on the face beneath the tiara in the black church doorway; the face for whose horror my conscious mind could not account. It would perhaps have been easier to keep my thoughts from disturbing topics had the room not been so gruesomely musty. As it was, the lethal mustiness blended hideously with the town's general fishy odour and persistently focussed one's fancy on death and decay.

Another thing that disturbed me was the absence of a bolt on the door of my room. One had been there, as marks clearly shewed, but there were signs of recent removal. No doubt it had been out of order, like so many other things in this decrepit edifice. In my nervousness I looked around and discovered a bolt on the clothes press which

seemed to be of the same size, judging from the marks, as the one formerly on the door. To gain a partial relief from the general tension I busied myself by transferring this hardware to the vacant place with the aid of a handy three-in-one device including a screwdriver which I kept on my key-ring. The bolt fitted perfectly, and I was somewhat relieved when I knew that I could shoot it firmly upon retiring. Not that I had any real apprehension of its need, but that any symbol of security was welcome in an environment of this kind. There were adequate bolts on the two lateral doors to connecting rooms, and these I proceeded to fasten.

I did not undress, but decided to read till I was sleepy and then lie down with only my coat, collar, and shoes off. Taking a pocket flash light from my valise, I placed it in my trousers, so that I could read my watch if I woke up later in the dark. Drowsiness, however, did not come; and when I stopped to analyse my thoughts I found to my disquiet that I was really unconsciously listening for something—listening for something which I dreaded but could not name. That inspector's story must have worked on my imagination more deeply than I had suspected. Again I tried to read, but found that I made no progress.

After a time I seemed to hear the stairs and corridors creak at intervals as if with footsteps, and wondered if the other rooms were

beginning to fill up. There were no voices, however, and it struck me that there was something subtly furtive about the creaking. I did not like it, and debated whether I had better try to sleep at all. This town had some queer people, and there had undoubtedly been several disappearances. Was this one of those inns where travelers were slain for their money? Surely I had no look of excessive prosperity. Or were the townsfolk really so resentful about curious visitors? Had my obvious sightseeing, with its frequent map-consultations, aroused unfavorable notice? It occurred to me that I must be in a highly nervous state to let a few random creakings set me off speculating in this fashion—but I regretted none the less that I was unarmed.

At length, feeling a fatigue which had nothing of drowsiness in it, I bolted the newly outfitted hall door, turned off the light, and threw myself down on the hard, uneven bed—coat, collar, shoes, and all. In the darkness every faint noise of the night seemed magnified, and a flood of doubly unpleasant thoughts swept over me. I was sorry I had put out the light, yet was too tired to rise and turn it on again. Then, after a long, dreary interval, and prefaced by a fresh creaking of stairs and corridor, there came that soft, damnably unmistakable sound which seemed like a malign fulfillment of all my apprehensions. Without the least shadow of a doubt,

the lock of my door was being tried—cautiously, furtively, tentatively—with a key.

My sensations upon recognising this sign of actual peril were perhaps less rather than more tumultuous because of my previous vague fears. I had been, albeit without definite reason, instinctively on my guard—and that was to my advantage in the new and real crisis, whatever it might turn out to be. Nevertheless the change in the menace from vague premonition to immediate reality was a profound shock, and fell upon me with the force of a genuine blow. It never once occurred to me that the fumbling might be a mere mistake. Malign purpose was all I could think of, and I kept deathly quiet, awaiting the would-be intruder's next move.

After a time the cautious rattling ceased, and I heard the room to the north entered with a pass key. Then the lock of the connecting door to my room was softly tried. The bolt held, of course, and I heard the floor creak as the prowler left the room. After a moment there came another soft rattling, and I knew that the room to the south of me was being entered. Again a furtive trying of a bolted connecting door, and again a receding creaking. This time the creaking went along the hall and down the stairs, so I knew that the prowler had realised the bolted condition of my doors and was giving up his attempt for a greater or lesser time, as the future would shew.

The readiness with which I fell into a plan of action proves that I must have been subconsciously fearing some menace and considering possible avenues of escape for hours. From the first I felt that the unseen fumbler meant a danger not to be met or dealt with, but only to be fled from as precipitately as possible. The one thing to do was to get out of that hotel alive as quickly as I could, and through some channel other than the front stairs and lobby.

Rising softly and throwing my flashlight on the switch, I sought to light the bulb over my bed in order to choose and pocket some belongings for a swift, valiseless flight. Nothing, however, happened; and I saw that the power had been cut off. Clearly, some cryptic, evil movement was afoot on a large scale—just what, I could not say. As I stood pondering with my hand on the now useless switch I heard a muffled creaking on the floor below, and thought I could barely distinguish voices in conversation. A moment later I felt less sure that the deeper sounds were voices, since the apparent hoarse barkings and loose-syllabled croakings bore so little resemblance to recognized human speech. Then I thought with renewed force of what the factory inspector had heard in the night in this mouldering and pestilential building.

Having filled my pockets with the flashlight's aid, I put on my hat and tiptoed to the windows to consider chances of descent. Despite

the state's safety regulations there was no fire escape on this side of the hotel, and I saw that my windows commanded only a sheer three story drop to the cobbled courtyard. On the right and left, however, some ancient brick business blocks abutted on the hotel; their slant roofs coming up to a reasonable jumping distance from my fourth-story level. To reach either of these lines of buildings I would have to be in a room two from my own—in one case on the north and in the other case on the south—and my mind instantly set to work out what chances I had of making the transfer.

I could not, I decided, risk an emergence into the corridor; where my footsteps would surely be heard, and where the difficulties of entering the desired room would be insuperable. My progress, if it was to be made at all, would have to be through the less solidly-built connecting doors of the rooms; the locks and bolts of which I would have to force violently, using my shoulder as a battering-ram whenever they were set against me. This, I thought, would be possible owing to the rickety nature of the house and its fixtures; but I realised I could not do it noiselessly. I would have to count on sheer speed, and the chance of getting to a window before any hostile forces became coordinated enough to open the right door toward me with a pass-key. My own outer door I reinforced by pushing the bureau against it—little by little,

in order to make a minimum of sound.

I perceived that my chances were very slender, and was fully prepared for any calamity. Even getting to another roof would not solve the problem for there would then remain the task of reaching the ground and escaping from the town. One thing in my favour was the deserted and ruinous state of the abutting building and the number of skylights gaping blackly open in each row.

Gathering from the grocery boy's map that the best route out of town was southward, I glanced first at the connecting door on the south side of the room. It was designed to open in my direction, hence I saw—after drawing the bolt and finding other fastening in place—it was not a favorable one for forcing. Accordingly abandoning it as a route, I cautiously moved the bedstead against it to hamper any attack which might be made on it later from the next room. The door on the north was hung to open away from me, and this—though a test proved it to be locked or bolted from the other side—I knew must be my route. If I could gain the roofs of the buildings in Paine Street and descend successfully to the ground level, I might perhaps dart through the courtyard and the adjacent or opposite building to Washington or Bates—or else emerge in Paine and edge around southward into Washington. In any case, I would aim to strike Washington somehow

and get quickly out of the Town Square region. My preference would be to avoid Paine, since the fire station there might be open all night.

As I thought of these things I looked out over the squalid sea of decaying roofs below me, now brightened by the beams of a moon not much past full. On the right the black gash of the river-gorge clove the panorama, abandoned factories and railway station clinging barnacle-like to its sides. Beyond it the rusted railway and the Rowley road led off through a flat marshy terrain dotted with islets of higher and dryer scrub-grown land. On the left the creek-threaded country-side was nearer, the narrow road to Ipswich gleaming white in the moonlight. I could not see from my side of the hotel the southward route toward Arkham which I had determined to take.

I was irresolutely speculating on when I had better attack the northward door, and on how I could least audibly manage it, when I noticed that the vague noises underfoot had given place to a fresh and heavier creaking of the stairs. A wavering flicker of light shewed through my transom, and the boards of the corridor began to groan with a ponderous load. Muffled sounds of possible vocal origin approached, and at length a firm knock came at my outer door.

For a moment I simply held my breath and waited. Eternities seemed to elapse, and the nauseous fishy

odour of my environment seemed to mount suddenly and spectacularly. Then the knocking was repeated—continuously, and with growing insistence. I knew that the time for action had come, and forthwith drew the bolt of the northward connecting door, bracing myself for the task of battering it open. The knocking waxed louder, and I hoped that its volume would cover the sound of my efforts. At last beginning my attempt, I lunged again and again at the thin paneling with my left shoulder, heedless of shock or pain. The door resisted even more than I expected, but I did not give in. And all the while the clamour at the outer door increased.

Finally the connecting door gave, but with such a crash that I knew those outside must have heard. Instantly the outside knocking became a violent battering, while keys sounded ominously in the hall doors of the rooms on both sides of me. Rushing through the newly opened connexion, I succeeded in bolting the northerly hall door before the lock could be turned; but even as I did so I heard the hall door of the third room—the one from whose window I had hoped to reach the roof below—being tried with a pass key.

For an instant I felt absolute despair, since my trapping in a chamber with no window egress seemed complete. A wave of almost abnormal horror swept over me, and invested with a terrible but

unexplainable singularity the flash-light-glimpsed dust prints made by the intruder who had lately tried my door from this room. Then, with a dazed automatism which persisted despite hopelessness, I made for the next connecting door and performed the blind motion of pushing at it in an effort to get through and—granting that fastenings might be as providentially intact as in this second room—bolt the hall door beyond before the lock could be turned from outside.

Sheer fortunate chance gave me my reprieve—for the connecting door before me was not only unlocked but actually ajar. In a second I was through, and had my right knee and shoulder against a hall door which was visibly opening inward. My pressure took the opener off guard, for the thing shut as I pushed, so that I could slip the well-conditioned bolt as I had done with the other door. As I gained this respite I heard the battering at the two other doors abate, while a confused clatter came from the connecting door I had shielded with the bedstead. Evidently the bulk of my assailants had entered the southerly room and were massing in a lateral attack. But at the same moment a pass key sounded in the next door to the north, and I knew that a nearer peril was at hand.

The northward connecting door was wide open, but there was no time to think about checking the already turning lock in the hall. All I could

do was to shut and bolt the open connecting door, as well as its mate on the opposite side—pushing a bedstead against the one and a bureau against the other, and moving a washstand in front of the hall door. I must, I saw, trust to such makeshift barriers to shield me till I could get out the window and on the roof of the Paine Street block. But even in this acute moment my chief horror was something apart from the immediate weakness of my defenses. I was shuddering because not one of my pursuers, despite some hideous panting, grunting, and subdued barkings at odd intervals, was uttering an unmuffled or intelligible vocal sound.

As I moved the furniture and rushed toward the windows I heard a frightful scurrying along the corridor toward the room north of me, and perceived that the southward battering had ceased. Plainly, most of my opponents were about to concentrate against the feeble connecting door which they knew must open directly on me. Outside, the moon played on the ridgepole of the block below, and I saw that the jump would be desperately hazardous because of the steep surface on which I must land.

Surveying the conditions, I chose the more southerly of the two windows as my avenue of escape; planning to land on the inner slope of the roof and make for the nearest sky-light. Once inside one of the decrepit brick structures I would

have to reckon with pursuit; but I hoped to descend and dodge in and out of yawning doorways along the shadowed courtyard, eventually getting to Washington Street and slipping out of town toward the south.

The clatter at the northerly connecting door was now terrific, and I saw that the weak panelling was beginning to splinter. Obviously, the besiegers had brought some ponderous object into play as a battering-ram. The bedstead, however, still held firm; so that I had at least a faint chance of making good my escape. As I opened the window I noticed that it was flanked by heavy velour draperies suspended from a pole by brass rings, and also that there was a large projecting catch for the shutters on the exterior. Seeing a possible means of avoiding the dangerous jump, I yanked at the hangings and brought them down, pole and all; then quickly hooking two of the rings in the shutter catch and flinging the drapery outside. The heavy folds reached fully to the abutting roof, and I saw that the rings and catch would be likely to bear my weight. So, climbing out of the window and down the improvised rope ladder, I left behind me forever the morbid and horror-infested fabric of the Gilman House.

I landed safely on the loose slates of the steep roof, and succeeded in gaining the gaping black skylight without a slip. Glancing up at the window I had left, I observed it was

still dark, though far across the crumbling chimneys to the north I could see lights ominously blazing in the Order of Dagon Hall, the Baptist church, and the Congregational church which I recalled so shiveringly. There had seemed to be no one in the courtyard below, and I hoped there would be a chance to get away before the spreading of a general alarm. Flashing my pocket lamp into the skylight, I saw that there were no steps down. The distance was slight, however, so I clambered over the brink and dropped; striking a dusty floor littered with crumbling boxes and barrels.

The place was ghoulish-looking, but I was past minding such impressions and made at once for the staircase revealed by my flashlight—after a hasty glance at my watch, which shewed the hour to be 2 a.m. The steps creaked, but seemed tolerably sound; and I raced down past a barn-like second storey to the ground floor. The desolation was complete, and only echoes answered my footfalls. At length I reached the lower hall at the end of which I saw a faint luminous rectangle marking the ruined Paine Street doorway. Heading the other way, I found the back door also open; and darted out and down five stone steps to the grass-grown cobblestones of the courtyard.

The moonbeams did not reach down here, but I could just see my way about without using the

flashlight. Some of the windows on the Gilman House side were faintly glowing, and I thought I heard confused sounds within. Walking softly over to the Washington Street side I perceived several open doorways, and chose the nearest as my route out. The hallway inside was black, and when I reached the opposite end I saw that the street door was wedged immovably shut. Resolved to try another building, I groped my way back toward the courtyard, but stopped short when close to the doorway.

For out of an opened door in the Gilman House a large crowd of doubtful shapes was pouring—lanterns bobbing in the darkness, and horrible croaking voices exchanging low cries in what was certainly not English. The figures moved uncertainly, and I realized to my relief that they did not know where I had gone; but for all that they sent a shiver of horror through my frame. Their features were indistinguishable, but their crouching, shambling gait was abominably repellent. And worst of all, I perceived that one figure was strangely robed, and unmistakably surmounted by a tall tiara of a design altogether too familiar. As the figures spread throughout the courtyard, I felt my fears increase. Suppose I could find no egress from this building on the street side? The fishy odour was detestable, and I wondered I could stand it without fainting. Again groping toward the street, I

opened a door off the hall and came upon an empty room with closely shuttered but sashless windows. Fumbling in the rays of my flashlight, I found I could open the shutters; and in another moment had climbed outside and was fully closing the aperture in its original manner.

I was now in Washington Street, and for the moment saw no living thing nor any light save that of the moon. From several directions in the distance, however, I could hear the sound of hoarse voices, of footsteps, and of a curious kind of pattering which did not sound quite like footsteps. Plainly I had no time to lose. The points of the compass were clear to me, and I was glad that all the street lights were turned off, as is often the custom on strongly moonlit nights in prosperous rural regions. Some of the sounds came from the south, yet I retained my design of escaping in that direction. There would, I knew, be plenty of deserted doorways to shelter me in case I met any person or group who looked like pursuers.

I walked rapidly, softly, and close to the ruined houses. While hatless and dishevelled after my arduous climb, I did not look especially noticeable; and stood a good chance of passing unheeded if forced to encounter any casual wayfarer.

At Bates Street I drew into a yawning vestibule while two shambling figures crossed in front of me, but was soon on my way again and approaching the open space where

Eliot Street obliquely crosses Washington at the intersection of South. Though I had never seen this space, it had looked dangerous to me on the grocery youth's map; since the moonlight would have free play there. There was no use trying to evade it, for any alternative course would involve detours of possibly disastrous visibility and delaying effect. The only thing to do was to cross it boldly and openly; imitating the typical shambling of the Innsmouth folk as best I could, and trusting that no one—or at least no pursuer of mine—would be there.

Just how fully the pursuit was organised—and indeed, just what its purpose might be—I could form no idea. There seemed to be unusual activity in the town, but I judged that the news of my escape from the Gilman had not yet spread. I would, of course, soon have to shift from Washington to some other southward street; for that party from the hotel would doubtless be after me. I must have left dust prints in that last old building, revealing how I had gained the street.

The open space was, as I had expected, strongly moonlit; and I saw the remains of a parklike, iron-railed green in its center. Fortunately no one was about though a curious sort of buzz or roar seemed to be increasing in the direction of Town Square. South Street was very wide, leading directly down a slight declivity to the waterfront and commanding a long view out a sea;

and I hoped that no one would be glancing up it from afar as I crossed in the bright moonlight.

My progress was unimpeded, and no fresh sound arose to hint that I had been spied. Glancing about me, I involuntarily let my pace slacken for a second to take in the sight of the sea, gorgeous in the burning moonlight at the street's end. Far out beyond the breakwater was the dim, dark line of Devil Reef, and as I glimpsed it I could not help thinking of all the hideous legends I had heard in the last twenty-four hours—legends which portrayed this ragged rock as a veritable gateway to realms of unfathomed horror and inconceivable abnormality.

Then, without warning, I saw the intermittent flashes of light on the distant reef. They were definite and unmistakable, and awaked in my mind a blind horror beyond all rational proportion. My muscles tightened for panic flight, held in only by a certain unconscious caution and half-hypnotic fascination. And to make matters worse, there now flashed forth from the lofty cupola of the Gilman House, which loomed up to the northeast behind me, a series of analogous though differently spaced gleams which could be nothing less than an answering signal.

Controlling my muscles, and realising afresh how plainly visible I was, I resumed my brisker and feignedly shambling pace; though keeping my eyes on that hellish and

ominous reef as long as the opening of South Street gave me a seaward view. What the whole proceeding meant, I could not imagine; unless it involved some strange rite connected with Devil Reef, or unless some party had landed from a ship on that sinister rock. I now bent to the left around the ruinous green; still gazing toward the ocean as it blazed in the spectral summer moonlight, and watching the cryptical flashing of those nameless, unexplainable beacons.

It was then that the most horrible impression of all was borne in upon me—the impression which destroyed my last vestige of self-control and sent me running frantically southward past the yawning black doorways and fishily staring windows of that deserted nightmare street. For at a closer glance I saw that the moonlit waters between the reef and the shore were far from empty. They were alive with a teeming horde of shapes swimming inward toward the town; and even at my vast distance and in my single moment of perception I could tell that the bobbing heads and flailing arms were alien and aberrant in a way scarcely to be expressed or consciously formulated.

My frantic running ceased before I had covered a block, for at my left I began to hear something like the hue and cry of organised pursuit. There were footsteps and guttural sounds, and a rattling motor wheezed south along Federal Street.

In a second all my plans were utterly changed—for if the southward highway were blocked ahead of me, I must clearly find another egress from Innsmouth. I paused and drew into a gaping doorway, reflecting how lucky I was to have left the moonlit open space before these pursuers came down the parallel street.

A second reflection was less comforting. Since the pursuit was down another street, it was plain that the party was not following me directly. It had not seen me, but was simply obeying a general plan of cutting off my escape. This, however, implied that all roads leading out of Innsmouth were similarly patrolled; for the people could not have known what route I intended to take. If this were so, I would have to make my retreat across country away from any road; but how could I do that in view of the marshy and creek-riddled nature of all the surrounding region? For a moment my brain reeled—both from sheer hopelessness and from a rapid increase in the omnipresent fishy odour.

Then I thought of the abandoned railway to Rowley, whose solid line of ballasted, weed-grown earth still stretched off to the northwest from the crumbling station on the edge at the river-gorge. There was just a chance that the townsfolk would not think of that; since its briar-choked desertion made it half-impassable, and the unlikeliest of all avenues for a fugitive to choose.

I had seen it clearly from my hotel window and knew about how it lay. Most of its earlier length was uncomfortably visible from the Rowley road, and from high places in the town itself; but one could perhaps crawl inconspicuously through the undergrowth. At any rate, it would form my only chance of deliverance, and there was nothing to do but try it.

Drawing inside the hall of my deserted shelter, I once more consulted the grocery boy's map with the aid of the flashlight. The immediate problem was how to reach the ancient railway; and I now saw that the safest course was ahead to Babson Street; then west to Lafayette—there edging around but not crossing an open space homologous to the one I had traversed—and subsequently back northward and westward in a zigzagging line through Lafayette, Bates, Adam, and Bank streets—the latter skirting the river gorge—to the abandoned and dilapidated station I had seen from my window. My reason for going ahead to Babson was that I wished neither to recross the earlier open space nor to begin my westward course along a cross street as broad as South.

Starting once more, I crossed the street to the right-hand side in order to edge around into Babson as inconspicuously as possible. Noises still continued in Federal Street, and as I glanced behind me I thought I saw a gleam of light near the building

through which I had escaped. Anxious to leave Washington Street, I broke into a quiet dogtrot, trusting to luck not to encounter any observing eye. Next the corner of Babson Street I saw to my alarm that one of the houses was still inhabited, as attested by curtains at the window; but there were no lights within, and I passed it without disaster.

In Babson Street, which crossed Federal and might thus reveal me to the searchers, I clung as closely as possible to the sagging, uneven buildings; twice pausing in a doorway as the noises behind me momentarily increased. The open space ahead shone wide and desolate under the moon, but my route would not force me to cross it. During my second pause I began to detect a fresh distribution of vague sounds; and upon looking cautiously out from cover beheld a motor car darting across the open space, bound outward along Eliot Street, which there intersects both Babson and Lafayette.

As I watched—choked by a sudden rise in the fishy odour after a short abatement—I saw a band of uncouth, crouching shapes loping and shambling in the same direction; and knew that this must be the party guarding the Ipswich road, since that highway forms an extension of Eliot Street. Two of the figures I glimpsed were in voluminous robes, and one wore a peaked diadem which glistened whitely in the moonlight. The gait of this figure was so odd that it sent a chill through me—for it

seemed to me the creature was almost hopping.

When the last of the band was out of sight I resumed my progress; darting around the corner into Lafayette Street, and crossing Eliot very hurriedly lest stragglers of the party be still advancing along that thoroughfare. I did hear some croaking and clattering sounds far off toward Town Square, but accomplished the passage without disaster. My greatest dread was in re-crossing broad and moonlit South Street—with its seaward view—and I had to nerve myself for the ordeal. Someone might easily be looking, and possible Eliot Street stragglers could not fail to glimpse me from either of two points. At the last moment I decided I had better slacken my trot and make the crossing as before in the shambling gait of an average Innsmouth native.

When the view of the water again opened out—this time on my right—I was half-determined not to look at it at all. I could not however, resist; but cast a sidelong glance as I carefully and imitatively shambled toward the protecting shadows ahead. There was no ship visible, as I had half-expected there would be. Instead, the first thing which caught my eye was a small rowboat pulling in toward the abandoned wharves and laden with some bulky, tarpaulin-covered object. Its rowers, though distantly and indistinctly seen, were of an especially repellent aspect. Several swimmers were still

discernible; while on the far black reef I could see a faint, steady glow unlike the winking beacon visible before, and of a curious colour which I could not precisely identify. Above the slant roofs ahead and to the right there loomed the tall cupola of the Gilman House, but it was completely dark. The fishy odour, dispelled for a moment by some merciful breeze, now closed in again with maddening intensity.

I had not quite crossed the street when I heard a muttering band advancing along Washington from the north. As they reached the broad open space where I had had my first disquieting glimpse of the moonlit water I could see them plainly only a block away—and was horrified by the bestial abnormality of their faces and the doglike sub-humanness of their crouching gait. One man moved in a positively simian way, with long arms frequently touching the ground; while another figure—robed and tiaraed—seemed to progress in an almost hopping fashion. I judged this party to be the one I had seen in the Gilman's courtyard—the one, therefore, most closely on my trail. As some of the figures turned to look in my direction I was transfixed with fright, yet managed to preserve the casual, shambling gait I had assumed. To this day I do not know whether they saw me or not. If they did, my stratagem must have deceived them, for they passed on across the moonlit space without varying their course—meanwhile

croaking and jabbering in some hateful guttural patois I could not identify.

Once more in shadow, I resumed my former dog-trot past the leaning and decrepit houses that stared blankly into the night. Having crossed to the western sidewalk I rounded the nearest corner into Bates Street where I kept close to the buildings on the southern side. I passed two houses shewing signs of habitation, one of which had faint lights in upper rooms, yet met with no obstacle. As I turned into Adams Street I felt measurably safer, but received a shock when a man reeled out of a black doorway directly in front of me. He proved, however, too hopelessly drunk to be a menace; so that I reached the dismal ruins of the Bank Street warehouses in safety.

No one was stirring in that dead street beside the river-gorge, and the roar of the waterfalls quite drowned my foot steps. It was a long dog-trot to the ruined station, and the great brick warehouse walls around me seemed somehow more terrifying than the fronts of private houses. At last I saw the ancient arcaded station—or what was left of it—and made directly for the tracks that started from its farther end.

The rails were rusty but mainly intact, and not more than half the ties had rotted away. Walking or running on such a surface was very difficult; but I did my best, and on the whole made very fair time. For some distance the line kept on along

the gorge's brink, but at length I reached the long covered bridge where it crossed the chasm at a dizzying height. The condition of this bridge would determine my next step. If humanly possible, I would use it; if not, I would have to risk more street wandering and take the nearest intact highway bridge.

The vast, barnlike length of the old bridge gleamed spectrally in the moonlight, and I saw that the ties were safe for at least a few feet within. Entering, I began to use my flashlight, and was almost knocked down by the cloud of bats that flapped past me. About half-way across there was a perilous gap in the ties which I feared for a moment would halt me; but in the end I risked a desperate jump which fortunately succeeded.

I was glad to see the moonlight again when I emerged from that macabre tunnel. The old tracks crossed River Street at grade, and at once veered off into a region increasingly rural and with less and less of Innsmouth's abhorrent fishy odour. Here the dense growth of weeds and briars hindered me and cruelly tore at my clothes, but I was none the less glad that they were there to give me concealment in case of peril. I knew that much of my route must be visible from the Rowley road.

The marshy region began very abruptly, with the single track on a low, grassy embankment where the weedy growth was somewhat thinner. Then came a sort of island of higher

ground, where the line passed through a shallow open cut choked with bushes and brambles. I was very glad of this partial shelter, since at this point the Rowley road was uncomfortably near according to my window view. At the end of the cut it would cross the track and swerve off to a safer distance; but meanwhile I must be exceedingly careful. I was by this time thankfully certain that the railway itself was not patrolled.

Just before entering the cut I glanced behind me, but saw no pursuer. The ancient spires and roofs of decaying Innsmouth gleamed lovely and ethereal in the magic yellow moonlight, and I thought of how they must have looked in the old days before the shadow fell. Then, as my gaze circled inland from the town, something less tranquil arrested my notice and held me immobile for a second.

What I saw—or fancied I saw—was a disturbing suggestion of undulant motion far to the south; a suggestion which made me conclude that a very large horde must be pouring out of the city along the level Ipswich road. The distance was great and I could distinguish nothing in detail; but I did not at all like the look of that moving column. It undulated too much, and glistened too brightly in the rays of the now westerling moon. There was a suggestion of sound, too, though the wind was blowing the other way—a suggestion of bestial scraping and bellowing even worse than the

muttering of the parties I had lately overheard.

All sorts of unpleasant conjectures crossed my mind. I thought of those very extreme Innsmouth types said to be hidden in crumbling, centuried warrens near the waterfront; I thought, too, of those nameless swimmers I had seen. Counting the parties so far glimpsed, as well as those presumably covering other roads, the number of my pursuers must be strangely large for a town as depopulated as Innsmouth.

Whence could come the dense personnel of such a column as I now beheld? Did those ancient, unplumbed warrens teem with a twisted, uncatalogued, and unsuspected life? Or had some unseen ship indeed landed a legion of unknown outsiders on that hellish reef? Who were they? Why were they here? And if such a column of them was scouring the Ipswich road, would the patrols on the other roads be likewise augmented?

I had entered the brush-grown cut and was struggling along at a very slow pace when that damnable fishy odour again waxed dominant. Had the wind suddenly changed eastward, so that it blew in from the sea and over the town? It must have, I concluded, since I now began to hear shocking guttural murmurs from that hitherto silent direction. There was another sound, too—a kind of wholesale, colossal flopping or pattering which somehow called up images of the most detestable

sort. It made me think illogically of that unpleasantly undulating column on the far-off Ipswich road.

And then both stench and sounds grew stronger, so that I paused shivering and grateful for the cut's protection. It was here, I recalled, that the Rowley road drew so close to the old railway before crossing westward and diverging. Something was coming along that road, and I must lie low till its passage and vanishment in the distance. Thank heaven these creatures employed no dogs for tracking—though perhaps that would have been impossible amidst the omnipresent regional odour. Crouched in the bushes of that sandy cleft I felt reasonably safe, even though I knew the searchers would have to cross the track in front of me not much more than a hundred yards away. I would be able to see them, but they could not, except by a malign miracle, see me.

All at once I began dreading to look at them as they passed. I saw the close moonlit space where they would surge by, and had curious thoughts about the irredeemable pollution of that space. They would perhaps be the worst of all Innsmouth types—something one would not care to remember.

The stench waxed overpowering, and the noises swelled to a bestial babel of croaking, baying and barking without the least suggestion of human speech. Were these indeed the voices of my pursuers? Did they

have dogs after all? So far I had seen none of the lower animals in Innsmouth. That flopping or pattering was monstrous—I could not look upon the degenerate creatures responsible for it. I would keep my eyes shut till the sound receded toward the west. The horde was very close now—air foul with their hoarse snarlings, and the ground almost shaking with their alien-rhythmed footfalls. My breath nearly ceased to come, and I put every ounce of will-power into the task of holding my eyelids down.

I am not even yet willing to say whether what followed was a hideous actuality or only a nightmare hallucination. The later action of the government, after my frantic appeals, would tend to confirm it as a monstrous truth; but could not an hallucination have been repeated under the quasi-hypnotic spell of that ancient, haunted, and shadowed town? Such places have strange properties, and the legacy of insane legend might well have acted on more than one human imagination amidst those dead, stench-cursed streets and huddles of rotting roofs and crumbling steeples. Is it not possible that the germ of an actual contagious madness lurks in the depths of that shadow over Innsmouth? Who can be sure of reality after hearing things like the tale of old Zadok Allen? The government men never found poor Zadok, and have no conjectures to make as to what became of him. Where does

madness leave off and reality begin? Is it possible that even my latest fear is sheer delusion?

But I must try to tell what I thought I saw that night under the mocking yellow moon—saw surging and hopping down the Rowley road in plain sight in front of me as I crouched among the wild brambles of that desolate railway cut. Of course my resolution to keep my eyes shut had failed. It was foredoomed to failure—for who could crouch blindly while a legion of croaking, baying entities of unknown source flopped noisomely past, scarcely more than a hundred yards away?

I thought I was prepared for the worst, and I really ought to have been prepared considering what I had seen before.

My other pursuers had been accursedly abnormal—so should I not have been ready to face a strengthening of the abnormal element; to look upon forms in which there was no mixture of the normal at all? I did not open my eyes until the raucous clamour came loudly from a point obviously straight ahead. Then I knew that a long section of them must be plainly in sight where the sides of the cut flattened out and the road crossed the track—and I could no longer keep myself from sampling whatever horror that leering yellow moon might have to shew.

It was the end, for whatever remains to me of life on the surface of this earth, of every vestige of

mental peace and confidence in the integrity of nature and of the human mind. Nothing that I could have imagined—nothing, even, that I could have gathered had I credited old Zadok's crazy tale in the most literal way—would be in any way comparable to the demoniac, blasphemous reality that I saw—or believe I saw. I have tried to hint what it was in order to postpone the horror of writing it down baldly. Can it be possible that this planet has actually spawned such things; that human eyes have truly seen, as objective flesh, what man has hitherto known only in febrile phantasy and tenuous legend?

And yet I saw them in a limitless stream—flopping, hopping, croaking, bleating—urging inhumanly through the spectral moonlight in a grotesque, malignant saraband of fantastic nightmare. And some of them had tall tiaras of that nameless whitish-gold metal... and some were strangely robed... and one, who led the way, was clad in a ghoulishly humped black coat and striped trousers, and had a man's felt hat perched on the shapeless thing that answered for a head.

I think their predominant colour was a greyish-green, though they had white bellies. They were mostly shiny and slippery, but the ridges of their backs were scaly. Their forms vaguely suggested the anthropoid, while their heads were the heads of fish, with prodigious bulging eyes that never closed. At the sides of

their necks were palpitating gills, and their long paws were webbed. They hopped irregularly, sometimes on two legs and sometimes on four. I was somehow glad that they had no more than four limbs. Their croaking, baying voices, clearly used for articulate speech, held all the dark shades of expression which their staring faces lacked.

But for all of their monstrousness they were not unfamiliar to me. I knew too well what they must be—for was not the memory of the evil tiara at Newburyport still fresh? They were the blasphemous fish-frogs of the nameless design—living and horrible—and as I saw them I knew also of what that humped, tiaraed priest in the black church basement had fearsomely reminded me. Their number was past guessing. It seemed to me that there were limitless swarms of them and certainly my momentary glimpse could have shewn only the least fraction. In another instant everything was blotted out by a merciful fit of fainting; the first I had ever had.

It was a gentle daylight rain that awakened me from my stupor in the brush-grown railway cut, and when I staggered out to the roadway ahead I saw no trace of any prints in the fresh mud. The fishy odour, too, was gone, Innsmouth's ruined roofs and toppling steeples loomed up greyly toward the southeast, but not a living creature did I spy in all the

desolate salt marshes around. My watch was still going, and told me that the hour was past noon.

The reality of what I had been through was highly uncertain in my mind, but I felt that something hideous lay in the background. I must get away from evil-shadowed Innsmouth—and accordingly I began to test my cramped, wearied powers of locomotion. Despite weakness, hunger, horror, and bewilderment I found myself after a time able to walk; so I started slowly along the muddy road to Rowley. Before evening I was in the village, getting a meal and providing myself with presentable clothes. I caught the night train to Arkham, and the next day talked long and earnestly with government officials there; a process I later repeated in Boston. With the main result of these colloquies the public is now familiar—and I wish, for normality's sake, there were nothing more to tell. Perhaps it is madness that is overtaking me—yet perhaps a greater horror—or a greater marvel—is reaching out.

As may well be imagined, I gave up most of the foreplanned features of the rest of my tour—the scenic, architectural, and antiquarian diversions on which I had counted so heavily. Nor did I dare look for that piece of strange jewelry said to be in the Miskatonic University Museum. I did, however, improve my stay in Arkham by collecting some genealogical notes I had long wished to possess; very rough and hasty data,

it is true, but capable of good use later on when I might have time to collate and codify them. The curator of the historical society there—Mr. B. Lapham Peabody—was very courteous about assisting me, and expressed unusual interest when I told him I was a grandson of Eliza Orne of Arkham, who was born in 1867 and had married James Williamson of Ohio at the age of seventeen.

It seemed that a maternal uncle of mine had been there many years before on a quest much like my own; and that my grandmother's family was a topic of some local curiosity. There had, Mr. Peabody said, been considerable discussion about the marriage of her father, Benjamin Orne, just after the Civil War; since the ancestry of the bride was peculiarly puzzling. That bride was understood to have been an orphaned Marsh of New Hampshire—a cousin of the Essex County Marshes—but her education had been in France and she knew very little of her family. A guardian had deposited funds in a Boston bank to maintain her and her French governess; but that guardian's name was unfamiliar to Arkham people, and in time he dropped out of sight, so that the governess assumed the role by court appointment. The Frenchwoman—now long dead—was very taciturn, and there were those who said she would have told more than she did.

But the most baffling thing was the inability of anyone to place the

recorded parents of the young woman—Enoch and Lydia (Meserve) Marsh—among the known families of New Hampshire. Possibly, many suggested, she was the natural daughter of some Marsh of prominence—she certainly had the true Marsh eyes. Most of the puzzling was done after her early death, which took place at the birth of my grandmother—her only child.

Having formed some disagreeable impressions connected with the name of Marsh, I did not welcome the news that it belonged on my own ancestral tree; nor was I pleased by Mr. Peabody's suggestion that I had the true Marsh eyes myself. However, I was grateful for data which I knew would prove valuable; and took copious notes and lists of book references regarding the well-documented Orne family.

I went directly home to Toledo from Boston, and later spent a month at Maumee recuperating from my ordeal. In September I entered Oberlin for my final year, and from then till the next June was busy with studies and other wholesome activities—reminded of the bygone terror only by occasional official visits from government men in connexion with the campaign which my pleas and evidence had started. Around the middle of July—just a year after the Innsmouth experience—I spent a week with my late mother's family in Cleveland; checking some of my new genealogical data with the various notes, traditions, and bits of

heirloom material in existence there, and seeing what kind of a connected chart I could construct.

I did not exactly relish this task, for the atmosphere of the Williamson home had always depressed me. There was a strain of morbidity there, and my mother had never encouraged my visiting her parents as a child, although she always welcomed her father when he came to Toledo. My Arkham-born grandmother had seemed strange and almost terrifying to me, and I do not think I grieved when she disappeared. I was eight years old then, and it was said that she had wandered off in grief after the suicide of my Uncle Douglas, her eldest son. He had shot himself after a trip to New England—the same trip, no doubt, which had caused him to be recalled at the Arkham Historical Society.

This uncle had resembled her, and I had never liked him either. Something about the staring, unwinking expression of both of them had given me a vague, unaccountable uneasiness. My mother and Uncle Walter had not looked like that. They were like their father, though poor little cousin Lawrence—Walter's son—had been an almost perfect duplicate of his grandmother before his condition took him to the permanent seclusion of a sanitarium at Canton. I had not seen him in four years, but my uncle once implied that his state, both mental and physical, was very bad. This worry had probably been a major cause of his

mother's death two years before.

My grandfather and his widowed son Walter now comprised the Cleveland household, but the memory of older times hung thickly over it. I still disliked the place, and tried to get my researches done as quickly as possible. Williamson records and traditions were supplied in abundance by my grandfather; though for Orne material I had to depend on my uncle Walter, who put at my disposal the contents of all his files, including notes, letters, cuttings, heirlooms, photographs, and miniatures.

It was in going over the letters and pictures on the Orne side that I began to acquire a kind of terror of my own ancestry. As I have said, my grandmother and Uncle Douglas had always disturbed me. Now, years after their passing, I gazed at their pictured faces with a measurably heightened feeling of repulsion and alienation. I could not at first understand the change, but gradually a horrible sort of comparison began to obtrude itself on my unconscious mind despite the steady refusal of my consciousness to admit even the least suspicion of it. It was clear that the typical expression of these faces now suggested something it had not suggested before—something which would bring stark panic if too openly thought of.

But the worst shock came when my uncle shewed me the Orne jewelry in a downtown safe deposit vault. Some of the items were

delicate and inspiring enough, but there was one box of strange old pieces descended from my mysterious great-grandmother which my uncle was almost reluctant to produce. They were, he said, of very grotesque and almost repulsive design, and had never to his knowledge been publicly worn; though my grandmother used to enjoy looking at them. Vague legends of bad luck clustered around them, and my great-grandmother's French governess had said they ought not to be worn in New England, though it would be quite safe to wear them in Europe.

As my uncle began slowly and grudgingly to unwrap the things he urged me not to be shocked by the strangeness and frequent hideousness of the designs. Artists and archaeologists who had seen them pronounced their workmanship superlatively and exotically exquisite, though no one seemed able to define their exact material or assign them to any specific art tradition. There were two armlets, a tiara, and a kind of pectoral; the latter having in high relief certain figures of almost unbearable extravagance.

During this description I had kept a tight rein on my emotions, but my face must have betrayed my mounting fears. My uncle looked concerned, and paused in his unwrapping to study my countenance. I motioned to him to continue, which he did with renewed signs of reluctance. He seemed to expect

some demonstration when the first piece—the tiara—became visible, but I doubt if he expected quite what actually happened. I did not expect it, either, for I thought I was thoroughly forewarned regarding what the jewelery would turn out to be. What I did was to faint silently away, just as I had done in that brier choked railway cut a year before.

From that day on my life has been a nightmare of brooding and apprehension nor do I know how much is hideous truth and how much madness. My great-grandmother had been a Marsh of unknown source whose husband lived in Arkham—and did not old Zadok say that the daughter of Obed Marsh by a monstrous mother was married to an Arkham man through a trick? What was it the ancient toper had muttered about the line of my eyes to Captain Obed's? In Arkham, too, the curator had told me I had the true Marsh eyes. Was Obed Marsh my own great-great-grandfather? Who—or what—then, was my great-great-grandmother?

But perhaps this was all madness. Those whitish-gold ornaments might easily have been bought from some Innsmouth sailor by the father of my great-grandmother, whoever he was. And that look in the staring-eyed faces of my grandmother and self-slain uncle might be sheer fancy on my part—sheer fancy, bolstered up by the Innsmouth

shadow which had so darkly coloured my imagination. But why had my uncle killed himself after an ancestral quest in New England?

For more than two years I fought off these reflections with partial success. My father secured me a place in an insurance office, and I buried myself in routine as deeply as possible.

In the winter of 1930–31, however, the dreams began. They were very sparse and insidious at first, but increased in frequency and vividness as the weeks went by. Great watery spaces opened out before me, and I seemed to wander through titanic sunken porticos and labyrinths of weedy cyclopean walls with grotesque fishes as my companions. Then the other shapes began to appear, filling me with nameless horror the moment I awoke. But during the dreams they did not horrify me at all—I was one with them; wearing their unhuman trappings, treading their aqueous ways, and praying monstrously at their evil sea-bottom temples.

There was much more than I could remember, but even what I did remember each morning would be enough to stamp me as a madman or a genius if ever I dared write it down. Some frightful influence, I felt, was seeking gradually to drag me out of the sane world of wholesome life into unnamable abysses of blackness and alienage; and the process told heavily on me. My health and appearance grew steadily

worse, till finally I was forced to give up my position and adopt the static, secluded life of an invalid. Some odd nervous affliction had me in its grip, and I found myself at times almost unable to shut my eyes.

It was then that I began to study the mirror with mounting alarm. The slow ravages of disease are not pleasant to watch, but in my case there was something subtler and more puzzling in the background. My father seemed to notice it, too, for he began looking at me curiously and almost affrightedly. What was taking place in me? Could it be that I was coming to resemble my grandmother and uncle Douglas?

One night I had a frightful dream in which I met my grandmother under the sea. She lived in a phosphorescent palace of many terraces, with gardens of strange leprous corals and grotesque brachiate efflorescences, and welcomed me with a warmth that may have been sardonic. She had changed—as those who take to the water change—and told me she had never died. Instead, she had gone to a spot her dead son had learned about, and had leaped to a realm whose wonders—destined for him as well—he had spurned with a smoking pistol. This was to be my realm, too—I could not escape it. I would never die, but would live with those who had lived since before man ever walked the earth.

I met also that which had been her grandmother. For eighty

thousand years Pth'thya-l'yi had lived in Y'ha-nthlei, and thither she had gone back after Obed Marsh was dead. Y'ha-nthlei was not destroyed when the upper-earth men shot death into the sea. It was hurt, but not destroyed. The Deep Ones could never be destroyed, even though the palaeogean magic of the forgotten Old Ones might sometimes check them. For the present they would rest; but some day, if they remembered, they would rise again for the tribute Great Cthulhu craved. It would be a city greater than Innsmouth next time. They had planned to spread, and had brought up that which would help them, but now they must wait once more. For bringing the upper-earth men's death I must do a penance, but that would not be heavy. This was the dream in which I saw a shoggoth for the first time, and the sight set me awake in a frenzy of screaming. That morning the mirror definitely told me I had acquired the Innsmouth look.

So far I have not shot myself as my uncle Douglas did. I bought an automatic and almost took the step, but certain dreams deterred me. The tense extremes of horror are lessening, and I feel queerly drawn toward the unknown sea-deeps instead of fearing them. I hear and do strange things in sleep, and awake with a kind of exaltation instead of terror. I do not believe I need to wait for the full change as most have waited. If I did, my father would

probably shut me up in a sanitarium as my poor little cousin is shut up. Stupendous and unheard-of splendours await me below, and I shall seek them soon. Iä-R'lyeh! Cthulhu fhtagn! Iä! Iä! No, I shall not shoot myself—I cannot be made to shoot myself!

I shall plan my cousin's escape from that Canton mad-house, and together we shall go to marvel-shadowed Innsmouth. We shall swim out to that brooding reef in the sea and dive down through black abysses to Cyclopean and many-columned Y'ha-nthlei, and in that lair of the Deep Ones we shall dwell amidst wonder and glory for ever.

1932:

GHOSTWRITER *of* GHOST TALES.

[RETURN TO TABLE OF CONTENTS]

Despite H.P. Lovecraft's crisis of confidence the previous year, early in 1932 he set to work on another novelette: "The Dreams in the Witch-House," one of his best creepy novelettes. This he sent out to his friends for critiques, and Derleith, who really ought to have known better, was a little too blunt in making one of his points. Lovecraft, once again shorn of his tentatively budding confidence, promptly gave up on the thing. Fortunately, Derleith, perhaps regretting his bluntness, talked Lovecraft into letting him copy the manuscript, which he then surreptitiously slipped to Farnsworth Wright at *Weird Tales*. Wright promptly contacted

Lovecraft and bought the story.

Meanwhile, Lovecraft's summer travels took him all the way to New Orleans this time on a visit to E. Hoffman Price and (he hoped) Robert E. Howard. There, he ran himself to the brink of exhaustion visiting writer friends and staying up all night talking about stories and plots. His journeys were cut short by the death of his aunt Lillian Clark.

Later that year, Lovecraft found a new ghostwriting client, Hazel Heald. He helped her produce three short magazine stories, which kept him busy for the rest of the year. Hazel was an attractive divorcee just half a dozen years younger than Lovecraft, and soon started getting interested in him romantically; but

when she tried to encourage him to make a move on her, he backed away, although he continued to work with her for some time afterward.

The DREAMS *in the* WITCH HOUSE.

[RETURN TO TABLE OF CONTENTS]

Whether the dreams brought on the fever or the fever brought on the dreams Walter Gilman did not know. Behind everything crouched the brooding, festering horror of the ancient town, and of the mouldy, unhallowed garret gable where he wrote and studied and wrestled with figures and formulae when he was not tossing on the meagre iron bed. His ears were growing sensitive to a preternatural and intolerable degree, and he had long ago stopped the cheap mantel clock whose ticking had come to seem like a thunder of artillery. At night the subtle stirring of the black city outside, the sinister scurrying of rats in the wormy partitions, and the creaking of hidden

timbers in the centuried house, were enough to give him a sense of strident pandemonium. The darkness always teemed with unexplained sound—and yet he sometimes shook with fear lest the noises he heard should subside and allow him to hear certain other fainter noises which he suspected were lurking behind them.

He was in the changeless, legend-haunted city of Arkham, with its clustering gambrel roofs that sway and sag over attics where witches hid from the King's men in the dark, olden years of the Province. Nor was any spot in that city more steeped in macabre memory than the gable room which harboured him—for it was this house and this room which had likewise harboured

old Keziah Mason, whose flight from Salem Gaol at the last no one was ever able to explain. That was in 1692—the gaoler had gone mad and babbled of a small white-fanged furry thing which scuttled out of Keziah’s cell, and not even Cotton Mather could explain the curves and angles smeared on the grey stone walls with some red, sticky fluid.

Possibly Gilman ought not to have studied so hard. Non-Euclidean calculus and quantum physics are enough to stretch any brain, and when one mixes them with folklore, and tries to trace a strange background of multi-dimensional reality behind the ghoulish hints of the Gothic tales and the wild whispers of the chimney-corner, one can hardly expect to be wholly free from mental tension. Gilman came from Haverhill, but it was only after he had entered college in Arkham that he began to connect his mathematics with the fantastic legends of elder magic. Something in the air of the hoary town worked obscurely on his imagination. The professors at Miskatonic had urged him to slacken up, and had voluntarily cut down his course at several points. Moreover, they had stopped him from consulting the dubious old books on forbidden secrets that were kept under lock and key in a vault at the university library. But all these precautions came late in the day, so that Gilman had some terrible hints from the dreaded *Necronomicon* of Abdul Alhazred, the fragmentary

Book of Eibon, and the suppressed *Unaussprechlichen Kulten* of von Junzt to correlate with his abstract formulae on the properties of space and the linkage of dimensions known and unknown.

He knew his room was in the old Witch-House—that, indeed, was why he had taken it. There was much in the Essex County records about Keziah Mason’s trial, and what she had admitted under pressure to the Court of Oyer and Terminer had fascinated Gilman beyond all reason. She had told Judge Hathorne of lines and curves that could be made to point out directions leading through the walls of space to other spaces beyond, and had implied that such lines and curves were frequently used at certain midnight meetings in the dark valley of the white stone beyond Meadow Hill and on the unpeopled island in the river. She had spoken also of the Black Man, of her oath, and of her new secret name of Nahab. Then she had drawn those devices on the walls of her cell and vanished.

Gilman believed strange things about Keziah, and had felt a queer thrill on learning that her dwelling was still standing after more than two hundred and thirty-five years. When he heard the hushed Arkham whispers about Keziah’s persistent presence in the old house and the narrow streets, about the irregular human tooth-marks left on certain sleepers in that and other houses, about the childish cries heard near

May-Eve, and Hallowmass, about the stench often noted in the old house’s attic just after those dreaded seasons, and about the small, furry, sharp-toothed thing which haunted the mouldering structure and the town and nuzzled people curiously in the black hours before dawn, he resolved to live in the place at any cost.

A room was easy to secure, for the house was unpopular, hard to rent, and long given over to cheap lodgings. Gilman could not have told what he expected to find there, but he knew he wanted to be in the building where some circumstance had more or less suddenly given a mediocre old woman of the Seventeenth Century an insight into mathematical depths perhaps beyond the utmost modern delvings of Planck, Heisenberg, Einstein, and de Sitter.

He studied the timber and plaster walls for traces of cryptic designs at every accessible spot where the paper had peeled, and within a week managed to get the eastern attic room where Keziah was held to have practised her spells. It had been vacant from the first—for no one had ever been willing to stay there long—but the Polish landlord had grown wary about renting it. Yet nothing whatever happened to Gilman till about the time of the fever. No ghostly Keziah flitted through the sombre halls and chambers, no small furry thing crept into his dismal eyrie to nuzzle him, and

no record of the witch’s incantations rewarded his constant search. Sometimes he would take walks through shadowy tangles of unpaved musty-smelling lanes where eldritch brown houses of unknown age leaned and tottered and leered mockingly through narrow, small-paned windows. Here he knew strange things had happened once, and there was a faint suggestion behind the surface that everything of that monstrous past might not—at least in the darkest, narrowest, and most intricately crooked alleys—have utterly perished. He also rowed out twice to the ill-regarded island in the river, and made a sketch of the singular angles described by the moss-grown rows of grey standing stones whose origin was so obscure and immemorial.

Gilman’s room was of good size but queerly irregular shape; the north wall slating perceptibly inward from the outer to the inner end, while the low ceiling slanted gently downward in the same direction. Aside from an obvious rat-hole and the signs of other stopped-up ones, there was no access—nor any appearance of a former avenue of access—to the space which must have existed between the slanting wall and the straight outer wall on the house’s north side, though a view from the exterior showed where a window had been boarded up at a very remote date. The loft above the ceiling—which must have had a slanting floor—was likewise inaccessible.

When Gilman climbed up a ladder to the cob-webbed level loft above the rest of the attic he found vestiges of a bygone aperture tightly and heavily covered with ancient planking and secured by the stout wooden pegs common in Colonial carpentry. No amount of persuasion, however, could induce the stolid landlord to let him investigate either of these two closed spaces.

As time wore along, his absorption in the irregular wall and ceiling of his room increased; for he began to read into the odd angles a mathematical significance which seemed to offer vague clues regarding their purpose. Old Keziah, he reflected, might have had excellent reasons for living in a room with peculiar angles; for was it not through certain angles that she claimed to have gone outside the boundaries of the world of space we know? His interest gradually veered away from the unplumbed voids beyond the slanting surfaces, since it now appeared that the purpose of those surfaces concerned the side he was on.

The touch of brain-fever and the dreams began early in February. For some time, apparently, the curious angles of Gilman's room had been having a strange, almost hypnotic effect on him; and as the bleak winter advanced he had found himself staring more and more intently at the corner where the down-slanting ceiling met the inward-slanting wall. About this period his inability to concentrate

on his formal studies worried him considerably, his apprehensions about the mid-year examinations being very acute. But the exaggerated sense of hearing was scarcely less annoying. Life had become an insistent and almost unendurable cacophony, and there was that constant, terrifying impression of other sounds—perhaps from regions beyond life—trembling on the very brink of audibility. So far as concrete noises went, the rats in the ancient partitions were the worst. Sometimes their scratching seemed not only furtive but deliberate. When it came from beyond the slanting north wall it was mixed with a sort of dry rattling; and when it came from the century-closed loft above the slanting ceiling Gilman always braced himself as if expecting some horror which only bided its time before descending to engulf him utterly.

The dreams were wholly beyond the pale of sanity, and Gilman felt that they must be a result, jointly, of his studies in mathematics and in folklore. He had been thinking too much about the vague regions which his formulae told him must lie beyond the three dimensions we know, and about the possibility that old Keziah Mason—guided by some influence past all conjecture—had actually found the gate to those regions. The yellowed county records containing her testimony and that of her accusers were so damnably suggestive of things beyond human

experience—and the descriptions of the darting little furry object which served as her familiar were so painfully realistic despite their incredible details.

That object—no larger than a good-sized rat and quaintly called by the townspeople “Brown Jenkin”—seemed to have been the fruit of a remarkable case of sympathetic herd-delusion, for in 1692 no less than eleven persons had testified to glimpsing it. There were recent rumours, too, with a baffling and disconcerting amount of agreement. Witnesses said it had long hair and the shape of a rat, but that its sharp-toothed, bearded face was evilly human while its paws were like tiny human hands. It took messages betwixt old Keziah and the devil, and was nursed on the witch's blood, which it sucked like a vampire. Its voice was a kind of loathsome titter, and it could speak all languages. Of all the bizarre monstrosities in Gilman's dreams, nothing filled him with greater panic and nausea than this blasphemous and diminutive hybrid, whose image flitted across his vision in a form a thousandfold more hateful than anything his waking mind had deduced from the ancient records and the modern whispers.

Gilman's dreams consisted largely in plunges through limitless abysses of inexplicably coloured twilight and bafflingly disordered sound; abysses whose material and gravitational properties, and whose

relation to his own entity, he could not even begin to explain. He did not walk or climb, fly or swim, crawl or wriggle; yet always experienced a mode of motion partly voluntary and partly involuntary. Of his own condition he could not well judge, for sight of his arms, legs, and torso seemed always cut off by some odd disarrangement of perspective; but he felt that his physical organization and faculties were somehow marvellously transmuted and obliquely projected—though not without a certain grotesque relationship to his normal proportions and properties.

The abysses were by no means vacant, being crowded with indescribably angled masses of alien-hued substance, some of which appeared to be organic while others seemed inorganic. A few of the organic objects tended to awake vague memories in the back of his mind, though he could form no conscious idea of what they mockingly resembled or suggested. In the later dreams he began to distinguish separate categories into which the organic objects appeared to be divided, and which seemed to involve in each case a radically different species of conduct-pattern and basic motivation. Of these categories one seemed to him to include objects slightly less illogical and irrelevant in their motions than the members of the other categories.

All the objects—organic and inorganic alike—were totally beyond description or even comprehension.

Gilman sometimes compared the inorganic matter to prisms, labyrinths, clusters of cubes and planes, and Cyclopean buildings; and the organic things struck him variously as groups of bubbles, octopi, centipedes, living Hindoo idols, and intricate arabesques roused into a kind of ophidian animation. Everything he saw was unspeakably menacing and horrible; and whenever one of the organic entities appeared by its motions to be noticing him, he felt a stark, hideous fright which generally jolted him awake. Of how the organic entities moved, he could tell no more than of how he moved himself. In time he observed a further mystery—the tendency of certain entities to appear suddenly out of empty space, or to disappear totally with equal suddenness. The shrieking, roaring confusion of sound which permeated the abysses was past all analysis as to pitch, timbre or rhythm; but seemed to be synchronous with vague visual changes in all the indefinite objects, organic and inorganic alike. Gilman had a constant sense of dread that it might rise to some unbearable degree of intensity during one or another of its obscure, relentlessly inevitable fluctuations.

But it was not in these vortices of complete alienage that he saw Brown Jenkin. That shocking little horror was reserved for certain lighter, sharper dreams which assailed him just before he dropped into the fullest depths of sleep. He would be lying in the dark fighting

to keep awake when a faint lambent glow would seem to shimmer around the centuried room, showing in a violet mist the convergence of angled planes which had seized his brain so insidiously. The horror would appear to pop out of the rat-hole in the corner and patter toward him over the sagging, wide-planked floor with evil expectancy in its tiny, bearded human face; but mercifully, this dream always melted away before the object got close enough to nuzzle him. It had hellishly long, sharp, canine teeth; Gilman tried to stop up the rat-hole every day, but each night the real tenants of the partitions would gnaw away the obstruction, whatever it might be. Once he had the landlord nail a tin over it, but the next night the rats gnawed a fresh hole, in making which they pushed or dragged out into the room a curious little fragment of bone.

Gilman did not report his fever to the doctor, for he knew he could not pass the examinations if ordered to the college infirmary when every moment was needed for cramming. As it was, he failed in Calculus D and Advanced General Psychology, though not without hope of making up lost ground before the end of the term.

It was in March when the fresh element entered his lighter preliminary dreaming, and the nightmare shape of Brown Jenkin began to be companioned by the nebulous blur which grew more and more to resemble a bent old woman. This

addition disturbed him more than he could account for, but finally he decided that it was like an ancient crone whom he had twice actually encountered in the dark tangle of lanes near the abandoned wharves. On those occasions the evil, sardonic, and seemingly unmotivated stare of the beldame had set him almost shivering—especially the first time when an overgrown rat darting across the shadowed mouth of a neighbouring alley had made him think irrationally of Brown Jenkin. Now, he reflected, those nervous fears were being mirrored in his disordered dreams. That the influence of the old house was unwholesome he could not deny, but traces of his early morbid interest still held him there. He argued that the fever alone was responsible for his nightly fantasies, and that when the touch abated he would be free from the monstrous visions. Those visions, however, were of absorbing vividness and convincingness, and whenever he awaked he retained a vague sense of having undergone much more than he remembered. He was hideously sure that in unrecalled dreams he had talked with both Brown Jenkin and the old woman, and that they had been urging him to go somewhere with them and to meet a third being of greater potency.

Toward the end of March he began to pick up in his mathematics, though the other studies bothered him increasingly. He was getting an intuitive knack for solving

Riemannian equations, and astonished Professor Upham by his comprehension of fourth-dimensional and other problems which had floored all the rest of the class. One afternoon there was a discussion of possible freakish curvatures in space, and of theoretical points of approach or even contact between our part of the cosmos and various other regions as distant as the farthest stars or the transgalactic gulfs themselves—or even as fabulously remote as the tentatively conceivable cosmic units beyond the whole Einsteinian space-time continuum. Gilman's handling of this theme filled everyone with admiration, even though some of his hypothetical illustrations caused an increase in the always plentiful gossip about his nervous and solitary eccentricity. What made the students shake their heads was his sober theory that a man might—given mathematical knowledge admittedly beyond all likelihood of human acquirement—step deliberately from the earth to any other celestial body which might lie at one of an infinity of specific points in the cosmic pattern.

Such a step, he said, would require only two stages; first, a passage out of the three-dimensional sphere we know, and second, a passage back to the three-dimensional sphere at another point, perhaps one of infinite remoteness. That this could be accomplished without loss of life was in many cases conceivable. Any being from any part

of three-dimensional space could probably survive in the fourth dimension; and its survival of the second stage would depend upon what alien part of three-dimensional space it might select for its re-entry. Denizens of some planets might be able to live on certain others—even planets belonging to other galaxies, or to similar dimensional phases of other space-time continua—though of course there must be vast numbers of mutually uninhabitable even though mathematically juxtaposed bodies or zones of space.

It was also possible that the inhabitants of a given dimensional realm could survive entry to many unknown and incomprehensible realms of additional or indefinitely multiplied dimensions—be they within or outside the given space-time continuum—and that the converse would be likewise true. This was a matter for speculation, though one could be fairly certain that the type of mutation involved in a passage from any given dimensional plane to the next higher one would not be destructive of biological integrity as we understand it. Gilman could not be very clear about his reasons for this last assumption, but his haziness here was more than overbalanced by his clearness on other complex points. Professor Upham especially liked his demonstration of the kinship of higher mathematics to certain phases of magical lore transmitted down the ages from an ineffable

antiquity—human or pre-human—whose knowledge of the cosmos and its laws was greater than ours.

Around 1 April Gilman worried considerably because his slow fever did not abate. He was also troubled by what some of his fellow lodgers said about his sleep-walking. It seemed that he was often absent from his bed and that the creaking of his floor at certain hours of the night was remarked by the man in the room below. This fellow also spoke of hearing the tread of shod feet in the night; but Gilman was sure he must have been mistaken in this, since shoes as well as other apparel were always precisely in place in the morning. One could develop all sorts of aural delusions in this morbid old house—for did not Gilman himself, even in daylight, now feel certain that noises other than rat-scratching came from the black voids beyond the slanting wall and above the slanting ceiling? His pathologically sensitive ears began to listen for faint footfalls in the immemorially sealed loft overhead, and sometimes the illusion of such things was agonizingly realistic.

However, he knew that he had actually become a somnambulist; for twice at night his room had been found vacant, though with all his clothing in place. Of this he had been assured by Frank Elwood, the one fellow-student whose poverty forced

him to room in this squalid and unpopular house. Elwood had been studying in the small hours and had come up for help on a differential equation, only to find Gilman absent. It had been rather presumptuous of him to open the unlocked door after knocking had failed to rouse a response, but he had needed the help very badly and thought that his host would not mind a gentle prodding awake. On neither occasion, though, had Gilman been there; and when told of the matter he wondered where he could have been wandering, barefoot and with only his night clothes on. He resolved to investigate the matter if reports of his sleep-walking continued, and thought of sprinkling flour on the floor of the corridor to see where his footsteps might lead. The door was the only conceivable egress, for there was no possible foothold outside the narrow window.

As April advanced, Gilman's fever-sharpened ears were disturbed by the whining prayers of a superstitious loom-fixer named Joe Mazurewicz who had a room on the ground floor. Mazurewicz had told long, rambling stories about the ghost of old Keziah and the furry sharp-fanged, nuzzling thing, and had said he was so badly haunted at times that only his silver crucifix—given him for the purpose by Father Iwanicki of St. Stanislaus' Church—could bring him relief. Now he was praying because the Witches' Sabbath was drawing near. May Eve

was Walpurgis Night, when hell's blackest evil roamed the earth and all the slaves of Satan gathered for nameless rites and deeds. It was always a very bad time in Arkham, even though the fine folks up in Miskatonic Avenue and High and Saltonstall Streets pretended to know nothing about it. There would be bad doings, and a child or two would probably be missing. Joe knew about such things, for his grandmother in the old country had heard tales from her grandmother. It was wise to pray and count one's beads at this season. For three months Keziah and Brown Jenkin had not been near Joe's room, nor near Paul Choynski's room, nor anywhere else—and it meant no good when they held off like that. They must be up to something.

Gilman dropped in at the doctor's office on the sixteenth of the month, and was surprised to find his temperature was not as high as he had feared. The physician questioned him sharply, and advised him to see a nerve specialist. On reflection, he was glad he had not consulted the still more inquisitive college doctor. Old Waldron, who had curtailed his activities before, would have made him take a rest—an impossible thing now that he was so close to great results in his equations. He was certainly near the boundary between the known universe and the fourth dimension, and who could say how much farther he might go?

But even as these thoughts came

to him he wondered at the source of his strange confidence. Did all of this perilous sense of imminence come from the formulae on the sheets he covered day by day? The soft, stealthy, imaginary footsteps in the sealed loft above were unnerving. And now, too, there was a growing feeling that somebody was constantly persuading him to do something terrible which he could not do. How about the somnambulism? Where did he go sometimes in the night? And what was that faint suggestion of sound which once in a while seemed to trickle through the confusion of identifiable sounds even in broad daylight and full wakefulness? Its rhythm did not correspond to anything on earth, unless perhaps to the cadence of one or two unmentionable Sabbat-chants, and sometimes he feared it corresponded to certain attributes of the vague shrieking or roaring in those wholly alien abysses of dream.

The dreams were meanwhile getting to be atrocious. In the lighter preliminary phase the evil old woman was now of fiendish distinctness, and Gilman knew she was the one who had frightened him in the slums. Her bent back, long nose, and shrivelled chin were unmistakable, and her shapeless brown garments were like those he remembered. The expression on her face was one of hideous malevolence and exultation, and when he awaked he could recall a croaking voice that persuaded and threatened. He must meet the Black

Man and go with them all to the throne of Azathoth at the centre of ultimate chaos. That was what she said. He must sign the book of Azathoth in his own blood and take a new secret name now that his independent delvings had gone so far. What kept him from going with her and Brown Jenkin and the other to the throne of Chaos where the thin flutes pipe mindlessly was the fact that he had seen the name "Azathoth" in the *Necronomicon*, and knew it stood for a primal evil too horrible for description.

The old woman always appeared out of thin air near the corner where the downward slant met the inward slant. She seemed to crystallize at a point closer to the ceiling than to the floor, and every night she was a little nearer and more distinct before the dream shifted. Brown Jenkin, too, was always a little nearer at the last, and its yellowish-white fangs glistened shockingly in that unearthly violet phosphorescence. Its shrill loathsome tittering struck more and more into Gilman's head, and he could remember in the morning how it had pronounced the words "Azathoth" and "Nyarlathotep."

In the deeper dreams everything was likewise more distinct, and Gilman felt that the twilight abysses around him were those of the fourth dimension. Those organic entities whose motions seemed least flagrantly irrelevant and unmotivated were probably projections of life-forms from our own planet,

including human beings. What the others were in their own dimensional sphere or spheres he dared not try to think. Two of the less irrelevantly moving things—a rather large congeries of iridescent, prolately spheroidal bubbles and a very much smaller polyhedron of unknown colours and rapidly shifting surface angles—seemed to take notice of him and follow him about or float ahead as he changed position among the titan prisms, labyrinths, cube-and-plane clusters and quasi-buildings; and all the while the vague shrieking and roaring waxed louder and louder, as if approaching some monstrous climax of utterly unendurable intensity.

During the night of 19-20 April the new development occurred. Gilman was half involuntarily moving about in the twilight abysses with the bubble-mass and the small polyhedron floating ahead when he noticed the peculiarly regular angles formed by the edges of some gigantic neighbouring prism-clusters. In another second he was out of the abyss and standing tremulously on a rocky hillside bathed in intense, diffused green light. He was barefooted and in his night-clothes, and when he tried to walk discovered that he could scarcely lift his feet. A swirling vapour hid everything but the immediate sloping terrain from sight, and he shrank from the thought of the

sounds, that might surge out of that vapour.

Then he saw the two shapes laboriously crawling toward him—the old woman and the little furry thing. The crone strained up to her knees and managed to cross her arms in a singular fashion, while Brown Jenkin pointed in a certain direction with a horribly anthropoid forepaw which it raised with evident difficulty. Spurred by an impulse he did not originate, Gilman dragged himself forward along a course determined by the angle of the old woman's arms and the direction of the small monstrosity's paw, and before he had shuffled three steps he was back in the twilight abysses. Geometrical shapes seethed around him, and he fell dizzily and interminably. At last he woke in his bed in the crazily angled garret of the eldritch old house.

He was good for nothing that morning, and stayed away from all his classes. Some unknown attraction was pulling his eyes in a seemingly irrelevant direction, for he could not help staring at a certain vacant spot on the floor. As the day advanced, the focus of his unseeing eyes changed position, and by noon he had conquered the impulse to stare at vacancy. About two o'clock he went out for lunch and as he threaded the narrow lanes of the city he found himself turning always to the southeast. Only an effort halted him at a cafeteria in Church Street, and after the meal he felt the

unknown pull still more strongly.

He would have to consult a nerve specialist after all—perhaps there was a connection with his somnambulism—but meanwhile he might at least try to break the morbid spell himself. Undoubtedly he could still manage to walk away from the pull, so with great resolution he headed against it and dragged himself deliberately north along Garrison Street. By the time he had reached the bridge over the Miskatonic he was in a cold perspiration, and he clutched at the iron railing as he gazed upstream at the ill-regarded island whose regular lines of ancient standing stones brooded sullenly in the afternoon sunlight.

Then he gave a start. For there was a clearly visible living figure on that desolate island, and a second glance told him it was certainly the strange old woman whose sinister aspect had worked itself so disastrously into his dreams. The tall grass near her was moving, too, as if some other living thing were crawling close to the ground. When the old woman began to turn toward him he fled precipitately off the bridge and into the shelter of the town's labyrinthine waterfront alleys. Distant though the island was, he felt that a monstrous and invincible evil could flow from the sardonic stare of that bent, ancient figure in brown.

The southeastward pull still held, and only with tremendous

resolution could Gilman drag himself into the old house and up the rickety stairs. For hours he sat silent and aimless, with his eyes shifting gradually westward. About six o'clock his sharpened ears caught the whining prayers of Joe Mazurewicz two floors below, and in desperation he seized his hat and walked out into the sunset-golden streets, letting the now directly southward pull carry him where it might. An hour later darkness found him in the open fields beyond Hangman's Brook, with the glimmering spring stars shining ahead. The urge to walk was gradually changing to an urge to leap mystically into space, and suddenly he realized just where the source of the pull lay.

It was in the sky. A definite point among the stars had a claim on him and was calling him. Apparently it was a point somewhere between Hydra and Argo Navis, and he knew that he had been urged toward it ever since he had awaked soon after dawn. In the morning it had been underfoot, and now it was roughly south but stealing toward the west. What was the meaning of this new thing? Was he going mad? How long would it last? Again mustering his resolution, Gilman turned and dragged himself back to the sinister old house.

Mazurewicz was waiting for him at the door, and seemed both anxious and reluctant to whisper some fresh bit of superstition. It was about the

witch-light. Joe had been out celebrating the night before—and it was Patriots' Day in Massachusetts—and had come home after midnight. Looking up at the house from outside, he had thought at first that Gilman's window was dark, but then he had seen the faint violet glow within. He wanted to warn the gentleman about that glow, for everybody in Arkham knew it was Keziah's witch-light which played near Brown Jenkin and the ghost of the old crone herself. He had not mentioned this before, but now he must tell about it because it meant that Keziah and her long-toothed familiar were haunting the young gentleman. Sometimes he and Paul Choynski and Landlord Dombrowski thought they saw that light seeping out of cracks in the sealed loft above the young gentleman's room, but they had all agreed not to talk about that. However, it would be better for the gentleman to take another room and get a crucifix from some good priest like Father Iwanicki.

As the man rambled on, Gilman felt a nameless panic clutch at his throat. He knew that Joe must have been half drunk when he came home the night before; yet the mention of a violet light in the garret window was of frightful import. It was a lambent glow of this sort which always played about the old woman and the small furry thing in those lighter, sharper dreams which prefaced his plunge into unknown

abysses, and the thought that a wakeful second person could see the dream-luminance was utterly beyond sane harborage. Yet where had the fellow got such an odd notion? Had he himself talked as well as walked around the house in his sleep? No, Joe said, he had not—but he must check up on this. Perhaps Frank Elwood could tell him something, though he hated to ask.

Fever—wild dreams—somnambulism—illusions of sounds—a pull toward a point in the sky—and now a suspicion of insane sleep-talking! He must stop studying, see a nerve specialist, and take himself in hand. When he climbed to the second storey he paused at Elwood's door but saw that the other youth was out. Reluctantly he continued up to his garret room and sat down in the dark. His gaze was still pulled to the southward, but he also found himself listening intently for some sound in the closed loft above, and half imagining that an evil violet light seeped down through an infinitesimal crack in the low, slanting ceiling.

That night as Gilman slept, the violet light broke upon him with heightened intensity, and the old witch and small furry thing, getting closer than ever before, mocked him with inhuman squeals and devilish gestures. He was glad to sink into the vaguely roaring twilight abysses, though the pursuit of that iridescent bubble-congeries and that kaleidoscopic little polyhedron was menacing and irritating. Then came

the shift as vast converging planes of a slippery-looking substance loomed above and below him—a shift which ended in a flash of delirium and a blaze of unknown, alien light in which yellow, carmine, and indigo were madly and inextricably blended.

He was half lying on a high, fantastically balustraded terrace above a boundless jungle of outlandish, incredible peaks, balanced planes, domes, minarets, horizontal disks poised on pinnacles, and numberless forms of still greater wildness—some of stone and some of metal—which glittered gorgeously in the mixed, almost blistering glare from a poly-chromatic sky. Looking upward he saw three stupendous disks of flame, each of a different hue, and at a different height above an infinitely distant curving horizon of low mountains. Behind him tiers of higher terraces towered aloft as far as he could see. The city below stretched away to the limits of vision, and he hoped that no sound would well up from it.

The pavement from which he easily raised himself was a veined polished stone beyond his power to identify, and the tiles were cut in bizarre-angled shapes which struck him as less asymmetrical than based on some unearthly symmetry whose laws he could not comprehend. The balustrade was chest-high, delicate, and fantastically wrought, while along the rail were ranged at short intervals little figures of grotesque

design and exquisite workmanship. They, like the whole balustrade, seemed to be made of some sort of shining metal whose colour could not be guessed in the chaos of mixed effulgences, and their nature utterly defied conjecture. They represented some ridged barrel-shaped objects with thin horizontal arms radiating spoke-like from a central ring and with vertical knobs or bulbs projecting from the head and base of the barrel. Each of these knobs was the hub of a system of five long, flat, triangularly tapering arms arranged around it like the arms of a starfish—nearly horizontal, but curving slightly away from the central barrel. The base of the bottom knob was fused to the long railing with so delicate a point of contact that several figures had been broken off and were missing. The figures were about four and a half inches in height, while the spiky arms gave them a maximum diameter of about two and a half inches.

When Gilman stood up, the tiles felt hot to his bare feet. He was wholly alone, and his first act was to walk to the balustrade and look dizzily down at the endless, Cyclopean city almost two thousand feet below. As he listened he thought a rhythmic confusion of faint musical pipings covering a wide tonal range welled up from the narrow streets beneath, and he wished he might discern the denizens of the place. The sight turned him giddy after a while, so that he would have fallen

to the pavement had he not clutched instinctively at the lustrous balustrade. His right hand fell on one of the projecting figures, the touch seeming to steady him slightly. It was too much, however, for the exotic delicacy of the metal-work, and the spiky figure snapped off under his grasp. Still half dazed, he continued to clutch it as his other hand seized a vacant space on the smooth railing.

But now his over-sensitive ears caught something behind him, and he looked back across the level terrace. Approaching him softly though without apparent furtiveness were five figures, two of which were the sinister old woman and the fanged, furry little animal. The other three were what sent him unconscious; for they were living entities about eight feet high, shaped precisely like the spiky images on the balustrade, and propelling themselves by a spider-like wriggling of their lower set of starfish-arms.

Gilman awoke in his bed, drenched by a cold perspiration and with a smarting sensation in his face, hands and feet. Springing to the floor, he washed and dressed in frantic haste, as if it were necessary for him to get out of the house as quickly as possible. He did not know where he wished to go, but felt that once more he would have to sacrifice his classes. The odd pull toward that spot in the sky between Hydra and Argo had abated, but another of even greater strength had taken its place. Now he felt that he must go

north—indefinitely north. He dreaded to cross the bridge that gave a view of the desolate island in the Miskatonic, so went over the Peabody Avenue bridge. Very often he stumbled, for his eyes and ears were chained to an extremely lofty point in the blank blue sky.

After about an hour he got himself under better control, and saw that he was far from the city. All around him stretched the bleak emptiness of salt marshes, while the narrow road ahead led to Innsmouth—that ancient, half-deserted town which Arkham people were so curiously unwilling to visit. Though the northward pull had not diminished, he resisted it as he had resisted the other pull, and finally found that he could almost balance the one against the other. Plodding back to town and getting some coffee at a soda fountain, he dragged himself into the public library and browsed aimlessly among the lighter magazines. Once he met some friends who remarked how oddly sunburned he looked, but he did not tell them of his walk. At three o'clock he took some lunch at a restaurant, noting meanwhile that the pull had either lessened or divided itself. After that he killed the time at a cheap cinema show, seeing the inane performance over and over again without paying any attention to it.

About nine at night he drifted homeward and shuffled into the ancient house. Joe Mazurewicz was whining unintelligible prayers, and

Gilman hastened up to his own garret chamber without pausing to see if Elwood was in. It was when he turned on the feeble electric light that the shock came. At once he saw there was something on the table which did not belong there, and a second look left no room for doubt. Lying on its side—for it could not stand up alone—was the exotic spiky figure which in his monstrous dream he had broken off the fantastic balustrade. No detail was missing. The ridged, barrel-shaped center, the thin radiating arms, the knobs at each end, and the flat, slightly outward-curving starfish-arms spreading from those knobs—all were there. In the electric light the colour seemed to be a kind of iridescent grey veined with green; and Gilman could see amidst his horror and bewilderment that one of the knobs ended in a jagged break, corresponding to its former point of attachment to the dream-railing.

Only his tendency toward a dazed stupor prevented him from screaming aloud. This fusion of dream and reality was too much to bear. Still dazed, he clutched at the spiky thing and staggered downstairs to Landlord Dombrowski's quarters. The whining prayers of the superstitious loom-fixer were still sounding through the mouldy halls, but Gilman did not mind them now.

The landlord was in, and greeted him pleasantly. No, he had not seen that thing before and did not know

anything about it. But his wife had said she found a funny tin thing in one of the beds when she fixed the rooms at noon, and maybe that was it. Dombrowski called her, and she waddled in. Yes, that was the thing. She had found it in the young gentleman's bed—on the side next the wall. It had looked very queer to her, but of course the young gentleman had lots of queer things in his room—books and curios and pictures and markings on paper. She certainly knew nothing about it.

So Gilman climbed upstairs again in mental turmoil, convinced that he was either still dreaming or that his somnambulism had run to incredible extremes and led him to depredations in unknown places. Where had he got this outré thing? He did not recall seeing it in any museum in Arkham. It must have been somewhere, though; and the sight of it as he snatched it in his sleep must have caused the odd dream-picture of the balustraded terrace. Next day he would make some very guarded inquiries—and perhaps see the nerve specialist.

Meanwhile he would try to keep track of his somnambulism. As he went upstairs and across the garret hall he sprinkled about some flour which he had borrowed—with a frank admission as to its purpose—from the landlord. He had stopped at Elwood's door on the way, but had found all dark within. Entering his room, he placed the spiky thing on the table, and lay down in

complete mental and physical exhaustion without pausing to undress. From the closed loft above the slating ceiling he thought he heard a faint scratching and padding, but he was too disorganized even to mind it. That cryptical pull from the north was getting very strong again, though it seemed now to come from a lower place in the sky.

In the dazzling violet light of dream the old woman and the fanged, furry thing came again and with a greater distinctness than on any former occasion. This time they actually reached him, and he felt the crone's withered claws clutching at him. He was pulled out of bed and into empty space, and for a moment he heard a rhythmic roaring and saw the twilight amorphousness of the vague abysses seething around him. But that moment was very brief, for presently he was in a crude, windowless little space with rough beams and planks rising to a peak just above his head, and with a curious slanting floor underfoot. Propped level on that floor were low cases full of books of every degree of antiquity and disintegration, and in the centre were a table and bench, both apparently fastened in place. Small objects of unknown shape and nature were ranged on the tops of the cases, and in the flaming violet light Gilman thought he saw a counterpart of the spiky image which had puzzled him so horribly. On the left the floor fell abruptly away, leaving a black triangular gulf out of which, after a

second's dry rattling, there presently climbed the hateful little furry thing with the yellow fangs and bearded human face.

The evilly-grinning beldame still clutched him, and beyond the table stood a figure he had never seen before—a tall, lean man of dead black colouration but without the slightest sign of negroid features: wholly devoid of either hair or beard, and wearing as his only garment a shapeless robe of some heavy black fabric. His feet were indistinguishable because of the table and bench, but he must have been shod, since there was a clicking whenever he changed position. The man did not speak, and bore no trace of expression on his small, regular features. He merely pointed to a book of prodigious size which lay open on the table, while the beldame thrust a huge grey quill into Gilman's right hand. Over everything was a pall of intensely maddening fear, and the climax was reached when the furry thing ran up the dreamer's clothing to his shoulders and then down his left arm, finally biting him sharply in the wrist just below his cuff. As the blood spurted from this wound Gilman lapsed into a faint.

He awaked on the morning of the twenty-second with a pain in his left wrist, and saw that his cuff was brown with dried blood. His recollections were very confused, but the scene with the black man in the unknown space stood out vividly. The rats must have bitten him as he

slept, giving rise to the climax of that frightful dream. Opening the door, he saw that the floor on the corridor floor was undisturbed except for the huge prints of the loutish fellow who roomed at the other end of the garret. So he had not been sleep-walking this time. But something would have to be done about those rats. He would speak to the landlord about them. Again he tried to stop up the hole at the base of the slanting wall, wedging in a candlestick which seemed of about the right size. His ears were ringing horribly, as if with the residual echoes of some horrible noise heard in dreams.

As he bathed and changed clothes he tried to recall what he had dreamed after the scene in the violet-litten space, but nothing definite would crystallize in his mind. That scene itself must have corresponded to the sealed loft overhead, which had begun to attack his imagination so violently, but later impressions were faint and hazy. There were suggestions of the vague, twilight abysses, and of still vaster, blacker abysses beyond them—abysses in which all fixed suggestions were absent. He had been taken there by the bubble-congeries and the little polyhedron which always dogged him; but they, like himself, had changed to wisps of mist in this farther void of ultimate blackness. Something else had gone on ahead—a larger wisp which now and then condensed into nameless approximations of form—and he

thought that their progress had not been in a straight line, but rather along the alien curves and spirals of some ethereal vortex which obeyed laws unknown to the physics and mathematics of any conceivable cosmos. Eventually there had been a hint of vast, leaping shadows, of a monstrous, half-acoustic pulsing, and of the thin, monotonous piping of an unseen flute—but that was all. Gilman decided he had picked up that last conception from what he had read in the *Necronomicon* about the mindless entity Azathoth, which rules all time and space from a black throne at the centre of Chaos.

When the blood was washed away the wrist wound proved very slight, and Gilman puzzled over the location of the two tiny punctures. It occurred to him that there was no blood on the bedspread where he had lain—which was very curious in view of the amount on his skin and cuff. Had he been sleep-walking within his room, and had the rat bitten him as he sat in some chair or paused in some less rational position? He looked in every corner for brownish drops or stains, but did not find any. He had better, he thought, sprinkle flour within the room as well as outside the door—though after all no further proof of his sleep-walking was needed. He knew he did walk and the thing to do now was to stop it. He must ask Frank Elwood for help. This morning the strange pulls from space seemed lessened, though they were replaced

by another sensation even more inexplicable. It was a vague, insistent impulse to fly away from his present situation, but held not a hint of the specific direction in which he wished to fly. As he picked up the strange spiky image on the table he thought the older northward pull grew a trifle stronger; but even so, it was wholly overruled by the newer and more bewildering urge.

He took the spiky image down to Elwood's room, steeling himself against the whines of the loom-fixer which welled up from the ground floor. Elwood was in, thank heaven, and appeared to be stirring about. There was time for a little conversation before leaving for breakfast and college, so Gilman hurriedly poured forth an account of his recent dreams and fears. His host was very sympathetic, and agreed that something ought to be done. He was shocked by his guest's drawn, haggard aspect, and noticed the queer, abnormal-looking sunburn which others had remarked during the past week.

There was not much, though, that he could say. He had not seen Gilman on any sleep-walking expedition, and had no idea what the curious image could be. He had, though, heard the French-Canadian who lodged just under Gilman talking to Mazurewicz one evening. They were telling each other how badly they dreaded the coming of Walpurgis Night, now only a few days off; and were exchanging

pitying comments about the poor, doomed young gentleman. Desrochers, the fellow under Gilman's room, had spoken of nocturnal footsteps shod and unshod, and of the violet light he saw one night when he had stolen fearfully up to peer through Gilman's keyhole. He had not dared to peer, he told Mazurewicz, after he had glimpsed that light through the cracks around the door. There had been soft talking, too—and as he began to describe it his voice had sunk to an inaudible whisper.

Elwood could not imagine what had set these superstitious creatures gossiping, but supposed their imaginations had been roused by Gilman's late hours and somnolent walking and talking on the one hand, and by the nearness of traditionally-feared May Eve on the other hand. That Gilman talked in his sleep was plain, and it was obviously from Desrochers' keyhole listenings that the delusive notion of the violet dream-light had got abroad. These simple people were quick to imagine they had seen any odd thing they had heard about. As for a plan of action—Gilman had better move down to Elwood's room and avoid sleeping alone. Elwood would, if awake, rouse him whenever he began to talk or rise in his sleep. Very soon, too, he must see the specialist. Meanwhile they would take the spiky image around to the various museums and to certain professors; seeking identification and stating that it had been found in a

public rubbish-can. Also, Dombrowski must attend to the poisoning of those rats in the walls.

Braced up by Elwood's companionship, Gilman attended classes that day. Strange urges still tugged at him, but he could sidetrack them with considerable success. During a free period he showed the queer image to several professors, all of whom were intensely interested, though none of them could shed any light upon its nature or origin. That night he slept on a couch which Elwood had had the landlord bring to the second-storey room, and for the first time in weeks was wholly free from disquieting dreams. But the feverishness still hung on, and the whines of the loom-fixer were an unnerving influence.

During the next few days Gilman enjoyed an almost perfect immunity from morbid manifestations. He had, Elwood said, showed no tendency to talk or rise in his sleep; and meanwhile the landlord was putting rat-poison everywhere. The only disturbing element was the talk among the superstitious foreigners, whose imaginations had become highly excited. Mazurewicz was always trying to make him get a crucifix, and finally forced one upon him which he said had been blessed by the good Father Iwanicki. Desrochers, too, had something to say; in fact, he insisted that cautious steps had sounded in

the now vacant room above him on the first and second nights of Gilman's absence from it. Paul Choynski thought he heard sounds in the halls and on the stairs at night, and claimed that his door had been softly tried, while Mrs. Dombrowski vowed she had seen Brown Jenkin for the first time since All-Hallows. But such naïve reports could mean very little, and Gilman let the cheap metal crucifix hang idly from a knob on his host's dresser.

For three days Gilman and Elwood canvassed the local museums in an effort to identify the strange spiky image, but always without success. In every quarter, however, interest was intense; for the utter alienage of the thing was a tremendous challenge to scientific curiosity. One of the small radiating arms was broken off and subjected to chemical analysis. Professor Ellery found platinum, iron and tellurium in the strange alloy; but mixed with these were at least three other apparent elements of high atomic weight which chemistry was absolutely powerless to classify. Not only did they fail to correspond with any known element, but they did not even fit the vacant places reserved for probable elements in the periodic system. The mystery remains unsolved to this day, though the image is on exhibition at the museum of Miskatonic University.

On the morning of April twenty-seventh a fresh rat-hole appeared

in the room where Gilman was a guest, but Dombrowski tinned it up during the day. The poison was not having much effect, for scratchings and scurrings in the walls were virtually undiminished.

Elwood was out late that night, and Gilman waited up for him. He did not wish to go to sleep in a room alone—especially since he thought he had glimpsed in the evening twilight the repellent old woman whose image had become so horribly transferred to his dreams. He wondered who she was, and what had been near her rattling the tin can in a rubbish-heap at the mouth of a squalid courtyard. The crone had seemed to notice him and leer evilly at him—though perhaps this was merely his imagination.

The next day both youths felt very tired, and knew they would sleep like logs when night came. In the evening they drowsily discussed the mathematical studies which had so completely and perhaps harmfully engrossed Gilman, and speculated about the linkage with ancient magic and folklore which seemed so darkly probable. They spoke of old Keziah Mason, and Elwood agreed that Gilman had good scientific grounds for thinking she might have stumbled on strange and significant information. The hidden cults to which these witches belonged often guarded and handed down surprising secrets from elder, forgotten eons; and it was by no means impossible that Keziah had actually mastered

the art of passing through dimensional gates. Tradition emphasizes the uselessness of material barriers in halting a witch's notions, and who can say what underlies the old tales of broomstick rides through the night?

Whether a modern student could ever gain similar powers from mathematical research alone, was still to be seen. Success, Gilman added, might lead to dangerous and unthinkable situations, for who could foretell the conditions pervading an adjacent but normally inaccessible dimension? On the other hand, the picturesque possibilities were enormous. Time could not exist in certain belts of space, and by entering and remaining in such a belt one might preserve one's life and age indefinitely; never suffering organic metabolism or deterioration except for slight amounts incurred during visits to one's own or similar planes. One might, for example, pass into a timeless dimension and emerge at some remote period of the earth's history as young as before.

Whether anybody had ever managed to do this, one could hardly conjecture with any degree of authority. Old legends are hazy and ambiguous, and in historic times all attempts at crossing forbidden gaps seem complicated by strange and terrible alliances with beings and messengers from outside. There was the immemorial figure of the deputy or messenger of hidden and terrible

powers—the “Black Man” of the witch-cult, and the “Nyarlathotep” of the Necronomicon. There was, too, the baffling problem of the lesser messengers or intermediaries—the quasi-animals and queer hybrids which legend depicts as witches’ familiars. As Gilman and Elwood retired, too sleepy to argue further, they heard Joe Mazurewicz reel into the house half drunk, and shuddered at the desperate wildness of his whining prayers.

That night Gilman saw the violet light again. In his dream he had heard a scratching and gnawing in the partitions, and thought that someone fumbled clumsily at the latch. Then he saw the old woman and the small furry thing advancing toward him over the carpeted floor. The beldame’s face was alight with inhuman exultation, and the little yellow-toothed morbidity tittered mockingly as it pointed at the heavily-sleeping form of Elwood on the other couch across the room. A paralysis of fear stifled all attempts to cry out. As once before, the hideous crone seized Gilman by the shoulders, yanking him out of bed and into empty space. Again the infinitude of the shrieking abysses flashed past him, but in another second he thought he was in a dark, muddy, unknown alley of foetid odors with the rotting walls of ancient houses towering up on every hand.

Ahead was the robed black man he had seen in the peaked space in

the other dream, while from a lesser distance the old woman was beckoning and grimacing imperiously. Brown Jenkin was rubbing itself with a kind of affectionate playfulness around the ankles of the black man, which the deep mud largely concealed. There was a dark open doorway on the right, to which the black man silently pointed. Into this the grinning crone started, dragging Gilman after her by his pajama sleeves. There were evil-smelling staircases which creaked ominously, and on which the old woman seemed to radiate a faint violet light; and finally a door leading off a landing. The crone fumbled with the latch and pushed the door open, motioning to Gilman to wait, and disappearing inside the black aperture.

The youth’s over-sensitive ears caught a hideous strangled cry, and presently the beldame came out of the room bearing a small, senseless form which she thrust at the dreamer as if ordering him to carry it. The sight of this form, and the expression on its face, broke the spell. Still too dazed to cry out, he plunged recklessly down the noisome staircase and into the mud outside, halting only when seized and choked by the waiting black man. As consciousness departed he heard the faint, shrill tittering of the fanged, rat-like abnormality.

On the morning of the twenty-ninth Gilman awaked into a maelstrom of horror. The instant he opened his eyes he knew something

was terribly wrong, for he was back in his old garret room with the slanting wall and ceiling, sprawled on the now unmade bed. His throat was aching inexplicably, and as he struggled to a sitting posture he saw with growing fright that his feet and pajama bottoms were brown with caked mud. For the moment his recollections were hopelessly hazy, but he knew at least that he must have been sleep-walking. Elwood had been lost too deeply in slumber to hear and stop him. On the floor were confused muddy prints, but oddly enough they did not extend all the way to the door. The more Gilman looked at them, the more peculiar they seemed; for in addition to those he could recognize as his there were some smaller, almost round markings—such as the legs of a large chair or a table might make, except that most of them tended to be divided into halves. There were also some curious muddy rat-tracks leading out of a fresh hole and back into it again. Utter bewilderment and the fear of madness racked Gilman as he staggered to the door and saw that there were no muddy prints outside. The more he remembered of his hideous dream the more terrified he felt, and it added to his desperation to hear Joe Mazurewicz chanting mournfully two floors below.

Descending to Elwood’s room he roused his still-sleeping host and began telling of how he had found himself, but Elwood could form no

idea of what might really have happened. Where Gilman could have been, how he got back to his room without making tracks in the hall, and how the muddy, furniture-like prints came to be mixed with his in the garret chamber, were wholly beyond conjecture. Then there were those dark, livid marks on his throat, as if he had tried to strangle himself. He put his hands up to them, but found that they did not even approximately fit. While they were talking, Desrochers dropped in to say that he had heard a terrific clattering overhead in the dark small hours. No, there had been no one on the stairs after midnight, though just before midnight he had heard faint footfalls in the garret, and cautiously descending steps he did not like. It was, he added, a very bad time of year for Arkham. The young gentleman had better be sure to wear the crucifix Joe Mazurewicz had given him. Even the daytime was not safe, for after dawn there had been strange sounds in the house—especially a thin, childish wail hastily choked off.

Gilman mechanically attended classes that morning, but was wholly unable to fix his mind on his studies. A mood of hideous apprehension and expectancy had seized him, and he seemed to be awaiting the fall of some annihilating blow. At noon he lunched at the University spa, picking up a paper from the next seat as he waited for dessert. But he never ate that dessert; for an item

on the paper's first page left him limp, wild-eyed, and able only to pay his check and stagger back to Elwood's room.

There had been a strange kidnapping the night before in Orne's Gangway, and the two-year-old child of a clod-like laundry worker named Anastasia Wolejko had completely vanished from sight. The mother, it appeared, had feared the event for some time; but the reasons she assigned for her fear were so grotesque that no one took them seriously. She had, she said, seen Brown Jenkin about the place now and then ever since early in March, and knew from its grimaces and titterings that little Ladislav must be marked for sacrifice at the awful Sabbath on Walpurgis Night. She had asked her neighbour Mary Czaneck to sleep in the room and try to protect the child, but Mary had not dared. She could not tell the police, for they never believed such things. Children had been taken that way every year ever since she could remember. And her friend Pete Stowacki would not help because he wanted the child out of the way.

But what threw Gilman into a cold perspiration was the report of a pair of revellers who had been walking past the mouth of the gangway just after midnight. They admitted they had been drunk, but both vowed they had seen a crazily dressed trio furtively entering the dark passageway. There had, they said, been a huge robed negro, a little

old woman in rags, and a young white man in his night-clothes. The old woman had been dragging the youth, while around the feet of the negro a tame rat was rubbing and weaving in the brown mud.

Gilman sat in a daze all the afternoon, and Elwood—who had meanwhile seen the papers and formed terrible conjectures from them—found him thus when he came home. This time neither could doubt but that something hideously serious was closing in around them. Between the phantasms of nightmare and the realities of the objective world a monstrous and unthinkable relationship was crystallizing, and only stupendous vigilance could avert still more direful developments. Gilman must see a specialist sooner or later, but not just now, when all the papers were full of this kidnapping business.

Just what had really happened was maddeningly obscure, and for a moment both Gilman and Elwood exchanged whispered theories of the wildest kind. Had Gilman unconsciously succeeded better than he knew in his studies of space and its dimensions? Had he actually slipped outside our sphere to points unguessed and unimaginable? Where—if anywhere—had he been on those nights of demoniac alienage? The roaring twilight abysses—the green hillside—the blistering terrace—the pulls from the stars—the ultimate black vortex—the black man—the muddy

alley and the stairs—the old witch and the fanged, furry horror—the bubble-congeries and the little polyhedron—the strange sunburn—the wrist-wound—the unexplained image—the muddy feet—the throat marks—the tales and fears of the superstitious foreigners—what did all this mean? To what extent could the laws of sanity apply to such a case?

There was no sleep for either of them that night, but next day they both cut classes and drowsed. This was April thirtieth, and with the dusk would come the hellish Sabbath-time which all the foreigners and the superstitious old folk feared. Mazurewicz came home at six o'clock and said people at the mill were whispering that the Walpurgis revels would be held in the dark ravine beyond Meadow Hill where the old white stone stands in a place queerly devoid of all plant-life. Some of them had even told the police and advised them to look there for the missing Wolejko child, but they did not believe anything would be done. Joe insisted that the poor young gentleman wear his nickel-chained crucifix, and Gilman put it on and dropped it inside his shirt to humour the fellow.

Late at night the two youths sat drowsing in their chairs, lulled by the praying of the loom-fixer on the floor below. Gilman listened as he nodded, his preternaturally sharpened hearing seeming to strain for some subtle, dreaded murmur

beyond the noises in the ancient house. Unwholesome recollections of things in the Necronomicon and the Black Book welled up, and he found himself swaying to infandous rhythms said to pertain to the blackest ceremonies of the Sabbath and to have an origin outside the time and space we comprehend.

Presently he realized what he was listening for—the hellish chant of the celebrants in the distant black valley. How did he know so much about what they expected? How did he know the time when Nahab and her acolyte were due to bear the brimming bowl which would follow the black cock and the black goat? He saw that Elwood had dropped asleep, and tried to call out and waken him. Something, however, closed his throat. He was not his own master. Had he signed the black man's book after all?

Then his fevered, abnormal hearing caught the distant, wind-borne notes. Over miles of hill and field and alley they came, but he recognized them none the less. The fires must be lit, and the dancers must be starting in. How could he keep himself from going? What was it that had enmeshed him? Mathematics—folklore—the house—old Keziah—Brown Jenkin... and now he saw that there was a fresh rat-hole in the wall near his couch. Above the distant chanting and the nearer praying of Joe Mazurewicz came another sound—a stealthy, determined

scratching in the partitions. He hoped the electric lights would not go out. Then he saw the fanged, bearded little face in the rat-hole—the accursed little face which he at last realized bore such a shocking, mocking resemblance to old Keziah's—and heard the faint fumbling at the door.

The screaming twilight abysses flashed before him, and he felt himself helpless in the formless grasp of the iridescent bubble-congeries. Ahead raced the small, kaleidoscopic polyhedron and all through the churning void there was a heightening and acceleration of the vague tonal pattern which seemed to foreshadow some unutterable and unendurable climax. He seemed to know what was coming—the monstrous burst of Walpurgis-rhythm in whose cosmic timbre would be concentrated all the primal, ultimate space-time seethings which lie behind the massed spheres of matter and sometimes break forth in measured reverberations that penetrate faintly to every layer of entity and give hideous significance throughout the worlds to certain dreaded periods.

But all this vanished in a second. He was again in the cramped, violet-litten peaked space with the slanting floor, the low cases of ancient books, the bench and table, the queer objects, and the triangular gulf at one side. On the table lay a small white figure—an infant boy, unclothed and unconscious—while on the other side stood the

monstrous, leering old woman with a gleaming, grotesque-hafted knife in her right hand, and a queerly proportioned pale metal bowl covered with curiously chased designs and having delicate lateral handles in her left. She was intoning some croaking ritual in a language which Gilman could not understand, but which seemed like something guardedly quoted in the *Necronomicon*.

As the scene grew clearer he saw the ancient crone bend forward and extend the empty bowl across the table—and unable to control his own emotions, he reached far forward and took it in both hands, noticing as he did so its comparative lightness. At the same moment the disgusting form of Brown Jenkin scrambled up over the brink of the triangular black gulf on his left. The crone now motioned him to hold the bowl in a certain position while she raised the huge, grotesque knife above the small white victim as high as her right hand could reach. The fanged, furry thing began tittering a continuation of the unknown ritual, while the witch croaked loathsome responses. Gilman felt a gnawing poignant abhorrence shoot through his mental and emotional paralysis, and the light metal bowl shook in his grasp. A second later the downward motion of the knife broke the spell completely, and he dropped the bowl with a resounding bell-like clangour while his hands darted out frantically to stop the monstrous deed.

In an instant he had edged up the slanting floor around the end of the table and wrenched the knife from the old woman's claws; sending it clattering over the brink of the narrow triangular gulf. In another instant, however, matters were reversed; for those murderous claws had locked themselves tightly around his own throat, while the wrinkled face was twisted with insane fury. He felt the chain of the cheap crucifix grinding into his neck, and in his peril wondered how the sight of the object itself would affect the evil creature. Her strength was altogether superhuman, but as she continued her choking he reached feebly in his shirt and drew out the metal symbol, snapping the chain and pulling it free.

At sight of the device the witch seemed struck with panic, and her grip relaxed long enough to give Gilman a chance to break it entirely. He pulled the steel-like claws from his neck, and would have dragged the beldame over the edge of the gulf had not the claws received a fresh access of strength and closed in again. This time he resolved to reply in kind, and his own hands reached out for the creature's throat. Before she saw what he was doing he had the chain of the crucifix twisted about her neck, and a moment later he had tightened it enough to cut off her breath. During her last struggle he felt something bite at his ankle, and saw that Brown Jenkin had come to her aid. With

one savage kick he sent the morbidity over the edge of the gulf and heard it whimper on some level far below.

Whether he had killed the ancient crone he did not know, but he let her rest on the floor where she had fallen. Then, as he turned away, he saw on the table a sight which nearly snapped the last thread of his reason. Brown Jenkin, tough of sinew and with four tiny hands of demoniac dexterity, had been busy while the witch was throttling him, and his efforts had been in vain. What he had prevented the knife from doing to the victim's chest, the yellow fangs of the furry blasphemy had done to a wrist—and the bowl so lately on the floor stood full beside the small lifeless body.

In his dream-delirium Gilman heard the hellish alien-rhythmed chant of the Sabbath coming from an infinite distance, and knew the black man must be there. Confused memories mixed themselves with his mathematics, and he believed his subconscious mind held the angles which he needed to guide him back to the normal world alone and unaided for the first time. He felt sure he was in the immemorially sealed loft above his own room, but whether he could ever escape through the slanting floor or the long-stooped egress he doubted greatly. Besides, would not an escape from a dream-loft bring him merely into a dream-house—an abnormal projection of the actual place he sought? He was wholly bewildered

as to the relation betwixt dream and reality in all his experiences.

The passage through the vague abysses would be frightful, for the Walpurgis-rhythm would be vibrating, and at last he would have to hear that hitherto-veiled cosmic pulsing which he so mortally dreaded. Even now he could detect a low, monstrous shaking whose tempo he suspected all too well. At Sabbath-time it always mounted and reached through to the worlds to summon the initiate to nameless rites. Half the chants of the Sabbath were patterned on this faintly overheard pulsing which no earthly ear could endure in its unveiled spatial fulness. Gilman wondered, too, whether he could trust his instincts to take him back to the right part of space. How could he be sure he would not land on that green-litten hillside of a far planet, on the tessellated terrace above the city of tentacled monsters somewhere beyond the galaxy or in the spiral black vortices of that ultimate void of Chaos where reigns the mindless demon-sultan Azathoth?

Just before he made the plunge the violet light went out and left him in utter blackness. The witch—old Keziah—Nahab—that must have meant her death. And mixed with the distant chant of the Sabbath and the whimpers of Brown Jenkin in the gulf below he thought he heard another and wilder whine from unknown depths. Joe Mazurewicz—the prayers against the Crawling

Chaos now turning to an inexplicably triumphant shriek—worlds of sardonic actuality impinging on vortices of febrile dream—Iâ! Shub-Niggurath! The Goat with a Thousand Young....

They found Gilman on the floor of his queerly-angled old garret room long before dawn, for the terrible cry had brought Desrochers and Choynski and Dombrowski and Mazurewicz at once, and had even wakened the soundly sleeping Elwood in his chair. He was alive, and with open, staring eyes, but seemed largely unconscious. On his throat were the marks of murderous hands, and on his left ankle was a distressing rat-bite. His clothing was badly rumpled and Joe's crucifix was missing, Elwood trembled, afraid even to speculate what new form his friend's sleep-walking had taken. Mazurewicz seemed half dazed because of a "sign" he said he had had in response to his prayers, and he crossed himself frantically when the squealing and whimpering of a rat sounded from beyond the slanting partition.

When the dreamer was settled on his couch in Elwood's room they sent for Doctor Malkowski—a local practitioner who would repeat no tales where they might prove embarrassing—and he gave Gilman two hypodermic injections which caused him to relax in something like natural drowsiness. During the day

the patient regained consciousness at times and whispered his newest dream disjointedly to Elwood. It was a painful process, and at its very start brought out a fresh and disconcerting fact.

Gilman—whose ears had so lately possessed an abnormal sensitiveness—was now stone-deaf. Doctor Malkowski, summoned again in haste, told Elwood that both ear-drums were ruptured, as if by the impact of some stupendous sound intense beyond all human conception or endurance. How such a sound could have been heard in the last few hours without arousing all the Miskatonic Valley was more than the honest physician could say.

Elwood wrote his part of the colloquy on paper, so that a fairly easy communication was maintained. Neither knew what to make of the whole chaotic business, and decided it would be better if they thought as little as possible about it. Both, though, agreed that they must leave this ancient and accursed house as soon as it could be arranged. Evening papers spoke of a police raid on some curious revellers in a ravine beyond Meadow Hill just before dawn, and mentioned that the white stone there was an object of age-long superstitious regard. Nobody had been caught, but among the scattering fugitives had been glimpsed a huge negro. In another column it was stated that no trace of the missing child Ladislav Wolejko had been found.

The crowning horror came that very night. Elwood will never forget it, and was forced to stay out of college the rest of the term because of the resulting nervous breakdown. He had thought he heard rats in the partition all the evening, but paid little attention to them. Then, long after both he and Gilman had retired, the atrocious shrieking began. Elwood jumped up, turned on the lights and rushed over to his guest's couch. The occupant was emitting sounds of veritably inhuman nature, as if racked by some torment beyond description. He was writhing under the bedclothes, and a great stain was beginning to appear on the blankets.

Elwood scarcely dared to touch him, but gradually the screaming and writhing subsided. By this time Dombrowski, Choynski, Desrochers, Mazurewicz, and the top-floor lodger were all crowding into the doorway, and the landlord had sent his wife back to telephone for Doctor Malkowski. Everybody shrieked when a large rat-like form suddenly jumped out from beneath the ensanguined bedclothes and scuttled across the floor to a fresh, open hole close by. When the doctor arrived and began to pull down those frightful covers Walter Gilman was dead.

It would be barbarous to do more than suggest what had killed Gilman. There had been virtually a tunnel through his

body—something had eaten his heart out. Dombrowski, frantic at the failure of his rat-poisoning efforts, cast aside all thought of his lease and within a week had moved with all his older lodgers to a dingy but less ancient house in Walnut Street. The worst thing for a while was keeping Joe Mazurewicz quiet; for the brooding loom-fixer would never stay sober, and was constantly whining and muttering about spectral and terrible things.

It seems that on that last hideous night Joe had stooped to look at the crimson rat-tracks which led from Gilman's couch to the near-by hole. On the carpet they were very indistinct, but a piece of open flooring intervened between the carpet's edge and the baseboard. There Mazurewicz had found something monstrous—or thought he had, for no one else could quite agree with him despite the undeniable queer-ness of the prints. The tracks on the flooring were certainly vastly unlike the average prints of a rat but even Choynski and Desrochers would not admit that they were like the prints of four tiny human hands.

The house was never rented again. As soon as Dombrowski left it the pall of its final desolation began to descend, for people shunned it both on account of its old reputation and because of the new foetid odour. Perhaps the ex-landlord's rat-poison had worked after all, for not long after his departure the place became a neighbourhood nuisance.

Health officials traced the smell to the closed spaces above and beside the eastern garret room, and agreed that the number of dead rats must be enormous. They decided, however, that it was not worth their while to hew open and disinfect the long-sealed spaces; for the foetor would soon be over, and the locality was not one which encouraged fastidious standards. Indeed, there were always vague local tales of unexplained stench upstair in the Witch-House just after May-Eve and Hallowmass. The neighbours acquiesced in the inertia—but the foetor none the less formed an additional count against the place. Toward the last the house was condemned as a habitation by the building inspector.

Gilman's dreams and their attendant circumstances have never been explained. Elwood, whose thoughts on the entire episode are sometimes almost maddening, came back to college the next autumn and was graduated in the following June. He found the spectral gossip of the town much diminished, and it is indeed a fact that—notwithstanding certain reports of a ghostly tittering in the deserted house which lasted almost as long as that edifice itself—no fresh appearances either of Old Keziah or of Brown Jenkin have been muttered of since Gilman's death.

It is rather fortunate that Elwood was not in Arkham in that later year when certain events abruptly renewed the local whispers about elder horrors. Of course he

heard about the matter afterward and suffered untold torments of black and bewildered speculation; but even that was not as bad as actual nearness and several possible sights would have been.

In March, 1931, a gale wrecked the roof and great chimney of the vacant Witch-House, so that a chaos of crumbling bricks, blackened, moss-grown shingles, and rotting planks and timbers crashed down into the loft and broke through the floor beneath. The whole attic storey was choked with debris from above, but no one took the trouble to touch the mess before the inevitable razing of the decrepit structure. That ultimate step came in the following December, and it was when Gilman's old room was cleared out by reluctant, apprehensive workmen that the gossip began.

Among the rubbish which had crashed through the ancient slanting ceiling were several things which made the workmen pause and call in the police. Later the police in turn called in the coroner and several professors from the university. There were bones—badly crushed and splintered, but clearly recognizable as human—whose manifestly modern date conflicted puzzlingly with the remote period at which their only possible lurking place, the low, slant-floored loft overhead, had supposedly been sealed from all human access. The coroner's physician decided that some belonged to a small child, while certain

others—found mixed with shreds of rotten brownish cloth—belonged to a rather undersized, bent female of advanced years. Careful sifting of debris also disclosed many tiny bones of rats caught in the collapse, as well as older rat-bones gnawed by small fangs in a fashion now and then highly productive of controversy and reflection.

Other objects found included the mangled fragments of many books and papers, together with a yellowish dust left from the total disintegration of still older books and papers. All, without exception, appeared to deal with black magic in its most advanced and horrible forms; and the evidently recent date of certain items is still a mystery as unsolved as that of the modern human bones. An even greater mystery is the absolute homogeneity of the crabbed, archaic writing found on a wide range of papers whose conditions and watermarks suggest age differences of at least one hundred and fifty to two hundred years. To some, though, the greatest mystery of all is the variety of utterly inexplicable objects—objects whose shapes, materials, types of workmanship, and purposes baffle all conjecture—found scattered amidst the wreckage in evidently diverse states of injury. One of these things—which excited several Miskatonic professors profoundly—is a badly damaged monstrosity plainly resembling the strange image which Gilman gave to the college museum,

save that it is large, wrought of some peculiar bluish stone instead of metal, and possessed of a singularly angled pedestal with undecipherable hieroglyphics.

Archaeologists and anthropologists are still trying to explain the bizarre designs chased on a crushed bowl of light metal whose inner side bore ominous brownish stains when found. Foreigners and credulous grandmothers are equally garrulous about the modern nickel crucifix with broken chain mixed in the rubbish and shiveringly identified by Joe Mazurewicz as that which he had given poor Gilman many years before. Some believe this crucifix was dragged up to the sealed loft by rats, while others think it must have been on the floor in some corner of Gilman's old room at the time. Still others, including Joe himself, have theories too wild and fantastic for sober credence.

When the slanting wall of Gilman's room was torn out, the once-sealed triangular space between that partition and the house's north wall was found to contain much less structural debris, even in proportion to its size, than the room itself, though it had a ghastly layer of older materials which paralyzed the wreckers with horror. In brief, the floor was a veritable ossuary of the bones of small children—some fairly modern, but others extending back in infinite gradations to a period so remote that crumbling was almost complete. On this deep bony layer

rested a knife of great size, obvious antiquity, and grotesque, ornate, and exotic design—above which the debris was piled.

In the midst of this debris, wedged between a fallen plank and a cluster of cemented bricks from the ruined chimney, was an object destined to cause more bafflement, veiled fright, and openly superstitious talk in Arkham than anything else discovered in the haunted and accursed building.

This object was the partly crushed skeleton of a huge diseased rat, whose abnormalities of form are still a topic of debate and source of singular reticence among the members of Miskatonic's department of comparative anatomy. Very little concerning this skeleton has leaked out, but the workmen who found it whisper in shocked tones about the long, brownish hairs with which it was associated.

The bones of the tiny paws, it is rumoured, imply prehensile characteristics more typical of a diminutive monkey than of a rat, while the small skull with its savage yellow fangs is of the utmost anomalousness, appearing from certain angles like a miniature, monstrosly degraded parody of a human skull. The workmen crossed themselves in fright when they came upon this blasphemy, but later burned candles of gratitude in St. Stanislaus' Church because of the shrill, ghostly tittering they felt they would never hear again.

1933:

ANOTHER CHANGE *of* ADDRESS.

[RETURN TO TABLE OF CONTENTS]

A deadly combination of Lovecraft's discouragement and a deluge of ghostwriting work—including an 80,000-word novel whose author wanted a professional rewrite—kept Lovecraft's output fairly low again in 1933.

Early in the year, he worked with E. Hoffman Price on a project that had been suggested during the previous summer's travels: a sequel to "The Silver Key," titled "Through the Gates of the Silver Key," which was published under a joint by-line in *Weird Tales* the following year. Because this story is a sequel to one of Lovecraft's stories, we have included it in this edition, even though it's a collaboration.

During that year, Lovecraft and

his one surviving aunt were forced by the continuing deterioration of their financial situation to move yet again, into a smaller residence. Lovecraft was not displeased, because the new house—although their quarters in it were considerably smaller—was more architecturally interesting than the old.

In August, Lovecraft wrote "The Thing on the Doorstep," which he then sent along the rounds of his writer friends for critique, as his habit had latterly become. Some of their comments were diffident enough that Lovecraft shelved the whole thing for two years; it wasn't offered for publication until 1935, at which time it was snapped right up by *Weird Tales*.

The only other fiction Lovecraft

wrote under his own name was a dream-transcript, "The Evil Clergyman," and its publication was a total accident. Lovecraft included it in a letter to his friend Bernard Austin Dwyer. It was published after his death, in 1939, as a short story in *Weird Tales*.

One other interesting thing happened to Lovecraft in 1933—for the first time in his life, he got drunk. On New Year's Eve, one of Sam Loveman's more rascally friends spiked the lifelong teetotaler's drink. Lovecraft, as it turned out, was rather the life of the party when he had a few drinks on board.

THROUGH *the* GATES *of the* SILVER KEY.

[RETURN TO TABLE OF CONTENTS]

WRITTEN IN COLLABORATION WITH E. HOFFMAN PRICE.

I.

In a vast room hung with strangely figured arras and carpeted with Bonkhata rugs of impressive age and workmanship, four men were sitting around a document-strewn table. From the far corners, where odd tripods of wrought iron were now and then replenished by an incredibly aged Negro in somber livery, came the hypnotic fumes of olibanum; while in a deep niche on one side there ticked a curious, coffin-shaped clock whose dial bore baffling hieroglyphs and whose four hands did not move in consonance with any time system known on this planet. It was a singular and disturbing room, but well fitted to the

business then at hand. For there, in the New Orleans home of this continent's greatest mystic, mathematician and orientalist, there was being settled at last the estate of a scarcely less great mystic, scholar, author and dreamer who had vanished from the face of the earth four years before.

Randolph Carter, who had all his life sought to escape from the tedium and limitations of waking reality in the beckoning vistas of dreams and fabled avenues of other dimensions, disappeared from the sight of man on the seventh of October, 1928, at the age of fifty-four. His career had been a strange and lonely one, and there were those who inferred from his curious novels many episodes more bizarre than

any in his recorded history. His association with Harley Warren, the South Carolina mystic whose studies in the primal Naacal language of the Himalayan priests had led to such outrageous conclusions, had been close. Indeed, it was he who—one mist-mad, terrible night in an ancient graveyard—had seen Warren descend into a dank and nitrous vault, never to emerge. Carter lived in Boston, but it was from the wild, haunted hills behind hoary and witch-accursed Arkham that all his forebears had come. And it was amid these ancient, cryptically brooding hills that he had ultimately vanished.

His old servant, Parks—who died early in 1930—had spoken of the strangely aromatic and hideously carved box he had found in the attic, and of the indecipherable parchments and queerly figured silver key which that box had contained: matters of which Carter had also written to others. Carter, he said, had told him that this key had come down from his ancestors, and that it would help him to unlock the gates to his lost boyhood, and to strange dimensions and fantastic realms which he had hitherto visited only in vague, brief, and elusive dreams. Then one day Carter took the box and its contents and rode away in his car, never to return.

Later on, people found the car at the side of an old, grass-grown road in the hills behind crumbling Arkham—the hills where Carter's forebears had once dwelt, and where

the ruined cellar of the great Carter homestead still gaped to the sky. It was in a grove of tall elms near by that another of the Carters had mysteriously vanished in 1781, and not far away was the half-rotted cottage where Goody Fowler, the witch, had brewed her ominous potions still earlier. The region had been settled in 1692 by fugitives from the witchcraft trials in Salem, and even now it bore a name for vaguely ominous things scarcely to be envisaged. Edmund Carter had fled from the shadow of Gallows Hill just in time, and the tales of his sorceries were many. Now, it seemed, his lone descendant had gone somewhere to join him.

In the car they found the hideously carved box of fragrant wood, and the parchment which no man could read. The silver key was gone—presumably with Carter. Further than that there was no certain clue. Detectives from Boston said that the fallen timbers of the old Carter place seemed oddly disturbed, and somebody found a handkerchief on the rock-ridged, sinisterly wooded slope behind the ruins near the dreaded cave called the Snake Den.

It was then that the country legends about the Snake Den gained a new vitality. Farmers whispered of the blasphemous uses to which old Edmund Carter the wizard had put that horrible grotto, and added later tales about the fondness which Randolph Carter himself had had

for it when a boy. In Carter's boyhood the venerable gambrel-roofed homestead was still standing and tenanted by his great-uncle Christopher. He had visited there often, and had talked singularly about the Snake Den. People remembered what he had said about a deep fissure and an unknown inner cave beyond, and speculated on the change he had shown after spending one whole memorable day in the cavern when he was nine. That was in October, too—and ever after that he had seemed to have a uncanny knack at prophesying future events.

It had rained late in the night that Carter vanished, and no one was quite able to trace his footprints from the car. Inside the Snake Den all was amorphous liquid mud, owing to the copious seepage. Only the ignorant rustics whispered about the prints they thought they spied where the great elms overhang the road, and on the sinister hillside near the Snake Den, where the handkerchief was found. Who could pay attention to whispers that spoke of stubby little tracks like those which Randolph Carter's square-toed boots made when he was a small boy? It was as crazy a notion as that other whisper—that the tracks of old Benijah Corey's peculiar heelless boots had met the stubby little tracks in the road. Old Benijah had been the Carters' hired man when Randolph was young; but he had died thirty years ago.

It must have been these whispers

plus Carter's own statement to Parks and others that the queerly arabesqued silver key would help him unlock the gates of his lost boyhood—which caused a number of mystical students to declare that the missing man had actually doubled back on the trail of time and returned through forty-five years to that other October day in 1883 when he had stayed in the Snake Den as a small boy. When he came out that night, they argued, he had somehow made the whole trip to 1928 and back; for did he not thereafter know of things which were to happen later? And yet he had never spoken of anything to happen after 1928.

One student—an elderly eccentric of Providence, Rhode Island, who had enjoyed a long and close correspondence with Carter—had a still more elaborate theory, and believed that Carter had not only returned to boyhood, but achieved a further liberation, roving at will through the prismatic vistas of boyhood dream. After a strange vision this man published a tale of Carter's vanishing in which he hinted that the lost one now reigned as king on the opal throne of Ilel-Vad, that fabulous town of turrets atop the hollow cliffs of glass overlooking the twilight sea wherein the bearded and finny Gniorri build their singular labyrinths.

It was this old man, Ward Phillips, who pleaded most loudly against the apportionment of

Carter's estate to his heirs—all distant cousins—on the ground that he was still alive in another time-dimension and might well return some day. Against him was arrayed the legal talent of one of the cousins, Ernest K. Aspinwall of Chicago, a man ten years Carter's senior, but keen as a youth in forensic battles. For four years the contest had raged, but now the time for apportionment had come, and this vast, strange room in New Orleans was to be the scene of the arrangement.

It was the home of Carter's literary and financial executor—the distinguished Creole student of mysteries and Eastern antiquities, Étienne-Laurent de Marigny. Carter had met de Marigny during the war, when they both served in the French Foreign Legion, and had at once cleaved to him because of their similar tastes and outlook. When, on a memorable joint furlough, the learned young Creole had taken the wistful Boston dreamer to Bayonne, in the south of France, and had shown him certain terrible secrets in the nighted and immemorial crypts that burrow beneath that brooding, eon-weighted city, the friendship was forever sealed. Carter's will had named de Marigny as executor, and now that avid scholar was reluctantly presiding over the settlement of the estate. It was sad work for him, for like the old Rhode Islander he did not believe that Carter was dead. But what weight had the dreams of

mystics against the harsh wisdom of the world?

Around the table in that strange room in the old French Quarter sat the men who claimed an interest in the proceedings. There had been the usual legal advertisements of the conference in papers wherever Carter's heirs were thought to live; yet only four now sat listening to the abnormal ticking of that coffin-shaped clock which told no earthly time, and to the bubbling of the courtyard fountain beyond half-curtained, fan-lighted windows. As the hours wore on, the faces of the four were half shrouded in the curling fumes from the tripods, which, piled recklessly with fuel, seemed to need less and less attention from the silently gliding and increasingly nervous old Negro.

There was Étienne de Marigny himself—slim, dark, handsome, mustached, and still young. Aspinwall, representing the heirs, was white-haired, apoplectic-faced, side-whiskered, and portly. Phillips, the Providence mystic, was lean, gray, long-nosed, clean-shaven, and stoop-shouldered. The fourth man was non-committal in age—lean, with a dark, bearded, singularly immobile face of very regular contour, bound with the turban of a high-caste Brahman and having night-black, burning, almost irisless eyes which seemed to gaze out from a vast distance behind the features. He had announced himself as the Swami Chandraputra, an adept from

Benares, with important information to give; and both de Marigny and Phillips—who had corresponded with him—had been quick to recognize the genuineness of his mystical pretensions. His speech had an oddly forced, hollow, metallic quality, as if the use of English taxed his vocal apparatus; yet his language was as easy, correct and idiomatic as any native Anglo-Saxon's. In general attire he was the normal European civilian, but his loose clothes sat peculiarly badly on him, while his bushy black beard, Eastern turban, and large, white mittens gave him an air of exotic eccentricity.

De Marigny, fingering the parchment found in Carter's car, was speaking.

"No, I have not been able to make anything of the parchment. Mr. Phillips, here, also gives it up. Colonel Churchward declares it is not Naacal, and it looks nothing at all like the hieroglyphics on that Easter Island war-club. The carvings on that box, though, do strangely suggest Easter Island images. The nearest thing I can recall to these parchment characters—notice how all the letters seem to hang down from horizontal word-bar—is the writing in a book poor Harley Warren once had. It came from India while Carter and I were visiting him in 1919, and he never would tell us anything about it—said it would be better if we didn't know, and hinted that it might have come originally from some place other than the

Earth. He took it with him in December, when he went down into the vault in that old graveyard—but neither he nor the book ever came to the surface again. Some time ago I sent our friend here—the Swami Chandraputra—a memory-sketch of some of those letters, and also a photostatic copy of the Carter parchment. He believes he may be able to shed light on them after certain references and consultations.

"But the key—Carter sent me a photograph of that. Its curious arabesques were not letters, but seem to have belonged to the same culture-tradition as the parchment. Carter always spoke of being on the point of solving the mystery, though he never gave details. Once he grew almost poetic about the whole business. That antique silver key, he said, would unlock the successive doors that bar our free march down the mighty corridors of space and time to the very Border which no man has crossed since Shaddad with his terrific genius built and concealed in the sands of Arabia Petraea the prodigious domes and uncounted minarets of thousand-pillared Irem. Half-starved dervishes—wrote Carter—and thirst-crazed nomads have returned to tell of that monumental portal, and of the hand that is sculptured above the keystone of the arch, but no man has passed and retraced his steps to say that his footprints on the garnet-strewn sands within bear witness to his visit. The

key, he surmised, was that for which the cyclopean sculptured hand vainly grasps.

"Why Carter didn't take the parchment as well as the key, we can not say. Perhaps he forgot it—or perhaps he forbore to take it through recollection of one who had taken a book of like characters into a vault and never returned. Or perhaps it was really immaterial to what he wished to do."

As de Marigny paused, old Mr. Phillips spoke in a harsh, shrill voice.

"We can know of Randolph Carter's wandering only what we dream. I have been to many strange places in dreams, and have heard many strange and significant things in Ulthar, beyond the River Skai. It does not appear that the parchment was needed, for certainly Carter reentered the world of his boyhood dreams, and is now a king in Ilek-Vad."

Mr. Aspinwall grew doubly apoplectic-looking as he sputtered: "Can't somebody shut the old fool up? We've had enough of these moonings. The problem is to divide the property, and it's about time we got to it."

For the first time Swami Chandraputra spoke in his queerly alien voice.

"Gentlemen, there is more to this matter than you think. Mr. Aspinwall does not do well to laugh at the evidence of dreams. Mr. Phillips has taken an incomplete view—perhaps because he has not

dreamed enough. I, myself, have done much dreaming. We in India have always done that, just as all the Carters seem to have done it. You, Mr. Aspinwall, as a maternal cousin, are naturally not a Carter. My own dreams, and certain other sources of information, have told me a great deal which you still find obscure. For example, Randolph Carter forgot that parchment which he couldn't decipher—yet it would have been well for him had he remembered to take it. You see, I have really learned pretty much what happened to Carter after he left his car with the silver key at sunset on that seventh of October, four years ago."

Aspinwall audibly sneered, but the others sat up with heightened interest. The smoke from the tripods increased, and the crazy ticking of that coffin-shaped clock seemed to fall into bizarre patterns like the dots and dashes of some alien and insoluble telegraph message from outer space. The Hindoo leaned back, half closed his eyes, and continued in that oddly labored yet idiomatic speech, while before his audience there began to float a picture of what had happened to Randolph Carter.

II.

The hills beyond Arkham are full of a strange magic—something, perhaps, which the old wizard Edmund Carter called down from the stars and up from the crypts of

nether earth when he fled there from Salem in 1692. As soon as Randolph Carter was back among them he knew that he was close to one of the gates which a few audacious, abhorred and alien-souled men have blasted through titan walls betwixt the world and the outside absolute. Here, he felt, and on this day of the year, he could carry out with success the message he had deciphered months before from the arabesques of that tarnished and incredibly ancient silver key. He knew now how it must be rotated, and how it must be held up to the setting sun, and what syllables of ceremony must be intoned into the void at the ninth and last turning. In a spot as close to a dark polarity and induced gate as this, it could not fail in its primary functions. Certainly, he would rest that night in the lost boyhood for which he had never ceased to mourn.

He got out of the car with the key in his pocket, walking up-hill deeper and deeper into the shadowy core of that brooding, haunted countryside of winding road, vine-grown stone wall, black woodland, gnarled, neglected orchard, gaping-windowed, deserted farm-house, and nameless ruin. At the sunset hour, when the distant spires of Kingsport gleamed in the ruddy blaze, he took out the key and made the needed turnings and intonations. Only later did he realize how soon the ritual had taken effect.

Then in the deepening twilight he had heard a voice out of the past: Old Benijah Corey, his great-uncle's hired man. Had not old Benijah been dead for thirty years? Thirty years before when. What was time? Where had he been? Why was it strange that Benijah should be calling him on this seventh of October 1883? Was he not out later than Aunt Martha had told him to stay? What was this key in his blouse pocket, where his little telescope—given him by his father on his ninth birthday, two months before—ought to be? Had he found it in the attic at home? Would it unlock the mystic pylon which his sharp eye had traced amidst the jagged rocks at the back of that inner cave behind the Snake Den on the hill? That was the place they always coupled with old Edmund Carter the wizard. People wouldn't go there, and nobody but him had ever noticed or squirmed through the root-choked fissure to that great black inner chamber with the pylon. Whose hands had carved that hint of a pylon out of the living rock? Old Wizard Edmund's—or others that he had conjured up and commanded?

That evening little Randolph ate supper with Uncle Chris and Aunt Martha in the old gambrel-roofed farm-house.

Next morning he was up early and out through the twisted-boughed apple orchard to the upper timber lot where the mouth of the Snake Den lurked black and forbidding

amongst grotesque, overnourished oaks. A nameless expectancy was upon him, and he did not even notice the loss of his handkerchief as he fumbled in his blouse pocket to see if the queer silver key was safe. He crawled through the dark orifice with tense, adventurous assurance, lighting his way with matches taken from the sitting-room. In another moment he had wriggled through the root-choked fissure at the farther end, and was in the vast, unknown inner grotto whose ultimate rock wall seemed half like a monstrous and consciously shapen pylon. Before that dank, dripping wall he stood silent and awestruck, lighting one match after another as he gazed. Was that stony bulge above the keystone of the imagined arch really a gigantic sculptured hand? Then he drew forth the silver key, and made motions and intonations whose source he could only dimly remember. Was anything forgotten? He knew only that he wished to cross the barrier to the untrammelled land of his dreams and the gulfs where all dimensions dissolved in the absolute.

III.

What happened then is scarcely to be described in words. It is full of those paradoxes, contradictions and anomalies which have no place in waking life, but which fill our more fantastic dreams and are taken as matters of course till we

return to our narrow, rigid, objective world of limited causation and tri-dimensional logic. As the Hindoo continued his tale, he had difficulty in avoiding what seemed—even more than the notion of a man transferred through the years to boyhood—an air of trivial, puerile extravagance. Mr. Aspinwall, in disgust, gave an apoplectic snort and virtually stopped listening.

For the rite of the silver key, as practiced by Randolph Carter in that black, haunted cave within a cave, did not prove unavailing. From the first gesture and syllable an aura of strange, awesome mutation was apparent—a sense of incalculable disturbance and confusion in time and space, yet one which held no hint of what we recognize as motion and duration. Imperceptibly, such things as age and location ceased to have any significance whatever. The day before, Randolph Carter had miraculously leaped a gulf of years. Now there was no distinction between boy and man. There was only the entity Randolph Carter, with a certain store of images which had lost all connection with terrestrial scenes and circumstances of acquisition. A moment before, there had been an inner cave with vague suggestions of a monstrous arch and gigantic sculptured hand on the farther wall. Now there was neither cave nor absence of cave; neither wall nor absence of wall. There was only a flux of impressions not so much

visual as cerebral, amidst which the entity that was Randolph Carter experienced perceptions or registrations of all that his mind revolved on, yet without any clear consciousness of the way in which he received them.

By the time the rite was over, Carter knew that he was in no region whose place could be told by Earth's geographers, and in no age whose date history could fix; for the nature of what was happening was not wholly unfamiliar to him. There were hints of it in the cryptical Pnakotic fragments, and a whole chapter in the forbidden Necronomicon of the mad Arab, Abdul Alhazred, had taken on significance when he had deciphered the designs graven on the silver key. A gate had been unlocked—not, indeed, the Ultimate Gate, but one leading from Earth and time to that extension of Earth which is outside time, and from which in turn the Ultimate Gate leads fearsomely and perilously to the last Void which is outside all earths, all universes, and all matter.

There would be a Guide—and a very terrible one; a Guide who had been an entity of Earth millions of years before, when man was undreamed of, and when forgotten shapes moved on a steaming planet building strange cities among whose last, crumbling ruins the first mammals were to play. Carter remembered what the monstrous Necronomicon had vaguely and

disconcertingly adumbrated concerning that Guide:

“And while there are those,” the mad Arab had written, “who have dared to seek glimpses beyond the Veil, and to accept HIM as guide, they would have been more prudent had they avoided commerce with HIM; for it is written in the Book of Thoth how terrific is the price of a single glimpse. Nor may those who pass ever return, for in the vastnesses transcending our world are shapes of darkness that seize and bind. The Affair that shamleth about in the night, the evil that defieth the Elder Sign, the Herd that stand watch at the secret portal each tomb is known to have and that thrive on that which groweth out of the tenants thereof:—all these Blacknesses are lesser than HE WHO guardeth the Gateway: HE WHO will guide the rash one beyond all the worlds into the Abyss of unnamable devourers. For He is 'UMR AT-TAWIL, the Most Ancient One, which the scribe rendereth as THE PROLONGED OF LIFE.”

Memory and imagination shaped dim half-pictures with uncertain outlines amidst the seething chaos, but Carter knew that they were of memory and imagination only. Yet he felt that it was not chance which built these things in his consciousness, but rather some vast reality, ineffable and undimensioned, which surrounded him and strove to translate itself into the only symbols he was capable of grasping.

For no mind of Earth may grasp the extensions of shape which interweave in the oblique gulfs outside time and the dimensions we know.

There floated before Carter a cloudy pageantry of shapes and scenes which he somehow linked with Earth's primal, eon-forgotten past. Monstrous living things moved deliberately through vistas of fantastic handiwork that no sane dream ever held, and landscapes bore incredible vegetation and cliffs and mountains and masonry of no human pattern. There were cities under the sea, and denizens thereof; and towers in great deserts where globes and cylinders and nameless winged entities shot off into space, or hurtled down out of space. All this Carter grasped, though the images bore no fixed relation to one another or to him. He himself had no stable form or position, but only such shifting hints of form and position as his whirling fancy supplied.

He had wished to find the enchanted regions of his boyhood dreams, where galleys sail up the river Oukranos past the gilded spires of Thran, and elephant caravans tramp through perfumed jungles in Kied, beyond forgotten palaces with veined ivory columns that sleep lovely and unbroken under the moon. Now, intoxicated with wider visions, he scarcely knew what he sought. Thoughts of infinite and blasphemous daring rose in his mind, and he knew he would face the dreaded Guide without fear, asking

monstrous and terrible things of him.

All at once the pageant of impressions seemed to achieve a vague kind of stabilization. There were great masses of towering stone, carved into alien and incomprehensible designs and disposed according to the laws of some unknown, inverse geometry. Light filtered from a sky of no assignable colour in baffling, contradictory directions, and played almost sentiently over what seemed to be a curved line of gigantic hieroglyphed pedestals more hexagonal than otherwise, and surmounted by cloaked, ill-defined shapes.

There was another shape, too, which occupied no pedestal, but which seemed to glide or float over the cloudy, floor-like lower level. It was not exactly permanent in outline, but held transient suggestions of something remotely preceding or paralleling the human form, though half as large again as an ordinary man. It seemed to be heavily cloaked, like the shapes on the pedestals, with some neutral-coloured fabric; and Carter could not detect any eye-holes through which it might gaze. Probably it did not need to gaze, for it seemed to belong to an order of beings far outside the merely physical in organization and faculties.

A moment later Carter knew that this was so, for the Shape had spoken to his mind without sound or language. And though the name it uttered was a dreaded and terrible one, Randolph Carter did not flinch in fear.

Instead, he spoke back, equally without sound or language, and made those obeisances which the hideous Necronomicon had taught him to make. For this shape was nothing less than that which all the world has feared since Lomar rose out of the sea, and the Children of the Fire Mist came to Earth to teach the Elder Lore to man. It was indeed the frightful Guide and Guardian of the Gate—'UMR AT-TAWIL, the ancient one, which the scribe rendereth the PROLONGED OF LIFE.

The Guide knew, as he knew all things, of Carter's quest and coming, and that this seeker of dreams and secrets stood before him unafraid. There was no horror or malignity in what he radiated, and Carter wondered for a moment whether the mad Arab's terrific blasphemous hints came from envy and a baffled wish to do what was now about to be done. Or perhaps the Guide reserved his horror and malignity for those who feared. As the radiations continued, Carter eventually interpreted them in the form of words.

"I am indeed that Most Ancient One," said the Guide, "of whom you know. We have awaited you—the Ancient Ones and I. You are welcome, even though long delayed. You have the key, and have unlocked the First Gate. Now the Ultimate Gate is ready for your trial. If you fear, you need not advance. You may still go back unharmed, the way you

came. But if you chose to advance—"

The pause was ominous, but the radiations continued to be friendly. Carter hesitated not a moment, for a burning curiosity drove him on.

"I will advance," he radiated back, "and I accept you as my Guide."

At this reply the Guide seemed to make a sign by certain motions of his robe which may or may not have involved the lifting of an arm or some homologous member. A second sign followed, and from his well-learned lore Carter knew that he was at last very close to the Ultimate Gate. The light now changed to another inexplicable colour, and the shapes on the quasi-hexagonal pedestals became more clearly defined. As they sat more erect, their outlines became more like those of men, though Carter knew that they could not be men. Upon their cloaked heads there now seemed to rest tall, uncertainly coloured miters, strangely suggestive of those on certain nameless figures chiseled by a forgotten sculptor along the living cliffs of a high, forbidden mountain in Tartary; while grasped in certain folds of their swathings were long sceptres whose carved heads bodied forth a grotesque and archaic mystery.

Carter guessed what they were and whence they came, and Whom they served; and guessed, too, the price of their service. But he was still content, for at one mighty venture he was to learn all. Damnation, he reflected, is but a word bandied about

by those whose blindness leads them to condemn all who can see, even with a single eye. He wondered at the vast conceit of those who had babbled of the malignant Ancient Ones, as if They could pause from their everlasting dreams to wreak a wrath on mankind. As well, he thought, might a mammoth pause to visit frantic vengeance on an angworm. Now the whole assemblage on the vaguely hexagonal pillars was greeting him with a gesture of those oddly carven sceptres and radiating a message which he understood:

“We salute you, Most Ancient One, and you, Randolph Carter, whose daring has made you one of us.”

Carter saw now that one of the pedestals was vacant, and a gesture of the Most Ancient One told him it was reserved for him. He saw also another pedestal, taller than the rest, and at the center of the oddly curved line—neither semicircle nor ellipse, parabola nor hyperbola—which they formed. This, he guessed, was the Guide’s own throne. Moving and rising in a manner hardly definable, Carter took his seat; and as he did so he saw that the Guide had seated himself.

Gradually and mistily it became apparent that the Most Ancient One was holding something—some object clutched in the outflung folds of his robe as if for the sight, or what answered for sight, of the cloaked Companions. It was a large sphere,

or apparent sphere, of some obscurely iridescent metal, and as the Guide put it forward a low, pervasive half-impression of sound began to rise and fall in intervals which seemed to be rhythmic even though they followed no rhythm of Earth. There was a suggestion of chanting or what human imagination might interpret as chanting. Presently the quasi-sphere began to grow luminous, and as it gleamed up into a cold, pulsating light of unassignable colour, Carter saw that its flickerings conformed to the alien rhythm of the chant. Then all the mitered, scepter-bearing Shapes on the pedestals commenced a slight, curious swaying in the same inexplicable rhythm, while nimbuses of unclassifiable light—resembling that of the quasi-sphere—played around their shrouded heads.

The Hindoo paused in his tale and looked curiously at the tall, coffin-shaped clock with the four hands and hieroglyphed dial, whose crazy ticking followed no known rhythm of Earth.

“You, Mr. de Marigny,” he suddenly said to his learned host, “do not need to be told the particularly alien rhythm to which those cowed Shapes on the hexagonal pillars chanted and nodded. You are the only one else—in America—who has had a taste of the Outer Extension. That clock—I suppose it was sent to you by the Yogi poor

Harley Warren used to talk about—the seer who said that he alone of living men had been to Yian-Ho, the hidden legacy of eon-old Leng, and had borne certain things away from that dreadful and forbidden city. I wonder how many of its subtler properties you know? If my dreams and readings be correct, it was made by those who knew much of the First Gateway. But let me go on with my tale.”

At last, continued the Swami, the swaying and the suggestion of chanting ceased, the lambent nimbuses around the now drooping and motionless heads faded, while the cloaked shapes slumped curiously on their pedestals. The quasi-sphere, however, continued to pulsate with inexplicable light. Carter felt that the Ancient Ones were sleeping as they had been when he first saw them, and he wondered out of what cosmic dreams his coming had aroused them. Slowly there filtered into his mind the truth that this strange chanting ritual had been one of instruction, and that the Companions had been chanted by the Most Ancient One into a new and peculiar kind of sleep in order that their dreams might open the Ultimate Gate to which the silver key was a passport. He knew that in the profundity of this deep sleep they were contemplating unplumbed vastnesses of utter and

absolute outsidersness, and that they were to accomplish that which his presence had demanded.

The Guide did not share this sleep, but seemed still to be giving instructions in some subtle, soundless way. Evidently he was implanting images of those things which he wished the Companions to dream: and Carter knew that as each of the Ancient Ones pictured the prescribed thought, there would be born the nucleus of a manifestation visible to his earthly eyes. When the dreams of all the Shapes had achieved a oneness, that manifestation would occur, and everything he required be materialized, through concentration. He had seen such things on Earth—in India, where the combined, projected will of a circle of adepts can make a thought take tangible substance, and in hoary Atlaanat, of which few even dare speak.

Just what the Ultimate Gate was, and how it was to be passed, Carter could not be certain; but a feeling of tense expectancy surged over him. He was conscious of having a kind of body, and of holding the fateful silver key in his hand. The masses of towering stone opposite him seemed to possess the evenness of a wall, toward the centre of which his eyes were irresistibly drawn. And then suddenly he felt the mental currents of the Most Ancient One cease to flow forth.

For the first time Carter realized how terrific utter silence, mental and physical, may be. The earlier

moments had never failed to contain some perceptible rhythm, if only the faint, cryptical pulse of the Earth's dimensional extension, but now the hush of the abyss seemed to fall upon everything. Despite his intimations of body, he had no audible breath, and the glow of 'Umr at-Tawil's quasi-sphere had grown petrifiedly fixed and unpulsating. A potent nimbus, brighter than those which had played round the heads of the Shapes, blazed frozenly over the shrouded skull of the terrible Guide.

A dizziness assailed Carter, and his sense of lost orientation waxed a thousandfold. The strange lights seemed to hold the quality of the most impenetrable blacknesses heaped upon blacknesses while about the Ancient Ones, so close on their pseudo-hexagonal thrones, there hovered an air of the most stupefying remoteness. Then he felt himself wafted into immeasurable depths, with waves of perfumed warmth lapping against his face. It was as if he floated in a torrid, rose-tintured sea; a sea of drugged wine whose waves broke foaming against shores of brazen fire. A great fear clutched him as he half saw that vast expanse of surging sea lapping against its far off coast. But the moment of silence was broken—the surgings were speaking to him in a language that was not of physical sound or articulate words.

"The Man of Truth is beyond good and evil," intoned the voice that was not a voice. "The Man of

Truth has ridden to All-Is-One. The Man of Truth has learned that Illusion is the One Reality, and that Substance is the Great Impostor."

And now, in that rise of masonry to which his eyes had been so irresistibly drawn, there appeared the outline of a titanic arch not unlike that which he thought he had glimpsed so long ago in that cave within a cave, on the far, unreal surface of the three-dimensioned Earth. He realized that he had been using the silver key—moving it in accord with an unlearned and instinctive ritual closely akin to that which had opened the Inner Gate. That rose-drunken sea which lapped his cheeks was, he realized, no more or less than the adamantine mass of the solid wall yielding before his spell, and the vortex of thought with which the Ancient Ones had aided his spell. Still guided by instinct and blind determination, he floated forward—and through the Ultimate Gate.

IV.

Randolph Carter's advance through the cyclopean bulk of masonry was like a dizzy precipitation through the measureless gulfs between the stars. From a great distance he felt triumphant, godlike surges of deadly sweetness, and after that the rustling of great wings, and impressions of sound like the chirpings and murmurings of objects

unknown on Earth or in the solar system. Glancing backward, he saw not one gate alone but a multiplicity of gates, at some of which clamoured Forms he strove not to remember.

And then, suddenly, he felt a greater terror than that which any of the Forms could give—a terror from which he could not flee because it was connected with himself. Even the First Gateway had taken something of stability from him, leaving him uncertain about his bodily form and about his relationship to the mistily defined objects around him, but it had not disturbed his sense of unity. He had still been Randolph Carter, a fixed point in the dimensional seething. Now, beyond the Ultimate Gateway, he realized in a moment of consuming fright that he was not one person, but many persons.

He was in many places at the same time. On Earth, on October 7, 1883, a little boy named Randolph Carter was leaving the Snake Den in the hushed evening light and running down the rocky slope, and through the twisted-boughed orchard toward his Uncle Christopher's house in the hills beyond Arkham; yet at that same moment, which was also somehow in the earthly year of 1928, a vague shadow not less Randolph Carter was sitting on a pedestal among the Ancient Ones in Earth's transdimensional extension. Here, too, was a third Randolph Carter, in the

unknown and formless cosmic abyss beyond the Ultimate Gate. And elsewhere, in a chaos of scenes whose infinite multiplicity and monstrous diversity brought him close to the brink of madness, were a limitless confusion of beings which he knew were as much himself as the local manifestation now beyond the Ultimate Gate.

There were Carters in settings belonging to every known and suspected age of Earth's history, and to remoter ages of earthly entity transcending knowledge, suspicion, and credibility; Carters of forms both human and non-human, vertebrate and invertebrate, conscious and mindless, animal and vegetable. And more, there were Carters having nothing in common with earthly life, but moving outrageously amidst backgrounds of other planets and systems and galaxies and cosmic continua; spores of eternal life drifting from world to world, universe to universe, yet all equally himself. Some of the glimpses recalled dreams—both faint and vivid, single and persistent—which he had had through the long years since he first began to dream; and a few possessed a haunting, fascinating and almost horrible familiarity which no earthly logic could explain.

Faced with this realization, Randolph Carter reeled in the clutch of supreme horror—horror such as had not been hinted even at the climax of that hideous night when two had ventured into an ancient

and abhorred necropolis under a waning moon and only one had emerged. No death, no doom, no anguish can arouse the surpassing despair which flows from a loss of identity. Merging with nothingness is peaceful oblivion; but to be aware of existence and yet to know that one is no longer a definite being distinguished from other beings—that one no longer has a self—that is the nameless summit of agony and dread.

He knew that there had been a Randolph Carter of Boston, yet could not be sure whether he—the fragment or facet of an entity beyond the Ultimate Gate—had been that one or some other. His self had been annihilated; and yet he—if indeed there could, in view of that utter nullity of individual existence, be such a thing as he—was equally aware of being in some inconceivable way a legion of selves. It was as though his body had been suddenly transformed into one of those many-limbed and many-headed effigies sculptured in Indian temples, and he contemplated the aggregation in a bewildered attempt to discern which was the original and which the additions—if indeed (supremely monstrous thought!) there were any original as distinguished from other embodiments.

Then, in the midst of these devastating reflections, Carter's beyond-the-gate fragment was hurled from what had seemed the nadir of horror to black, clutching

pits of a horror still more profound. This time it was largely external—a force of personality which at once confronted and surrounded and pervaded him, and which in addition to its local presence, seemed also to be a part of himself, and likewise to be co-existent with all time and conterminous with all space. There was no visual image, yet the sense of entity and the awful concept of combined localism and identity and infinity lent a paralyzing terror beyond anything which any Carter-fragment had hitherto deemed capable of existing.

In the face of that awful wonder, the quasi-Carter forgot the horror of destroyed individuality. It was an All-in-One and One-in-All of limitless being and self—not merely a thing of one space-time continuum, but allied to the ultimate animating essence of existence's whole unbounded sweep—the last, utter sweep which has no confines and which outreaches fancy and mathematics alike. It was perhaps that which certain secret cults of Earth had whispered of as Yog-Sothoth, and which has been a deity under other names; that which the crustaceans of Yuggoth worship as the Beyond-One, and which the vaporous brains of the spiral nebulae know by an untranslatable sign—yet in a flash the Carter-facet realized how slight and fractional all these conceptions are.

And now the Being was addressing the Carter-facet in

prodigious waves that smote and burned and thundered—a concentration of energy that blasted its recipient with well-nigh unendurable violence, and that paralleled in an unearthly rhythm the curious swaying of the Ancient Ones, and the flickering of the monstrous lights, in that baffling region beyond the First Gate. It was as though suns and worlds and universes had converged upon one point whose very position in space they had conspired to annihilate with an impact of resistless fury. But amidst the greater terror one lesser terror was diminished; for the searing waves appeared somehow to isolate the Beyond-the-Gate Carter from his infinity of duplicates—to restore, as it were, a certain amount of the illusion of identity. After a time the hearer began to translate the waves into speech-forms known to him, and his sense of horror and oppression waned. Fright became pure awe, and what had seemed blasphemously abnormal seemed now only ineffably majestic.

"Randolph Carter," it seemed to say, "my manifestations on your planet's extension, the Ancient Ones, have sent you as one who would lately have returned to small lands of dream which he had lost, yet who with greater freedom has risen to greater and nobler desires and curiosities. You wished to sail up golden Oukranos, to search out forgotten ivory cities in orchid-heavy Kied, and to reign on the opal throne of

Ilek-Vad, whose fabulous towers and numberless domes rise mighty toward a single red star in a firmament alien to your Earth and to all matter. Now, with the passing of two Gates, you wish loftier things. You would not flee like a child from a scene disliked to a dream beloved, but would plunge like a man into that last and inmost of secrets which lies behind all scenes and dreams.

"What you wish, I have found good; and I am ready to grant that which I have granted eleven times only to beings of your planet—five times only to those you call men, or those resembling them. I am ready to show you the Ultimate Mystery, to look on which is to blast a feeble spirit. Yet before you gaze full at that last and first of secrets you may still wield a free choice, and return if you will through the two Gates with the Veil still unrent before our eyes."

V.

A sudden shutting-off of the waves left Carter in a chilling and awesome silence full of the spirit of desolation. On every hand pressed the illimitable vastness of the void; yet the seeker knew that the Being was still there. After a moment he thought of words whose mental substance he flung into the abyss: "I accept. I will not retreat."

The waves surged forth again, and Carter knew that the Being had heard. And now there poured from

that limitless Mind a flood of knowledge and explanation which opened new vistas to the seeker, and prepared him for such a grasp of the cosmos as he had never hoped to possess. He was told how childish and limited is the notion of a tri-dimensional world, and what an infinity of directions there are besides the known directions of up-down, forward-backward, right-left. He was shown the smallness and tinsel emptiness of the little Earth gods, with their petty, human interests and connections—their hatreds, rages, loves and vanities; their craving for praise and sacrifice, and their demands for faiths contrary to reason and nature.

While most of the impressions translated themselves to Carter as words there were others to which other senses gave interpretation. Perhaps with eyes and perhaps with imagination he perceived that he was in a region of dimensions beyond those conceivable to the eye and brain of man. He saw now, in the brooding shadows of that which had been first a vortex of power and then an illimitable void, a sweep of creation that dizzied his senses. From some inconceivable vantagepoint he looked upon prodigious forms whose multiple extensions transcended any conception of being, size and boundaries which his mind had hitherto been able to hold, despite a lifetime of cryptical study. He began to understand dimly why there could exist at the same time the little boy

Randolph Carter in the Arkham farm-house in 1883, the misty form on the vaguely hexagonal pillar beyond the First Gate, the fragment now facing the Presence in the limitless abyss, and all the other Carters his fancy or perception envisaged.

Then the waves increased in strength and sought to improve his understanding, reconciling him to the multiform entity of which his present fragment was an infinitesimal part. They told him that every figure of space is but the result of the intersection by a plane of some corresponding figure of one more dimension—as a square is cut from a cube, or a circle from a sphere. The cube and sphere, of three dimensions, are thus cut from corresponding forms of four dimensions, which men know only through guesses and dreams; and these in turn are cut from forms of five dimensions, and so on up to the dizzy and reachless heights of archetypal infinity. The world of men and of the gods of men is merely an infinitesimal phase of an infinitesimal thing—the three-dimensional phase of that small wholeness reached by the First Gate, where 'Umr at-Tawil dictates dreams to the Ancient Ones. Though men hail it as reality, and brand thoughts of its many-dimensioned original as unreality, it is in truth the very opposite. That which we call substance and reality is shadow and illusion, and that which we call shadow and illusion is substance and reality.

Time, the waves went on, is

motionless, and without beginning or end. That it has motion and is the cause of change is an illusion. Indeed, it is itself really an illusion, for except to the narrow sight of beings in limited dimensions there are no such things as past, present and future. Men think of time only because of what they call change, yet that too is illusion. All that was, and is, and is to be, exists simultaneously.

These revelations came with a god like solemnity which left Carter unable to doubt. Even though they lay almost beyond his comprehension, he felt that they must be true in the light of that final cosmic reality which belies all local perspectives and narrow partial views; and he was familiar enough with profound speculations to be free from the bondage of local and partial conceptions. Had his whole quest not been based upon a faith in the unreality of the local and partial?

After an impressive pause the waves continued, saying that what the denizens of few-dimensioned zones call change is merely a function of their consciousness, which views the external world from various cosmic angles. As the shapes produced by the cutting of a cone seem to vary with the angles of cutting—being circle, ellipse, parabola or hyperbola according to that angle, yet without any change in the cone itself—so do the local aspects of an unchanged and endless reality seem to change with the cosmic angle of regarding. To this

variety of angles of consciousness the feeble beings of the inner worlds are slaves, since with rare exceptions they can not learn to control them. Only a few students of forbidden things have gained inklings of this control, and have thereby conquered time and change. But the entities outside the Gates command all angles, and view the myriad parts of the cosmos in terms of fragmentary change-involving perspective, or of the changeless totality beyond perspective, in accordance with their will.

As the waves paused again, Carter began to comprehend, vaguely and terrifiedly, the ultimate background of that riddle of lost individuality which had at first so horrified him. His intuition pieced together the fragments of revelation, and brought him closer and closer to a grasp of the secret. He understood that much of the frightful revelation would have come upon him—splitting up his ego amongst myriads of earthly counterparts inside the First Gate, had not the magic of 'Umr at-Tawil kept it from him in order that he might use the silver key with precision for the Ultimate Gate's opening. Anxious for clearer knowledge, he sent out waves of thought, asking more of the exact relationship between his various facets—the fragment now beyond the Ultimate Gate, the fragment still on the quasi-hexagonal pedestal beyond the First Gate, the boy of 1883, the man of 1928, the

various ancestral beings who had formed his heritage and the bulwark of his ego, amid the nameless denizens of the other eons and other worlds which that first hideous flash of ultimate perception had identified with him. Slowly the waves of the Being surged out in reply, trying to make plain what was almost beyond the reach of an earthly mind.

All descended lines of beings of the finite dimensions, continued the waves, and all stages of growth in each one of these beings, are merely manifestations of one archetypal and eternal being in the space outside dimensions. Each local being—son, father, grandfather, and so on—and each stage of individual being—infant, child, boy, man—is merely one of the infinite phases of that same archetypal and eternal being, caused by a variation in the angle of the consciousness-plane which cuts it. Randolph Carter at all ages; Randolph Carter and all his ancestors, both human and pre-human, terrestrial and pre-terrestrial; all these were only phases of one ultimate, eternal “Carter” outside space and time—phantom projections differentiated only by the angle at which the plane of consciousness happened to cut the eternal archetype in each case.

A slight change of angle could turn the student of today into the child of yesterday; could turn Randolph Carter into that wizard, Edmund Carter who fled from Salem to the hills behind Arkham

in 1692, or that Pickman Carter who in the year 2169 would use strange means in repelling the Mongol hordes from Australia; could turn a human Carter into one of those earlier entities which had dwelt in primal Hyperborea and worshipped black, plastic Tsathoggua after flying down from Kythamil, the double planet that once revolved around Arcturus; could turn a terrestrial Carter to a remotely ancestral and doubtfully shaped dweller on Kythamil itself, or a still remoter creature of trans-galactic Stronti, or a four-dimensioned gaseous consciousness in an older space-time continuum, or a vegetable brain of the future on a dark, radioactive comet of inconceivable orbit—so on, in endless cosmic cycle.

The archetype, throbbed the waves, are the people of the Ultimate Abyss—formless, ineffable, and guessed at only by rare dreamers on the low-dimensioned worlds. Chief among such was this informing Being itself... which indeed was Carter’s own archetype. The zeal of Carter and all his forebears for forbidden cosmic secrets was a natural result of derivation from the Supreme Archetype. On every world all great wizards, all great thinkers, all great artists, are facets of It.

Almost stunned with awe, and with a kind of terrifying delight, Randolph Carter’s consciousness did homage to that transcendent Entity from which it was derived. As the waves paused again he pondered in

the mighty silence, thinking of strange tributes, stranger questions, and still stranger requests. Curious concepts flowed conflictingly through a brain dazed with unaccustomed vistas and unforeseen disclosures. It occurred to him that, if these disclosures were literally true, he might bodily visit all those infinitely distant ages and parts of the universe which he had hitherto known only in dreams, could he but command the magic to change the angle of his consciousness-plane. And did not the silver key supply that magic? Had it not first changed him from a man in 1928 to a boy in 1883, and then to something quite outside time? Oddly, despite his present apparent absence of body; he knew that the key was still with him.

While the silence still lasted, Randolph Carter radiated forth the thoughts and questions which assailed him. He knew that in this ultimate abyss he was equidistant from every facet of his archetype—human or non-human, terrestrial or extra-terrestrial, galactic or trans-galactic; and his curiosity regarding the other phases of his being—especially those phases which were farthest from an earthly 1928 in time and space, or which had most persistently haunted his dreams throughout life—was at fever heat. He felt that his archetypal Entity could at will send him bodily to any of these phases of bygone and distant life by changing his consciousness-plane

and despite the marvels he had undergone he burned for the further marvel of walking in the flesh through those grotesque and incredible scenes which visions of the night had fragmentarily brought him.

Without definite intention he was asking the Presence for access to a dim, fantastic world whose five multi-coloured suns, alien constellations, dizzily black crags, clawed, tapir-snouted denizens, bizarre metal towers, unexplained tunnels, and cryptical floating cylinders had intruded again and again upon his slumbers. That world, he felt vaguely, was in all the conceivable cosmos the one most freely in touch with others; and he longed to explore the vistas whose beginnings he had glimpsed, and to embark through space to those still remoter worlds with which the clawed, snouted denizens trafficked. There was no time for fear. As at all crises of his strange life, sheer cosmic curiosity triumphed over everything else.

When the waves resumed their awesome pulsing, Carter knew that his terrible request was granted. The Being was telling him of the nighted gulfs through which he would have to pass, of the unknown quintuple star in an unsuspected galaxy around which the alien world revolved, and of the burrowing inner horrors against which the clawed, snouted race of that world perpetually fought. It told him, too, of how the angle of his personal consciousness-plane, and the angle of his

consciousness-plane regarding the space-time elements of the sought-for world, would have to be tilted simultaneously in order to restore to that world the Carter-facet which had dwelt there.

The Presence wanted him to be sure of his symbols if he wished ever to return from the remote and alien world he had chosen, and he radiated back an impatient affirmation; confident that the silver key, which he felt was with him and which he knew had tilted both world and personal planes in throwing him back to 1883, contained those symbols which were meant. And now the Being, grasping his impatience, signified its readiness to accomplish the monstrous precipitation. The waves abruptly ceased, and there supervened a momentary stillness tense with nameless and dreadful expectancy.

Then, without warning, came a whirring and drumming that swelled to a terrific thundering. Once again Carter felt himself the focal point of an intense concentration of energy which smote and hammered and seared unbearably in the now-familiar rhythm of outer space, and which he could not classify as either the blasting heat of a blazing star, or the all-petrifying cold of the ultimate abyss. Bands and rays of colour utterly foreign to any spectrum of our universe played and wove and interlaced before him, and he was conscious of a frightful velocity of motion. He caught one fleeting glimpse of a figure sitting alone upon

a cloudy throne more hexagonal than otherwise....

VI.

As the Hindoo paused in his story he saw that de Marigny and Phillips were watching him absorbedly. Aspinwall pretended to ignore the narrative and kept his eyes ostentatiously on the papers before him. The alien-rhythmed ticking of the coffin-shaped clock took on a new and portentous meaning, while the fumes from the choked, neglected tripods wove themselves into fantastic and inexplicable shapes, and formed disturbing combinations with the grotesque figures of the draft-swayed tapestries. The old Negro who had tended them was gone—perhaps some growing tension had frightened him out of the house. An almost apologetic hesitancy hampered the speaker as he resumed in his oddly labored yet idiomatic voice.

“You have found these things of the abyss hard to believe,” he said, “but you will find the tangible and material things ahead still harder. That is the way of our minds. Marvels are doubly incredible when brought into three dimensions from the vague regions of possible dream. I shall not try to tell you much—that would be another and very different story. I will tell only what you absolutely have to know.”

Carter, after that final vortex of alien and polychromatic rhythm, had found himself in what for a moment he thought was his old insistent dream. He was, as many a night before, walking amidst throngs of clawed, snouted beings through the streets of a labyrinth of inexplicably fashioned metal under a palate of diverse solar colour; and as he looked down he saw that his body was like those of the others—rugose, partly squamous, and curiously articulated in a fashion mainly insect-like yet not without a caricaturish resemblance to the human outline. The silver key was still in his grasp, though held by a noxious-looking claw.

In another moment the dream-sense vanished, and he felt rather as one just awakened from a dream. The ultimate abyss—the Being—the entity of an absurd, outlandish race called Randolph Carter on a world of the future not yet born—some of these things were parts of the persistent recurrent dreams of the wizard Zkauba on the planet Yaddith. They were too persistent—they interfered with his duties in weaving spells to keep the frightful Dholes in their burrows, and became mixed up with his recollections of the myriad real worlds he had visited in light-beam envelopes. And now they had become quasi-real as never before. This heavy, material silver key in his right upper claw, exact image of one he had dreamt about

meant no good. He must rest and reflect, and consult the tablets of Nhing for advice on what to do. Climbing a metal wall in a lane off the main concourse, he entered his apartment and approached the rack of tablets.

Seven day-fractions later Zkauba squatted on his prism in awe and half despair, for the truth had opened up a new and conflicting set of memories. Nevermore could he know the peace of being one entity. For all time and space he was two: Zkauba the wizard of Yaddith, disgusted with the thought of the repellent earth-mammal Carter that he was to be and had been, and Randolph Carter, of Boston on the Earth, shivering with fright at the clawed, mantel thing which he had once been, and had become again.

The time units spent on Yaddith, croaked the Swami—whose laboured voice was beginning to show signs of fatigue—made a tale in themselves which could not be related in brief compass. There were trips to Stronti and Mthura and Kath, and other worlds in the twenty-eight galaxies accessible to the light-beam envelopes of the creatures of Yaddith, and trips back and forth through eons of time with the aid of the silver key and various other symbols known to Yaddith's wizards. There were hideous struggles with the bleached viscous Dholes in the primal tunnels that honeycombed the planet. There were awed sessions in libraries amongst the massed lore

of ten thousand worlds living and dead. There were tense conferences with other minds of Yaddith, including that of the Arch-Ancient Buu. Zkauba told no one of what had befallen his personality, but when the Randolph Carter facet was uppermost he would study furiously every possible means of returning to the Earth and to human form, and would desperately practice human speech with the alien throat-organs so ill adapted to it.

The Carter-facet had soon learned with horror that the silver key was unable to effect his return to human form. It was, as he deduced too late from things he remembered, things he dreamed, and things he inferred from the lore of Yaddith, a product of Hyperborea on Earth; with power over the personal consciousness-angles of human beings alone. It could, however, change the planetary angle and send the user at will through time in an unchanged body. There had been an added spell which gave it limitless powers it otherwise lacked; but this, too, was a human discovery—peculiar to a spatially unreachable region, and not to be duplicated by the wizards of Yaddith. It had been written on the undecipherable parchment in the hideously carved box with the silver key, and Carter bitterly lamented that he had left it behind. The now inaccessible Being of the abyss had warned him to be sure of his symbols, and had doubtless thought he lacked nothing.

As time wore on he strove harder and harder to utilize the monstrous lore of Yaddith in finding a way back to the abyss and the omnipotent Entity. With his new knowledge he could have done much toward reading the cryptic parchment; but that power, under present conditions, was merely ironic. There were times, however, when the Zkauba-facet was uppermost and when he strove to erase the conflicting Carter-memories which troubled him.

Thus long spaces of time wore on—ages longer than the brain of man could grasp, since the beings of Yaddith die only after prolonged cycles. After many hundreds of revolutions the Carter-facet seemed to gain on the Zkauba-facet, and would spend vast periods calculating the distance of Yaddith in space and time from the human Earth that was to be. The figures were staggering eons of light-years beyond counting but the immemorial lore of Yaddith fitted Carter to grasp such things. He cultivated the power of dreaming himself momentarily Earthward, and learned many things about our planet that he had never known before. But he could not dream the needed formula on the missing parchment.

Then at last he conceived a wild plan of escape from Yaddith—which began when he found a drug that would keep his Zkauba-facet always dormant, yet without dissolution of the knowledge and memories of Zkauba. He thought that his

calculations would let him perform a voyage with a light-wave envelope such as no being of Yaddith had ever performed—a bodily voyage through nameless eons and across incredible galactic reaches to the solar system and the Earth itself.

Once on Earth, though in the body of a clawed, snouted thing, he might be able somehow to find and finish deciphering, the strangely hieroglyphed parchment he had left in the car at Arkham; and with its aid—and the key's—resume his normal terrestrial semblance.

He was not blind to the perils of the attempt. He knew that when he had brought the planet-angle to the right eon (a thing impossible to do while hurtling through space), Yaddith would be a dead world dominated by triumphant Dholes, and that his escape in the light-wave envelope would be a matter of grave doubt. Likewise was he aware of how he must achieve suspended animation, in the manner of an adept, to endure the eon long flight through fathomless abysses. He knew, too, that—assuming his voyage succeeded—he must immunize himself to the bacterial and other earthly conditions hostile to a body from Yaddith. Furthermore, he must provide a way of feigning human shape on Earth until he might recover and decipher the parchment and resume that shape in truth. Otherwise he would probably be discovered and destroyed by the people in horror as a thing that

should not be. And there must be some gold—luckily obtainable on Yaddith—to tide him over that period of quest.

Slowly Carter's plans went forward. He prepared a light-wave envelope of abnormal toughness, able to stand both the prodigious time-transition and the unexampled flight through space. He tested all his calculations, and sent forth his Earthward dreams again and again, bringing them as close as possible to 1928. He practiced suspended animation with marvelous success. He discovered just the bacterial agent he needed, and worked out the varying gravity-stresses to which he must become used. He artfully fashioned a waxen mask and loose costume enabling him to pass among men as a human being of a sort, and devised a doubly potent spell with which to hold back the Dholes at the moment of his starting from the dead, black Yaddith of the inconceivable future. He took care, too, to assemble a large supply of the drugs—unobtainable on Earth—which would keep his Zkauba-facet in abeyance till he might shed the Yaddith body, nor did he neglect a small store of gold for earthly use.

The starting-day was a time of doubt and apprehension. Carter climbed up to his envelope-platform, on the pretext of sailing for the triple star Nython, and crawled into the sheath of shining metal. He had just room to perform the ritual of the silver key, and as he did so he slowly

started the levitation of his envelope. There was an appalling seething and darkening of the day, and hideous racking of pain. The cosmos seemed to reel irresponsibly, and the other constellations danced in a black sky.

All at once Carter felt a new equilibrium. The cold of interstellar gulfs gnawed at the outside of his envelope, and he could see that he floated free in space—the metal building from which he had started having decayed years before. Below him the ground was festering with gigantic Dholes; and even as he looked, one reared up several hundred feet and leveled a bleached, viscous end at him. But his spells were effective, and in another moment he was falling away from Yaddith, unharmed.

VII.

In that bizarre room in New Orleans, from which the old black servant had instinctively fled, the odd voice of Swami Chandraputta grew hoarser still.

“Gentlemen,” he continued, “I will not ask you to believe these things until I have shown you special proof. Accept it, then, as a myth, when I tell you of the thousands of light-years—thousands of years of time, and uncounted billions of miles that Randolph Carter hurtled through space as a nameless, alien entity in a thin envelope of electron-activated metal. He timed his period of suspended animation with

utmost care, planning to have it end only a few years before the time of landing on the Earth in or near 1928.

“He will never forget that awakening. Remember, gentlemen, that before that eon long sleep he had lived consciously for thousands of terrestrial years amidst the alien and horrible wonders of Yaddith. There was a hideous gnawing of cold, a cessation of menacing dreams, and a glance through the eye-plates of the envelope. Stars, clusters, nebulae, on every hand—and at last their outline bore some kinship to the constellations of Earth that he knew.

“Some day his descent into the solar system may be told. He saw Kynath and Yuggoth on the rim, passed close to Neptune and glimpsed the hellish white fungi that spot it, learned an untellable secret from the close glimpsed mists of Jupiter, and saw the horror on one of the satellites, and gazed at the cyclopean ruins that sprawl over Mars’ ruddy disc. When the Earth drew near he saw it as a thin crescent which swelled alarmingly in size. He slackened speed, though his sensations of homecoming made him wish to lose not a moment. I will not try to tell you of these sensations as I learned them from Carter.

“Well, toward the last Carter hovered about in the Earth’s upper air waiting till daylight came over the Western Hemisphere. He wanted to land where he had left—near the Snake Den in the hills behind Arkham. If any of you have been

away from home long—and I know one of you has—I leave it to you how the sight of New England’s rolling hills and great elms and gnarled orchards and ancient stone walls must have affected him.

“He came down at dawn in the lower meadow of the old Carter place, and was thankful for the silence and solitude. It was autumn, as when he had left, and the smell of the hills was balm to his soul. He managed to drag the metal envelope up the slope of the timber lot into the Snake Den, though it would not go through the weed-choked fissure to the inner cave. It was there also that he covered his alien body with the human clothing and waxen mask which would be necessary. He kept the envelope here for over a year, till certain circumstances made a new hiding-place necessary.

“He walked to Arkham—incidentally practicing the management of his body in human posture and against terrestrial gravity—and had his gold changed to money at a bank. He also made some inquiries—posing as a foreigner ignorant of much English—and found that the year was 1930, only two years after the goal he had aimed at.

“Of course, his position was horrible. Unable to assert his identity, forced to live on guard every moment, with certain difficulties regarding food, and with a need to conserve the alien drug which kept his Zkauba-facet dormant, he felt that he must act as quickly as possible.

Going to Boston and taking a room in the decaying West End, where he could live cheaply and inconspicuously, he at once established inquiries concerning Randolph Carter’s estate and effects. It was then that he learned how anxious Mr. Aspinwall, here, was to have the estate divided, and how valiantly Mr. de Marigny and Mr. Phillips strove to keep it intact.”

The Hindoo bowed, though no expression crossed his dark, tranquil, and thickly bearded face.

“Indirectly,” he continued, “Carter secured a good copy of the missing parchment and began working on its deciphering. I am glad to say that I was able to help in all this—for he appealed to me quite early, and through me came in touch with other mystics throughout the world. I went to live with him in Boston—a wretched place in Chambers Street. As for the parchment—I am pleased to help Mr. de Marigny in his perplexity. To him let me say that the language of those hieroglyphics is not Naacal, but R’lyehian, which was brought to Earth by the spawn of Cthulhu countless ages ago. It is, of course, a translation—there was a Hyperborean original millions of years earlier in the primal tongue of Tsath-yo.

“There was more to decipher than Carter had looked for, but at no time did he give up hope. Early this year he made great strides through a book he imported from

Nepal, and there is no question but that he will win before long. Unfortunately, however, one handicap has developed—the exhaustion of the alien drug which keeps the Zkauba-facet dormant. This is not, however, as great a calamity as was feared. Carter's personality is gaining in the body, and when Zkauba comes upper most—for shorter and shorter periods, and now only when evoked by some unusual excitement—he is generally too dazed to undo any of Carter's work. He can not find the metal envelope that would take him back to Yaddith, for although he almost did, once, Carter hid it anew at a time when the Zkanba-facet was wholly latent. All the harm he has done is to frighten a few people and create certain nightmare rumors among the Poles and Lithuanians of Boston's West End. So far, he had never injured the careful disguise prepared by the Carter-facet, though he sometimes throws it off so that parts have to be replaced. I have seen what lies beneath—and it is not good to see.

"A month ago Carter saw the advertisement of this meeting, and knew that he must act quickly to save his estate. He could not wait to decipher the parchment and resume his human form. Consequently he deputed me to act for him.

"Gentlemen, I say to you that Randolph Carter is not dead; that he is temporarily in an anomalous condition, but that within two or three months at the outside he will

be able to appear in proper form and demand the custody of his estate. I am prepared to offer proof if necessary. Therefore I beg that you will adjourn this meeting for an indefinite period."

VIII.

De Marigny and Phillips stared at the Hindoo as if hypnotized, while Aspinwall emitted a series of snorts and bellows. The old attorney's disgust had by now surged into open rage and he pounded the table with an apoplectically veined fist. When he spoke, it was in a kind of bark.

"How long is this foolery to be borne? I've listened an hour to this madman—this faker—and now he has the damned effrontery to say Randolph Carter is alive—to ask us to postpone the settlement for no good reason! Why don't you throw the scoundrel out, de Marigny? Do you mean to make us all the butts of a charlatan or idiot?"

De Marigny quietly raised his hand and spoke softly.

"Let us think slowly and dearly. This has been a very singular tale, and there are things in it which I, as a mystic not altogether ignorant, recognize as far from impossible. Furthermore—since 1930 I have received letters from the Swami which tally with his account."

As he paused, old Mr. Phillips ventured a word.

"Swami Chandraputra spoke of proofs. I, too, recognize much that is significant in this story, and I have myself had many oddly corroborative letters from the Swami during the last two years; but some of these statements are very extreme. Is there not something tangible which can be shown?"

At last the impassive-faced Swami replied, slowly and hoarsely, and drawing an object from the pocket of his loose coat as he spoke.

"While none of you here has ever seen the silver key itself, Messrs. de Marigny and Phillips have seen photographs of it. Does this look familiar to you?"

He fumblingly laid on the table, with his large, white-mittened hand, a heavy key of tarnished silver—nearly five inches long, of unknown and utterly exotic workmanship, and covered from end to end with hieroglyphs of the most bizarre description. De Marigny and Phillips gasped.

"That's it!" cried de Marigny. "The camera doesn't lie. I couldn't be mistaken!"

But Aspinwall had already launched a reply.

"Fools! What does it prove? If that's really the key that belonged to my cousin, it's up to this foreigner—this damned nigger—to explain how he got it! Randolph Carter vanished with the key four years ago. How do we know he wasn't robbed and murdered? He was half crazy himself, and in touch with still crazier people.

"Look here, you nigger—where did you get that key? Did you kill Randolph Carter?"

The Swami's features, abnormally placid, did not change; but the remote, irisless black eyes behind them blazed dangerously. He spoke with great difficulty.

"Please control yourself, Mr. Aspinwall. There is another form of poof that I could give, but its effect upon everybody would not be pleasant. Let us be reasonable. Here are some papers obviously written since 1930, and in the unmistakable style of Randolph Carter."

He clumsily drew a long envelope from inside his loose coat and handed it to the sputtering attorney as de Marigny and Phillips watched with chaotic thoughts and a dawning feeling of supernal wonder.

"Of course the handwriting is almost illegible—but remember that Randolph Carter now has no hands well adapted to forming human script."

Aspinwall looked through the papers hurriedly, and was visibly perplexed, but he did not change his demeanor. The room was tense with excitement and nameless dread and the alien rhythm of the coffin-shaped clock had an utterly diabolic sound to de Marigny and Phillips, though the lawyer seemed affected not at all.

Aspinwall spoke again. "These look like clever forgeries. If they aren't, they may mean that Randolph Carter has been brought under the

control of people with no good purpose. There's only one thing to do—have this faker arrested. De Marigny, will you telephone for the police?"

"Let us wait," answered their host. "I do not think this case calls for the police. I have a certain idea. Mr. Aspinwall, this gentleman is a mystic of real attainments. He says he is in the confidence of Randolph Carter. Will it satisfy you if he can answer certain questions which could be answered only by one in such confidence? I know Carter, and can ask such questions. Let me get a book which I think will make a good test."

He turned toward the door to the library, Phillips dazedly following in a kind of automatic way. Aspinwall remained where he was, studying closely the Hindoo who confronted him with abnormally impassive face. Suddenly, as Chandraputra clumsily restored the silver key to his pocket the lawyer emitted a guttural shout.

"Hey, by Heaven I've got it! This rascal is in disguise. I don't believe he's an East Indian at all. That face—it isn't a face, but a mask! I guess his story put that into my head, but it's true. It never moves, and that turban and beard hide the edges. This fellow's a common crook! He isn't even a foreigner—I've been watching his language. He's a Yankee of some sort. And look at those mittens—he knows his fingerprints could be spotted. Damn you, I'll pull that thing off—"

"Stop!" The hoarse, oddly alien

voice of the Swami held a tone beyond all mere earthly fright. "I told you there was another form of proof which I could give if necessary, and I warned you not to provoke me to it. This red-faced old meddler is right; I'm not really an East Indian. This face is a mask, and what it covers is not human. You others have guessed—I felt that minutes ago. It wouldn't be pleasant if I took that mask off—let it alone. Ernest, I may as well tell you that I am Randolph Carter."

No one moved. Aspinwall snorted and made vague motions. De Marigny and Phillips, across the room, watched the workings of the red face and studied the back of the turbaned figure that confronted him. The clock's abnormal ticking was hideous and the tripod fumes and swaying arras danced a dance of death. The half-choking lawyer broke the silence.

"No you don't, you crook—you can't scare me! You've reasons of your own for not wanting that mask off. Maybe we'd know who you are. Off with it—"

As he reached forward, the Swami seized his hand with one of his own clumsily mittened members, evoking a curious cry of mixed pain and surprise. De Marigny started toward the two, but paused confused as the pseudo-Hindoo's shout of protest changed to a wholly inexplicable rattling and buzzing sound. Aspinwall's red face was furious, and with his free hand he made another

lunge at his opponent's bushy beard. This time he succeeded in getting a hold, and at his frantic tug the whole waxen visage came loose from the turban and clung to the lawyer's apoplectic fist.

As it did so, Aspinwall uttered a frightful gurgling cry, and Phillips and de Maigny saw his face convulsed with a wilder, deep and more hideous epilepsy of stark panic than ever they had seen on human countenance before. The pseudo-Swami had meanwhile released his other hand and was standing as if dazed, making buzzing noises of a most abnormal quality. Then the turbaned figure slumped oddly into a posture scarcely human, and began a curious, fascinated sort of shuffle toward the coffin-shaped clock that ticked out its cosmic and abnormal rhythm. His now uncovered face was turned away, and de Marigny and Phillips could not see what the lawyer's act had disclosed. Then their attention was turned to Aspinwall, who was sinking ponderously to the floor. The spell was broken—but when they reached the old man he was dead.

Turning quickly to the shuffling Swami's receding back, de Marigny saw one of the great white mittens drop listlessly off a dangling arm. The fumes of the olibanum were thick, and all that could be glimpsed of the revealed hand was something long and black.... Before the Creole could reach the retreating figure, old Mr. Phillips laid a hand on his shoulder.

"Don't!" he whispered, "We don't know what we're up against. That other facet, you know—Zkauba, the wizard of Yaddith..."

The turbaned figure had now reached the abnormal clock, and the watchers saw though the dense fumes a blurred black claw fumbling with the tall, hieroglyphed door. The fumbling made a queer, clicking sound. Then the figure entered the coffin-shaped case and pulled the door shut after it.

De Marigny could no longer be restrained, but when he reached and opened the clock it was empty. The abnormal ticking went on, beating out the dark, cosmic rhythm which underlies all mystical gate-openings. On the floor the great white mitten, and the dead man with a bearded mask clutched in his hand, had nothing further to reveal.

A year passed, and nothing has been heard of Randolph Carter. His estate is still unsettled. The Boston address from which one "Swami Chandraputra" sent inquiries to various mystics in 1930-31-32 was indeed tenanted by a strange Hindoo, but he left shortly before the date of the New Orleans conference and has never been seen since. He was said to be dark, expressionless, and bearded, and his landlord thinks the swarthy mask—which was duly exhibited—looked very much like him. He was never, however, suspected

of any connection with the nightmare apparitions whispered of by local Slavs. The hills behind Arkham were searched for the “metal envelope,” but nothing of the sort was ever found. However, a clerk in Arkham’s First National Bank does recall a queer turbaned man who cashed an odd bit of gold bullion in October, 1930.

De Marigny and Phillips scarcely know what to make of the business. After all, what was proved?

There was a story. There was a key which might have been forged from one of the pictures Carter had freely distributed in 1928. There were papers—all indecisive. There was a masked stranger, but who now living saw behind the mask? Amidst the strain and the olibanum fumes that act of vanishing in the clock might easily have been a dual hallucination. Hindoos know much of hypnotism. Reason proclaims the “Swami” a criminal with designs on Randolph Carter’s estate. But the autopsy said that Aspinwall had died of shock. Was it rage alone which caused it? And some things in that story...

In a vast room hung with strangely figured arras and filled with olibanum fumes, Étienne Laurent de Marigny often sits listening with vague sensations to the abnormal rhythm of that hieroglyphed, coffin-shaped clock.

The **THING on the DOORSTEP.**

[RETURN TO TABLE OF CONTENTS]

I.

It is true that I have sent six bullets through the head of my best friend, and yet I hope to show by this statement that I am not his murderer. At first I shall be called a madman—madder than the man I shot in his cell at the Arkham Sanitarium. Later some of my readers will weigh each statement, correlate it with the known facts, and ask themselves how I could have believed otherwise than I did after facing the evidence of that horror—that thing on the doorstep.

Until then I also saw nothing but madness in the wild tales I have acted on. Even now I ask myself whether I was misled—or whether

I am not mad after all. I do not know—but others have strange things to tell of Edward and Asenath Derby, and even the stolid police are at their wits’ ends to account for that last terrible visit. They have tried weakly to concoct a theory of a ghastly jest or warning by discharged servants, yet they know in their hearts that the truth is something infinitely more terrible and incredible.

So I say that I have not murdered Edward Derby. Rather have I avenged him, and in so doing purged the earth of a horror whose survival might have loosed untold terrors on all mankind. There are black zones of shadow close to our daily paths, and now and then some evil soul breaks a passage through. When that

happens, the man who knows must strike before reckoning the consequences.

I have known Edward Pickman Derby all his life. Eight years my junior, he was so precocious that we had much in common from the time he was eight and I was sixteen. He was the most phenomenal child scholar I have ever known, and at seven was writing verse of a sombre, fantastic, almost morbid cast which astonished the tutors surrounding him. Perhaps his private education and coddled seclusion had something to do with his premature flowering. An only child, he had organic weaknesses which startled his doting parents and caused them to keep him closely chained to their side. He was never allowed out without his nurse, and seldom had a chance to play unconstrainedly with other children. All this doubtless fostered a strange secretive life in the boy, with imagination as his one avenue of freedom.

At any rate, his juvenile learning was prodigious and bizarre; and his facile writings such as to captivate me despite my greater age. About that time I had leanings toward art of a somewhat grotesque cast, and I found in this younger child a rare kindred spirit. What lay behind our joint love of shadows and marvels was, no doubt, the ancient, mouldering, and subtly fearsome town in which we live—witch-cursed, legend-haunted Arkham, whose huddled, sagging gambrel roofs and

crumbling Georgian balustrades brood out the centuries beside the darkly muttering Miskatonic.

As time went by I turned to architecture and gave up my design of illustrating a book of Edward's demoniac poems, yet our comradeship suffered no lessening. Young Derby's odd genius developed remarkably, and in his eighteenth year his collected nightmare-lyrics made a real sensation when issued under the title *Azathoth and Other Horrors*. He was a close correspondent of the notorious Baudelairean poet Justin Geoffrey, who wrote *The People of the Monolith* and died screaming in a madhouse in 1926 after a visit to a sinister, ill-regarded village in Hungary.

In self-reliance and practical affairs, however, Derby was greatly retarded because of his coddled existence. His health had improved, but his habits of childish dependence were fostered by over-careful parents, so that he never travelled alone, made independent decisions, or assumed responsibilities. It was early seen that he would not be equal to a struggle in the business or professional arena, but the family fortune was so ample that this formed no tragedy. As he grew to years of manhood he retained a deceptive aspect of boyishness. Blond and blue-eyed, he had the fresh complexion of a child; and his attempt to raise a moustache were discernible only with difficulty. His voice was soft and light, and his unexercised life gave him a juvenile

chubbiness rather than the paunchiness of premature middle age. He was of good height, and his handsome face would have made him a notable gallant had not his shyness held him to seclusion and bookishness.

Derby's parents took him abroad every summer, and he was quick to seize on the surface aspects of European thought and expression. His Poe-like talents turned more and more toward the decadent, and other artistic sensitiveness and yearnings were half-aroused in him. We had great discussions in those days. I had been through Harvard, had studied in a Boston architect's office, had married, and had finally returned to Arkham to practise my profession—settling in the family homestead in Saltonstall Street since my father had moved to Florida for his health. Edward used to call almost every evening, till I came to regard him as one of the household. He had a characteristic way of ringing the doorbell or sounding the knocker that grew to be a veritable code signal, so that after dinner I always listened for the familiar three brisk strokes followed by two more after a pause. Less frequently I would visit at his house and note with envy the obscure volumes in his constantly growing library.

Derby went through Miskatonic University in Arkham since his parents would not let him board away from them. He entered at sixteen and completed his course in

three years, majoring in English and French literature and receiving high marks in everything but mathematics and the sciences. He mingled very little with the other students, though looking enviously at the "daring" or "Bohemian" set—whose superficially "smart" language and meaningless ironic pose he aped, and whose dubious conduct he wished he dared adopt.

What he did do was to become an almost fanatical devotee of subterranean magical lore, for which Miskatonic's library was and is famous. Always a dweller on the surface of phantasy and strangeness, he now delved deep into the actual runes and riddles left by a fabulous past for the guidance or puzzlement of posterity. He read things like the frightful *Book of Eibon*, the *Unaussprechlichen Kulten* of von Junzt, and the forbidden *Necronomicon* of the mad Arab Abdul Alhazred, though he did not tell his parents he had seen them. Edward was twenty when my son and only child was born, and seemed pleased when I named the newcomer Edward Derby Upton after him.

By the time he was twenty-five Edward Derby was a prodigiously learned man and a fairly well known poet and fantasiste though his lack of contacts and responsibilities had slowed down his literary growth by making his products derivative and over-bookish. I was perhaps his closest friend—finding him an inexhaustible mine of vital theoretical

topics, while he relied on me for advice in whatever matters he did not wish to refer to his parents. He remained single—more through shyness, inertia, and parental protectiveness than through inclination—and moved in society only to the slightest and most perfunctory extent. When the war came both health and ingrained timidity kept him at home. I went to Plattsburg for a commission but never got overseas.

So the years wore on. Edward's mother died when he was thirty four and for months he was incapacitated by some odd psychological malady. His father took him to Europe, however, and he managed to pull out of his trouble without visible effects. Afterward he seemed to feel a sort of grotesque exhilaration, as if of partial escape from some unseen bondage. He began to mingle in the more "advanced" college set despite his middle age, and was present at some extremely wild doings—on one occasion paying heavy blackmail (which he borrowed of me) to keep his presence at a certain affair from his father's notice. Some of the whispered rumors about the wild Miskatonic set were extremely singular. There was even talk of black magic and of happenings utterly beyond credibility.

II.

Edward was thirty-eight when he met Asenath Waite. She was, I judge, about twenty-three at the time; and was taking a special course in mediaeval metaphysics at Miskatonic. The daughter of a friend of mine had met her before—in the Hall School at Kingsport—and had been inclined to shun her because of her odd reputation. She was dark, smallish, and very good-looking except for overprotuberant eyes; but something in her expression alienated extremely sensitive people. It was, however, largely her origin and conversation which caused average folk to avoid her. She was one of the Innsmouth Waites, and dark legends have clustered for generations about crumbling, half-deserted Innsmouth and its people. There are tales of horrible bargains about the year 1850, and of a strange element "not quite human" in the ancient families of the run-down fishing port—tales such as only old-time Yankees can devise and repeat with proper awesomeness.

Asenath's case was aggravated by the fact that she was Ephraim Waite's daughter—the child of his old age by an unknown wife who always went veiled. Ephraim lived in a half-decayed mansion in Washington Street, Innsmouth, and those who had seen the place

(Arkham folk avoid going to Innsmouth whenever they can) declared that the attic windows were always boarded, and that strange sounds sometimes floated from within as evening drew on. The old man was known to have been a prodigious magical student in his day, and legend averred that he could raise or quell storms at sea according to his whim. I had seen him once or twice in my youth as he came to Arkham to consult forbidden tomes at the college library, and had hated his wolfish, saturnine face with its tangle of iron-grey beard. He had died insane—under rather queer circumstances—just before his daughter (by his will made a nominal ward of the principal) entered the Hall School, but she had been his morbidly avid pupil and looked fiendishly like him at times.

The friend whose daughter had gone to school with Asenath Waite repeated many curious things when the news of Edward's acquaintance with her began to spread about. Asenath, it seemed, had posed as a kind of magician at school; and had really seemed able to accomplish some highly baffling marvels. She professed to be able to raise thunderstorms, though her seeming success was generally laid to some uncanny knack at prediction. All animals markedly disliked her, and she could make any dog howl by certain motions of her right hand. There were times when she displayed snatches of knowledge and language

very singular—and very shocking—for a young girl; when she would frighten her schoolmates with leers and winks of an inexplicable kind, and would seem to extract an obscene zestful irony from her present situation.

Most unusual, though, were the well-attested cases of her influence over other persons. She was, beyond question, a genuine hypnotist. By gazing peculiarly at a fellow-student she would often give the latter a distinct feeling of exchanged personality—as if the subject were placed momentarily in the magician's body and able to stare half across the room at her real body, whose eyes blazed and protruded with an alien expression. Asenath often made wild claims about the nature of consciousness and about its independence of the physical frame—or at least from the life-processes of the physical frame. Her crowning rage, however, was that she was not a man; since she believed a male brain had certain unique and far-reaching cosmic powers. Given a man's brain, she declared, she could not only equal but surpass her father in mastery of unknown forces.

Edward met Asenath at a gathering of "intelligentsia" held in one of the students' rooms, and could talk of nothing else when he came to see me the next day. He had found her full of the interests and erudition which engrossed him most, and was in addition wildly taken with her appearance. I had never seen the

young woman, and recalled casual references only faintly, but I knew who she was. It seemed rather regrettable that Derby should become so upheaved about her; but I said nothing to discourage him, since infatuation thrives on opposition. He was not, he said, mentioning her to his father.

In the next few weeks I heard of very little but Asenath from young Derby. Others now remarked Edward's autumnal gallantry, though they agreed that he did not look even nearly his actual age, or seem at all inappropriate as an escort for his bizarre divinity. He was only a trifle paunchy despite his indolence and self-indulgence, and his face was absolutely without lines. Asenath, on the other hand, had the premature crow's feet which come from the exercises of an intense will.

About this time Edward brought the girl to call on me, and I at once saw that his interest was by no means one-sided. She eyed him continually with an almost predatory air, and I perceived that their intimacy was beyond untangling. Soon afterward I had a visit from old Mr. Derby, whom I had always admired and respected. He had heard the tales of his son's new friendship, and had wormed the whole truth out of "the boy." Edward meant to marry Asenath, and had even been looking at houses in the suburbs. Knowing my usually great influence with his son, the father wondered if I could help to break the ill-advised affair

off; but I regretfully expressed my doubts. This time it was not a question of Edward's weak will but of the woman's strong will. The perennial child had transferred his dependence from the parental image to a new and stronger image, and nothing could be done about it.

The wedding was performed a month later—by a justice of the peace, according to the bride's request. Mr. Derby, at my advice, offered no opposition, and he, my wife, my son, and I attended the brief ceremony—the other guests being wild young people from the college. Asenath had bought the old Crowninshield place in the country at the end of High Street, and they proposed to settle there after a short trip to Innsmouth, whence three servants and some books and household goods were to be brought. It was probably not so much consideration for Edward and his father as a personal wish to be near the college, its library, and its crowd of "sophisticates," that made Asenath settle in Arkham instead of returning permanently home.

When Edward called on me after the honeymoon I thought he looked slightly changed. Asenath had made him get rid of the undeveloped moustache, but there was more than that. He looked soberer and more thoughtful, his habitual pout of childish rebelliousness being exchanged for a look almost of genuine sadness. I was puzzled to decide whether I liked or disliked

the change. Certainly he seemed for the moment more normally adult than ever before. Perhaps the marriage was a good thing—might not the change of dependence form a start toward actual neutralisation, leading ultimately to responsible independence? He came alone, for Asenath was very busy. She had brought a vast store of books and apparatus from Innsmouth (Derby shuddered as he spoke the name), and was finishing the restoration of the Crowninshield house and grounds.

Her home—in that town—was a rather disgusting place, but certain objects in it had taught him some surprising things. He was progressing fast in esoteric lore now that he had Asenath's guidance. Some of the experiments she proposed were very daring and radical—he did not feel at liberty to describe them—but he had confidence in her powers and intentions. The three servants were very queer—an incredibly aged couple who had been with old Ephraim and referred occasionally to him and to Asenath's dead mother in a cryptic way, and a swarthy young wench who had marked anomalies of feature and seemed to exude a perpetual odour of fish.

III.

For the next two years I saw less and less of Derby. A fortnight would sometimes slip by without the familiar

three-and-two strokes at the front door; and when he did call—or when, as happened with increasing infrequency, I called on him—he was very little disposed to converse on vital topics. He had become secretive about those occult studies which he used to describe and discuss so minutely, and preferred not to talk of his wife. She had aged tremendously since her marriage, till now—oddly enough—she seemed the elder of the two. Her face held the most concentratedly determined expression I had ever seen, and her whole aspect seemed to gain a vague, unplaceable repulsiveness. My wife and son noticed it as much as I, and we all ceased gradually to call on her—for which, Edward admitted in one of his boyishly tactless moments, she was unmitigatedly grateful. Occasionally the Derbys would go on long trips—ostensibly to Europe, though Edward sometimes hinted at obscurer destinations.

It was after the first year that people began talking about the change in Edward Derby. It was very casual talk, for the change was purely psychological; but it brought up some interesting points. Now and then, it seemed Edward was observed to wear an expression and to do things wholly incompatible with his usual flabby nature. For example—although in the old days he could not drive a car, he was now seen occasionally to dash into or out of

the old Crowninshield driveway with Asenath's powerful Packard, handling it like a master, and meeting traffic entanglements with a skill and determination utterly alien to his accustomed nature. In such cases he seemed always to be just back from some trip or just starting on one—what sort of trip, no one could guess, although he mostly favoured the Innsmouth road.

Oddly, the metamorphosis did not seem altogether pleasing. People said he looked too much like his wife, or like old Ephraim Waite himself, in these moments—or perhaps these moments seemed unnatural because they were so rare. Sometimes, hours after starting out in this way, he would return listlessly sprawled on the rear seat of the car while an obviously hired chauffeur or mechanic drove. Also, his preponderant aspect on the streets during his decreasing round of social contacts (including, I may say, his calls on me) was the old-time indecisive one—its irresponsible childishness even more marked than in the past. While Asenath's face aged, Edward—aside from those exceptional occasions—actually relaxed into a kind of exaggerated immaturity, save when a trace of the new sadness or understanding would flash across it. It was really very puzzling. Meanwhile the Derbys almost dropped out of the gay college circle—not through their own disgust, we heard, but because something about their present studies shocked even the most

callous of the other decadents.

It was in the third year of the marriage that Edward began to hint openly to me of a certain fear and dissatisfaction. He would let fall remarks about things “going too far,” and would talk darkly about the need of “gaining his identity.” At first I ignored such references, but in time I began to question him guardedly, remembering what my friend's daughter had said about Asenath's hypnotic influence over the other girls at school—the cases where students had thought they were in her body looking across the room at themselves. This questioning seemed to make him at once alarmed and grateful, and once he mumbled something about having a serious talk with me later. About this time old Mr. Derby died, for which I was afterward very thankful. Edward was badly upset, though by no means disorganized. He had seen astonishingly little of his parent since his marriage, for Asenath had concentrated in herself all his vital sense of family linkage. Some called him callous in his loss—especially since those jaunty and confident moods in the car began to increase. He now wished to move back into the old family mansion, but Asenath insisted on staying in the Crowninshield house to which she had become well adjusted.

Not long afterward my wife heard a curious thing from a friend—one of the few who had not dropped the Derbys. She had been out to the

end of High Street to call on the couple, and had seen a car shoot briskly out of the drive with Edward's oddly confident and almost sneering face above the wheel. Ringing the bell, she had been told by the repulsive wench that Asenath was also out; but had chanced to look at the house in leaving. There, at one of Edward's library windows, she had glimpsed a hastily withdrawn face—a face whose expression of pain, defeat, and wistful hopelessness was poignant beyond description. It was—incredibly enough in view of its usual domineering cast—Asenath's; yet the caller had vowed that in that instant the sad, muddled eyes of poor Edward were gazing out from it.

Edward's calls now grew a trifle more frequent, and his hints occasionally became concrete. What he said was not to be believed, even in centuried and legend-haunted Arkham; but he threw out his dark lore with a sincerity and convincingness which made one fear for his sanity. He talked about terrible meetings in lonely places, of cyclopean ruins in the heart of the Maine woods beneath which vast staircases led down to abysses of nighted secrets, of complex angles that led through invisible walls to other regions of space and time, and of hideous exchanges of personality that permitted explorations in remote and forbidden places, on other worlds, and in different space-time continua.

He would now and then back up certain crazy hints by exhibiting objects which utterly nonplussed me—elusively coloured and bafflingly textured objects like nothing ever heard of on earth, whose insane curves and surfaces answered no conceivable purpose, and followed no conceivable geometry. These things, he said, came “from outside”; and his wife knew how to get them. Sometimes—but always in frightened and ambiguous whisper—he would suggest things about old Ephraim Waite, whom he had seen occasionally at the college library in the old days. These adumbrations were never specific, but seemed to revolve around some especially horrible doubt as to whether the old wizard were really dead—in a spiritual as well as corporeal sense.

At times Derby would halt abruptly in his revelations, and I wondered whether Asenath could possibly have divined his speech at a distance and cut him off through some unknown sort of telepathic mesmerism—some power of the kind she had displayed at school. Certainly, she suspected that he told me things, for as the weeks passed she tried to stop his visits with words and glances of a most inexplicable potency. Only with difficulty could he get to see me, for although he would pretend to be going somewhere else, some invisible force would generally clog his motions or make him forget his destination for the time being. His visits usually

came when Asenath was away—"away in her own body," as he once oddly put it. She always found out later—the servants watched his goings and coming—but evidently she thought it inexpedient to do anything drastic.

IV.

Derby had been married more than three years on that August day when I got that telegram from Maine. I had not seen him for two months, but had heard he was away "on business." Asenath was supposed to be with him, though watchful gossip declared there was someone upstairs in the house behind the doubly curtained windows. They had watched the purchases made by the servants. And now the town marshal of Chesuncook had wired of the dragged madman who stumbled out of the woods with delirious ravings and screamed to me for protection. It was Edward—and he had been just able to recall his own name and address.

Chesuncook is close to the wildest, deepest, and least explored forest belt in Maine, and it took a whole day of feverish jolting through fantastic and forbidding scenery to get there in a car. I found Derby in a cell at the town farm, vacillating between frenzy and apathy. He knew me at once, and began pouring out a meaningless, half-incoherent torrent of words in my direction.

"Dan, for God's sake! The pit of the shoggoths! Down the six thousand steps... the abomination of abominations... I never would let her take me, and then I found myself there—Ia! Shub-Niggurath!—The shape rose up from the altar, and there were five hundred that howled—The Hooded Thing bleated 'Kamog! Kamog!'—that was old Ephraim's secret name in the coven—I was there, where she promised she wouldn't take me—A minute before I was locked in the library, and then I was there where she had gone with my body—in the place of utter blasphemy, the unholy pit where the black realm begins and the watcher guards the gate—I saw a shoggoth—it changed shape—I can't stand it—I'll kill her if she ever sends me there again—I'll kill that entity—her, him, it—I'll kill it! I'll kill it with my own hands!"

It took me an hour to quiet him, but he subsided at last. The next day I got him decent clothes in the village, and set out with him for Arkham. His fury of hysteria was spent, and he was inclined to be silent, though he began muttering darkly to himself when the car passed through Augusta—as if the sight of a city aroused unpleasant memories. It was clear that he did not wish to go home; and considering the fantastic delusions he seemed to have about his wife—delusions undoubtedly springing from some actual hypnotic ordeal to which he had been subjected—I

thought it would be better if he did not. I would, I resolved, put him up myself for a time; no matter what unpleasantness it would make with Asenath. Later I would help him get a divorce, for most assuredly there were mental factors which made this marriage suicidal for him. When we struck open country again Derby's muttering faded away, and I let him nod and drowse on the seat beside me as I drove.

During our sunset dash through Portland the muttering commenced again, more distinctly than before, and as I listened I caught a stream of utterly insane drivel about Asenath. The extent to which she had preyed on Edward's nerves was plain, for he had woven a whole set of hallucinations around her. His present predicament, he mumbled furtively, was only one of a long series. She was getting hold of him, and he knew that some day she would never let go. Even now she probably let him go only when she had to, because she couldn't hold on long at a time. She constantly took his body and went to nameless places for nameless rites, leaving him in her body and locking him upstairs—but sometimes she couldn't hold on, and he would find himself suddenly in his own body again in some far-off, horrible, and perhaps unknown place. Sometimes she'd get hold of him again and sometimes she couldn't. Often he was left stranded somewhere as I had found him—time and again he had to find his

way home from frightful distances, getting somebody to drive the car after he found it.

The worst thing was that she was holding on to him longer and longer at a time. She wanted to be a man—to be fully human—that was why she got hold of him. She had sensed the mixture of fine-wrought brain and weak will in him. Some day she would crowd him out and disappear with his body—disappear to become a great magician like her father and leave him marooned in that female shell that wasn't even quite human. Yes, he knew about the Innsmouth blood now. There had been traffick with things from the sea—it was horrible... And old Ephraim—he had known the secret, and when he grew old did a hideous thing to keep alive—he wanted to live forever—Asenath would succeed—one successful demonstration had taken place already.

As Derby muttered on I turned to look at him closely, verifying the impression of change which an earlier scrutiny had given me. Paradoxically, he seemed in better shape than usual—harder, more normally developed, and without the trace of sickly flabbiness caused by his indolent habits. It was as if he had been really active and properly exercised for the first time in his coddled life, and I judged that Asenath's force must have pushed him into unwonted channels of motion and alertness. But just now his mind was in a pitiable state; for

he was mumbling wild extravagances about his wife, about black magic, about old Ephraim, and about some revelation which would convince even me. He repeated names which I recognized from bygone browsings in forbidden volumes, and at times made me shudder with a certain thread of mythological consistency—or convincing coherence—which ran through his maundering. Again and again he would pause, as if to gather courage for some final and terrible disclosure.

“Dan, Dan, don’t you remember him—wild eyes and the unkempt beard that never turned white? He glared at me once, and I never forgot it. Now she glares that way. And I know why! He found it in the *Necronomicon*—the formula. I don’t dare tell you the page yet, but when I do you can read and understand. Then you will know what has engulfed me. On, on, on, on—body to body to body—he means never to die. The life-glow—he knows how to break the link... it can flicker on a while even when the body is dead. I’ll give you hints and maybe you’ll guess. Listen, Dan—do you know why my wife always takes such pains with that silly backhand writing? Have you ever seen a manuscript of old Ephraim’s? Do you want to know why I shivered when I saw some hasty notes Asenath had jotted down?”

“Asenath—is there such a person? Why did they half-think there was poison in old Ephraim’s

stomach? Why do the Gilmans whisper about the way he shrieked—like a frightened child—when he went mad and Asenath locked him up in the padded attic room where—the other—had been? Was it old Ephraim’s soul that was locked in? Who locked in whom? Why had he been looking for months for someone with a fine mind and a weak will?—Why did he curse that his daughter wasn’t a son? Tell me, Daniel Upton—what devilish exchange was perpetrated in the house of horror where that blasphemous monster had his trusting, weak-willed half-human child at his mercy? Didn’t he make it permanent—as she’ll do in the end with me? Tell me why that thing that calls itself Asenath writes differently off guard, so that you can’t tell its script from—“

Then the thing happened. Derby’s voice was rising to a thin treble scream as he raved, when suddenly it was shut off with an almost mechanical click. I thought of those other occasions at my home when his confidences had abruptly ceased—when I had half-fancied that some obscure telepathic wave of Asenath’s mental force was intervening to keep him silent. This, though, was something altogether different—and, I felt, infinitely more horrible. The face beside me was twisted almost unrecognizably for a moment, while through the whole body there passed a shivering motion—as if all the bones, organs, muscles, nerves, and glands were

adjusting themselves to a radically different posture, set of stresses, and general personality.

Just where the supreme horror lay, I could not for my life tell; yet there swept over me such a swamping wave of sickness and repulsion—such a freezing, petrifying sense of utter alienage and abnormality—that my grasp of the wheel grew feeble and uncertain. The figure beside me seemed less like a lifelong friend than like some monstrous intrusion from outer space—some damnable, utterly accursed focus of unknown and malign cosmic forces.

I had faltered only a moment, but before another moment was over my companion had seized the wheel and forced me to change places with him. The dusk was now very thick, and the lights of Portland far behind, so I could not see much of his face. The blaze of his eyes, though, was phenomenal; and I knew that he must now be in that queerly energized state—so unlike his usual self—which so many people had noticed. It seemed odd and incredible that listless Edward Derby—he who could never assert himself, and who had never learned to drive—should be ordering me about and taking the wheel of my own car, yet that was precisely what had happened. He did not speak for some time, and in my inexplicable horror I was glad he did not.

In the lights of Biddeford and Saco I saw his firmly set mouth, and shivered at the blaze of his eyes. The

people were right—he did look damnably like his wife and like old Ephraim when in these moods. I did not wonder that the moods were disliked—there was certainly something unnatural in them, and I felt the sinister element all the more because of the wild ravings I had been hearing. This man, for all my lifelong knowledge of Edward Pickman Derby, was a stranger—an intrusion of some sort from the black abyss.

He did not speak until we were on a dark stretch of road, and when he did his voice seemed utterly unfamiliar. It was deeper, firmer, and more decisive than I had ever known it to be; while its accent and pronunciation were altogether changed—though vaguely, remotely, and rather disturbingly recalling something I could not quite place. There was, I thought, a trace of very profound and very genuine irony in the timbre—not the flashy, meaninglessly jaunty pseudo-irony of the callow “sophisticate,” which Derby had habitually affected, but something grim, basic, pervasive, and potentially evil. I marvelled at the self-possession so soon following the spell of panic-struck muttering.

“I hope you’ll forget my attack back there, Upton,” he was saying. “You know what my nerves are, and I guess you can excuse such things. I’m enormously grateful, of course, for this lift home.

“And you must forget, too, any crazy things I may have been saying

about my wife—and about things in general. That's what comes from overstudy in a field like mine. My philosophy is full of bizarre concepts, and when the mind gets worn out it cooks up all sorts of imaginary concrete applications. I shall take a rest from now on—you probably won't see me for some time, and you needn't blame Asenath for it.

"This trip was a bit queer, but it's really very simple. There are certain Indian relics in the north wood—standing stones, and all that—which mean a good deal in folklore, and Asenath and I are following that stuff up. It was a hard search, so I seem to have gone off my head. I must send somebody for the car when I get home. A month's relaxation will put me on my feet."

I do not recall just what my own part of the conversation was, for the baffling alienage of my seatmate filled all my consciousness. With every moment my feeling of elusive cosmic horror increased, till at length I was in a virtual delirium of longing for the end of the drive. Derby did not offer to relinquish the wheel, and I was glad of the speed with which Portsmouth and Newburyport flashed by.

At the junction where the main highway runs inland and avoids Innsmouth, I was half-afraid my driver would take the bleak shore road that goes through that damnable place. He did not, however, but darted rapidly past Rowley and Ipswich toward our destination. We

reached Arkham before midnight, and found the lights still on at the old Crowninshield house. Derby left the car with a hasty repetition of his thanks, and I drove home alone with a curious feeling of relief. It had been a terrible drive—all the more terrible because I could not quite tell why—and I did not regret Derby's forecast of a long absence from my company.

The next two months were full of rumours. People spoke of seeing Derby more and more in his new energized state, and Asenath was scarcely ever in to her callers. I had only one visit from Edward, when he called briefly in Asenath's car—duly reclaimed from wherever he had left it in Maine—to get some books he had lent me. He was in his new state, and paused only long enough for some evasively polite remarks. It was plain that he had nothing to discuss with me when in this condition—and I noticed that he did not even trouble to give the old three-and-two signal when ringing the doorbell. As on that evening in the car, I felt a faint, infinitely deep horror which I could not explain; so that his swift departure was a prodigious relief.

In mid-September Derby was away for a week, and some of the decadent college set talked knowingly of the matter—hinting at a meeting with a notorious cult-leader, lately expelled from England, who had established headquarters in New York. For my part I could not get that strange ride from Maine out of

my head. The transformation I had witnessed had affected me profoundly, and I caught myself again and again trying to account for the thing—and for the extreme horror it had inspired in me.

But the oddest rumours were those about the sobbing in the old Crowninshield house. The voice seemed to be a woman's, and some of the younger people thought it sounded like Asenath's. It was heard only at rare intervals, and would sometimes be choked off as if by force. There was talk of an investigation, but this was dispelled one day when Asenath appeared in the streets and chatted in a sprightly way with a large number of acquaintances—apologizing for her recent absence and speaking incidentally about the nervous breakdown and hysteria of a guest from Boston. The guest was never seen, but Asenath's appearance left nothing to be said. And then someone complicated matters by whispering that the sobs had once or twice been in a man's voice.

One evening in mid-October, I heard the familiar three-and-two ring at the front door. Answering it myself, I found Edward on the steps, and saw in a moment that his personality was the old one which I had not encountered since the day of his ravings on that terrible ride from Chesuncook. His face was twitching with a mixture of odd emotions in which fear and triumph seemed to share dominion, and he

looked furtively over his shoulder as I closed the door behind him.

Following me clumsily to the study, he asked for some whiskey to steady his nerves. I forbore to question him, but waited till he felt like beginning whatever he wanted to say. At length he ventured some information in a choking voice.

"Asenath has gone, Dan. We had a long talk last night while the servants were out, and I made her promise to stop preying on me. Of course I had certain—certain occult defences I never told you about. She had to give in, but got frightfully angry. Just packed up and started for New York—walked right out to catch the eight-twenty in to Boston. I suppose people will talk, but I can't help that. You needn't mention that there was any trouble—just say she's gone on a long research trip.

"She's probably going to stay with one of her horrible groups of devotees. I hope she'll go west and get a divorce—anyhow, I've made her promise to keep away and let me alone. It was horrible, Dan—she was stealing my body—crowding me out—making a prisoner of me. I lay low and pretended to let her do it, but I had to be on the watch. I could plan if I was careful, for she can't read my mind literally, or in detail. All she could read of my planning was a sort of general mood of rebellion—and she always thought I was helpless. Never thought I could get the best of her... but I had a spell or two that worked."

Derby looked over his shoulder and took some more whiskey.

"I paid off those damned servants this morning when they got back. They were ugly about it, and asked questions, but they went. They're her kin—Innsmouth people—and were hand and glove with her. I hope they'll let me alone—I didn't like the way they laughed when they walked away. I must get as many of Dad's old servants again as I can. I'll move back home now.

"I suppose you think I'm crazy, Dan—but Arkham history ought to hint at things that back up what I've told you—and what I'm going to tell you. You've seen one of the changes, too—in your car after I told you about Asenath that day coming home from Maine. That was when she got me—drove me out of my body. The last thing I remember was when I was all worked up trying to tell you what that she-devil is. Then she got me, and in a flash I was back at the house—in the library where those damned servants had me locked up—and in that cursed fiend's body that isn't even human... You know it was she you must have ridden home with—that preying wolf in my body—You ought to have known the difference!"

I shuddered as Derby paused. Surely, I had known the difference—yet could I accept an explanation as insane as this? But my distracted caller was growing even wilder.

"I had to save myself—I had to,

Dan! She'd have got me for good at Hallowmass—they hold a Sabbat up there beyond Chesuncook, and the sacrifice would have clinched things. She'd have got me for good—she'd have been I, and I'd have been she—forever—too late—My body'd have been hers for good—She'd have been a man, and fully human, just as she wanted to be—I suppose she'd have put me out of the way—killed her own ex-body with me in it, damn her, just as she did before—just as she did, or it did before—"Edward's face was now atrociously distorted, and he bent it uncomfortably close to mine as his voice fell to a whisper.

"You must know what I hinted in the car—that she isn't Asenath at all, but really old Ephraim himself. I suspected it a year and a half ago, and I know it now. Her handwriting shows it when she goes off guard—sometimes she jots down a note in writing that's just like her father's manuscripts, stroke for stroke—and sometimes she says things that nobody but an old man like Ephraim could say. He changed forms with her when he felt death coming—she was the only one he could find with the right kind of brain and a weak enough will—he got her body permanently, just as she almost got mine, and then poisoned the old body he'd put her into. Haven't you seen old Ephraim's soul glaring out of that she-devil's eyes dozens of times—and out of mine when she has control of my body?"

The whisperer was panting, and

paused for breath. I said nothing; and when he resumed his voice was nearer normal. This, I reflected, was a case for the asylum, but I would not be the one to send him there. Perhaps time and freedom from Asenath would do its work. I could see that he would never wish to dabble in morbid occultism again.

"I'll tell you more later—I must have a long rest now. I'll tell you something of the forbidden horrors she led me into—something of the age-old horrors that even now are festering in out-of-the-way corners with a few monstrous priests to keep them alive. Some people know things about the universe that nobody ought to know, and can do things that nobody ought to be able to do. I've been in it up to my neck, but that's the end. Today I'd burn that damned Necronomicon and all the rest if I were librarian at Miskatonic.

"But she can't get me now. I must get out of that accursed house as soon as I can, and settle down at home. You'll help me, I know, if I need help. Those devilish servants, you know—and if people should get too inquisitive about Asenath. You see, I can't give them her address... Then there are certain groups of searchers—certain cults, you know—that might misunderstand our breaking up... some of them have damnably curious ideas and methods. I know you'll stand by me if anything happens—even if I have to tell you a lot that will shock you..."

I had Edward stay and sleep in one of the guest-chambers that night, and in the morning he seemed calmer. We discussed certain possible arrangements for his moving back into the Derby mansion, and I hoped he would lose no time in making the change. He did not call the next evening, but I saw him frequently during the ensuing weeks. We talked as little as possible about strange and unpleasant things, but discussed the renovation of the old Derby house, and the travels which Edward promised to take with my son and me the following summer.

Of Asenath we said almost nothing, for I saw that the subject was a peculiarly disturbing one. Gossip, of course, was rife; but that was no novelty in connection with the strange menage at the old Crowninshield house. One thing I did not like was what Derby's banker let fall in an over-expansive mood at the Miskatonic Club—about the cheques Edward was sending regularly to a Moses and Abigail Sargent and a Eunice Babson in Innsmouth. That looked as if those evil-faced servants were extorting some kind of tribute from him—yet he had not mentioned the matter to me.

I wished that the summer—and my son's Harvard vacation—would come, so that we could get Edward to Europe. He was not, I soon saw, mending as rapidly as I had hoped he would; for there was something a bit hysterical in his occasional exhilaration, while his moods of

fright and depression were altogether too frequent. The old Derby house was ready by December, yet Edward constantly put off moving. Though he hated and seemed to fear the Crowninshield place, he was at the same time queerly enslaved by it. He could not seem to begin dismantling things, and invented every kind of excuse to postpone action. When I pointed this out to him he appeared unaccountably frightened. His father's old butler—who was there with other reacquired servants—told me one day that Edward's occasional prowlings about the house, and especially down in the cellar, looked odd and unwholesome to him. I wondered if Asenath had been writing disturbing letters, but the butler said there was no mail which could have come from her.

It was about Christmas that Derby broke down one evening while calling on me. I was steering the conversation toward next summer's travels when he suddenly shrieked and leaped up from his chair with a look of shocking, uncontrollable fright—a cosmic panic and loathing such as only the nether gulfs of nightmare could bring to any sane mind.

"My brain! My brain! God, Dan—it's tugging—from beyond—knocking—clawing—that she-devil—even now—Ephraim—Kamog! Kamog!—The pit of the shoggoths—Ia! Shub-Niggurath! The Goat with a Thousand Young!...

"The flame—the flame—beyond body, beyond life—in the earth—oh, God!"

I pulled him back to his chair and poured some wine down his throat as his frenzy sank to a dull apathy. He did not resist, but kept his lips moving as if talking to himself. Presently I realized that he was trying to talk to me, and bent my ear to his mouth to catch the feeble words.

"Again, again—she's trying—I might have known—nothing can stop that force; not distance nor magic, nor death—it comes and comes, mostly in the night—I can't leave—it's horrible—oh, God, Dan, if you only knew as I do just how horrible it is..."

When he had slumped down into a stupor I propped him with pillows and let normal sleep overtake him. I did not call a doctor, for I knew what would be said of his sanity, and wished to give nature a chance if I possibly could. He waked at midnight, and I put him to bed upstairs, but he was gone by morning. He had let himself quietly out of the house—and his butler, when called on the wire, said he was at home pacing about the library.

Edward went to pieces rapidly after that. He did not call again, but I went daily to see him. He would always be sitting in his library, staring at nothing and having an air of abnormal listening. Sometimes he talked rationally, but always on trivial topics. Any mention of his trouble,

of future plans, or of Asenath would send him into a frenzy. His butler said he had frightful seizures at night, during which he might eventually do himself harm.

I had a long talk with his doctor, banker, and lawyer, and finally took the physician with two specialist colleagues to visit him. The spasms that resulted from the first questions were violent and pitiable—and that evening a closed car took his poor struggling body to the Arkham Sanitarium. I was made his guardian and called on him twice weekly—almost weeping to hear his wild shrieks, awesome whispers, and dreadful, droning repetitions of such phrases as "I had to do it—I had to do it—it'll get me—it'll get me—down there—down there in the dark—Mother! Mother! Dan! Save me—save me—"

How much hope of recovery there was, no one could say, but I tried my best to be optimistic. Edward must have a home if he emerged, so I transferred his servants to the Derby mansion, which would surely be his sane choice. What to do about the Crowninshield place with its complex arrangements and collections of utterly inexplicable objects I could not decide, so left it momentarily untouched—telling the Derby household to go over and dust the chief rooms once a week, and ordering the furnace man to have a fire on those days.

The final nightmare came before Candlemas—heralded, in cruel irony,

by a false gleam of hope. One morning late in January the sanitarium telephoned to report that Edward's reason had suddenly come back. His continuous memory, they said, was badly impaired; but sanity itself was certain. Of course he must remain some time for observation, but there could be little doubt of the outcome. All going well, he would surely be free in a week.

I hastened over in a flood of delight, but stood bewildered when a nurse took me to Edward's room. The patient rose to greet me, extending his hand with a polite smile; but I saw in an instant that he bore the strangely energized personality which had seemed so foreign to his own nature—the competent personality I had found so vaguely horrible, and which Edward himself had once vowed was the intruding soul of his wife. There was the same blazing vision—so like Asenath's and old Ephraim's—and the same firm mouth; and when he spoke I could sense the same grim, pervasive irony in his voice—the deep irony so redolent of potential evil. This was the person who had driven my car through the night five months before—the person I had not seen since that brief call when he had forgotten the oldtime doorbell signal and stirred such nebulous fears in me—and now he filled me with the same dim feeling of blasphemous alienage and ineffable cosmic hideousness.

He spoke affably of

arrangements for release—and there was nothing for me to do but assent, despite some remarkable gaps in his recent memories. Yet I felt that something was terribly, inexplicably wrong and abnormal. There were horrors in this thing that I could not reach. This was a sane person—but was it indeed the Edward Derby I had known? If not, who or what was it—and where was Edward? Ought it to be free or confined—or ought it to be extirpated from the face of the earth? There was a hint of the abysmally sardonic in everything the creature said—the Asenath-like eyes lent a special and baffling mockery to certain words about the early liberty earned by an especially close confinement! I must have behaved very awkwardly, and was glad to beat a retreat.

All that day and the next I racked my brain over the problem. What had happened? What sort of mind looked out through those alien eyes in Edward's face? I could think of nothing but this dimly terrible enigma, and gave up all efforts to perform my usual work. The second morning the hospital called up to say that the recovered patient was unchanged, and by evening I was close to a nervous collapse—a state I admit, though others will vow it coloured my subsequent vision. I have nothing to say on this point except that no madness of mine could account for all the evidence.

V.

It was in the night—after that second evening—that stark, utter horror burst over me and weighted my spirit with a black, clutching panic from which it can never shake free. It began with a telephone call just before midnight. I was the only one up, and sleepily took down the receiver in the library. No one seemed to be on the wire, and I was about to hang up and go to bed when my ear caught a very faint suspicion of sound at the other end. Was someone trying under great difficulties to talk? As I listened I thought I heard a sort of half-liquid bubbling noise—“glub... glub... glub”—which had an odd suggestion of inarticulate, unintelligible word and syllable divisions. I called “Who is it?” But the only answer was “glub... glub... glub-glub.” I could only assume that the noise was mechanical; but fancying that it might be a case of a broken instrument able to receive but not to send, I added, “I can't hear you. Better hang up and try Information.” Immediately I heard the receiver go on the hook at the other end.

This, I say, was just about midnight. When the call was traced afterward it was found to come from the old Crowninshield house, though it was fully half a week from the housemaid's day to be there. I shall only hint what was found at that house—the upheaval in a remote

cellar storeroom, the tracks, the dirt, the hastily rifled wardrobe, the baffling marks on the telephone, the clumsily used stationery, and the detestable stench lingering over everything. The police, poor fools, have their smug little theories, and are still searching for those sinister discharged servants—who have dropped out of sight amidst the present furore. They speak of a ghoulish revenge for things that were done, and say I was included because I was Edward's best friend and adviser.

Idiots! Do they fancy those brutish clowns could have forged that handwriting? Do they fancy they could have brought what later came? Are they blind to the changes in that body that was Edward's? As for me, I now believe all that Edward Derby ever told me. There are horrors beyond life's edge that we do not suspect, and once in a while man's evil prying calls them just within our range. Ephraim—Asenath—that devil called them in, and they engulfed Edward as they are engulfing me.

Can I be sure that I am safe? Those powers survive the life of the physical form. The next day—in the afternoon, when I pulled out of my prostration and was able to walk and talk coherently—I went to the madhouse and shot him dead for Edward's and the world's sake, but can I be sure till he is cremated? They are keeping the body for some silly autopsies by different

doctors—but I say he must be cremated. He must be cremated—he who was not Edward Derby when I shot him. I shall go mad if he is not, for I may be the next. But my will is not weak—and I shall not let it be undermined by the terrors I know are seething around it. One life—Ephraim, Asenath, and Edward—who now? I will not be driven out of my body... I will not change souls with that bullet-ridden lich in the madhouse!

But let me try to tell coherently of that final horror. I will not speak of what the police persistently ignored—the tales of that dwarfed, grotesque, malodorous thing met by at least three wayfarers in High Street just before two o'clock, and the nature of the single footprints in certain places. I will say only that just about two the doorbell and knocker waked me—doorbell and knocker both, applied alternately and uncertainly in a kind of weak desperation, and each trying to keep Edward's old signal of three-and-two strokes.

Roused from sound sleep, my mind leaped into a turmoil. Derby at the door—and remembering the old code! That new personality had not remembered it... was Edward suddenly back in his rightful state? Why was he here in such evident stress and haste? Had he been released ahead of time, or had he escaped? Perhaps, I thought as I flung on a robe and bounded downstairs, his return to his own self had

brought raving and violence, revoking his discharge and driving him to a desperate dash for freedom. Whatever had happened, he was good old Edward again, and I would help him!

When I opened the door into the elm-arched blackness a gust of insufferably foetid wind almost flung me prostrate. I choked in nausea, and for a second scarcely saw the dwarfed, humped figure on the steps. The summons had been Edward's, but who was this foul, stunted parody? Where had Edward had time to go? His ring had sounded only a second before the door opened.

The caller had on one of Edward's overcoats—its bottom almost touching the ground, and its sleeves rolled back yet still covering the hands. On the head was a slouch hat pulled low, while a black silk muffler concealed the face. As I stepped unsteadily forward, the figure made a semi-liquid sound like that I had heard over the telephone—"glub... glub..."—and thrust at me a large, closely written paper impaled on the end of a long pencil. Still reeling from the morbid and unaccountable foetor, I seized the paper and tried to read it in the light from the doorway.

Beyond question, it was in Edward's script. But why had he written when he was close enough to ring—and why was the script so awkward, coarse and shaky? I could make out nothing in the dim half

light, so edged back into the hall, the dwarf figure clumping mechanically after but pausing on the inner door's threshold. The odour of this singular messenger was really appalling, and I hoped (not in vain, thank God!) that my wife would not wake and confront it.

Then, as I read the paper, I felt my knees give under me and my vision go black. I was lying on the floor when I came to, that accursed sheet still clutched in my fear-rigid hand. This is what it said.

Dan—go to the sanitarium and kill it. Exterminate it. It isn't Edward Derby any more. She got me—it's Asenath—and she has been dead three months and a half. I lied when I said she had gone away. I killed her. I had to. It was sudden, but we were alone and I was in my right body. I saw a candlestick and smashed her head in. She would have got me for good at Hallowmass.

I buried her in the farther cellar storeroom under some old boxes and cleaned up all the traces. The servants suspected next morning, but they have such secrets that they dare not tell the police. I sent them off, but God knows what they—and others of the cult—will do.

I thought for a while I was all right, and then I felt the tugging at my brain. I knew what it was—I ought to have remembered. A soul like hers—or Ephraim's—is half detached, and keeps right on after death as long as the body lasts. She was getting me—making me

change bodies with her—seizing my body and putting me in that corpse of hers buried in the cellar.

I knew what was coming—that's why I snapped and had to go to the asylum. Then it came—I found myself choked in the dark—in Asenath's rotting carcass down there in the cellar under the boxes where I put it. And I knew she must be in my body at the sanitarium—permanently, for it was after Hallowmass, and the sacrifice would work even without her being there—sane, and ready for release as a menace to the world. I was desperate, and in spite of everything I clawed my way out.

I'm too far gone to talk—I couldn't manage to telephone—but I can still write. I'll get fixed up somehow and bring this last word and warning. Kill that fiend if you value the peace and comfort of the world. See that it is cremated. If you don't, it will live on and on, body to body forever, and I can't tell you what it will do. Keep clear of black magic, Dan, it's the devil's business. Goodbye—you've been a great friend. Tell the police whatever they'll believe—and I'm damnable sorry to drag all this on you. I'll be at peace before long—this thing won't hold together much more. Hope you can read this. And kill that thing—kill it.

Yours—Ed.

It was only afterward that I read the last half of this paper, for I had fainted at the end of the third paragraph. I fainted again when I saw and smelled what cluttered up the

threshold where the warm air had struck it. The messenger would not move or have consciousness any more.

The butler, tougher-fibred than I, did not faint at what met him in the hall in the morning. Instead, he telephoned the police. When they came I had been taken upstairs to bed, but the—other mass—lay where it had collapsed in the night. The men put handkerchiefs to their noses.

What they finally found inside Edward's oddly-assorted clothes was mostly liquescent horror. There were bones, too—and a crushed-in skull. Some dental work positively identified the skull as Asenath's.

The EVIL CLERGYMAN.

[RETURN TO TABLE OF CONTENTS]

I was shown into the attic chamber by a grave, intelligent-looking man with quiet clothes and an iron-gray beard, who spoke to me in this fashion:

“Yes, he lived here—but I don’t advise your doing anything. Your curiosity makes you irresponsible. We never come here at night, and it’s only because of his will that we keep it this way. You know what he did. That abominable society took charge at last, and we don’t know where he is buried. There was no way the law or anything else could reach the society.

“I hope you won’t stay till after dark. And I beg of you to let that thing on the table—the thing that looks like a match-box—alone. We don’t know what it is, but we suspect

it has something to do with what he did. We even avoid looking at it very steadily.”

After a time the man left me alone in the attic room. It was very dingy and dusty, and only primitively furnished, but it had a neatness which showed it was not a slum-dweller’s quarters. There were shelves full of theological and classical books, and another bookcase containing treatises on magic—Paracelsus, Albertus Magnus, Trithemius, Hermes Trismegistus, Borellus, and others in a strange alphabet whose titles I could not decipher. The furniture was very plain. There was a door, but it led only into a closet. The only egress was the aperture in the floor up to which the crude, steep staircase led.

The windows were of bull's-eye pattern, and the black oak beams bespoke unbelievable antiquity. Plainly, this house was of the Old World. I seemed to know where I was, but cannot recall what I then knew. Certainly the town was not London. My impression is of a small seaport.

The small object on the table fascinated me intensely. I seemed to know what to do with it, for I drew a pocket electric light—or what looked like one—out of my pocket and nervously tested its flashes. The light was not white but violet, and seemed less like true light than like some radioactive bombardment. I recall that I did not regard it as a common flashlight—indeed, I had a common flashlight in another pocket.

It was getting dark, and the ancient roofs and chimney-pots outside looked very queer through the bull's-eye window-panes. Finally I summoned up courage and propped the small object up on the table against a book—then turned the rays of the peculiar violet light upon it. The light seemed now to be more like a rain of hail or small violet particles than like a continuous beam. As the particles struck the glassy surface at the center of the strange device, they seemed to produce a crackling noise like the sputtering of a vacuum tube through which sparks are passed. The dark glassy surface displayed a pinkish glow, and a vague white shape

seemed to be taking form at its center. Then I noticed that I was not alone in the room—and put the ray-projector back in my pocket.

But the newcomer did not speak—nor did I hear any sound whatever during all the immediately following moments. Everything was shadowy pantomime, as if seen at a vast distance through some intervening haze—although on the other hand the newcomer and all subsequent comers loomed large and close, as if both near and distant, according to some abnormal geometry.

The newcomer was a thin, dark man of medium height attired in the clerical garb of the Anglican church. He was apparently about thirty years old, with a sallow, olive complexion and fairly good features, but an abnormally high forehead. His black hair was well cut and neatly brushed, and he was clean-shaven though blue-chinned with a heavy growth of beard. He wore rimless spectacles with steel bows. His build and lower facial features were like other clergymen I had seen, but he had a vastly higher forehead, and was darker and more intelligent-looking—also more subtly and concealedly evil-looking. At the present moment—having just lighted a faint oil lamp—he looked nervous, and before I knew it he was casting all his magical books into a fireplace on the window side of the room (where the wall slanted sharply) which I had not noticed before. The flames devoured the volumes greedily—leaping up in

strange colors and emitting indescribably hideous odors as the strangely hieroglyphed leaves and wormy bindings succumbed to the devastating element. All at once I saw there were others in the room—grave-looking men in clerical costume, one of whom wore the bands and knee-breeches of a bishop. Though I could hear nothing, I could see that they were bringing a decision of vast import to the first-comer. They seemed to hate and fear him at the same time, and he seemed to return these sentiments. His face set itself into a grim expression, but I could see his right hand shaking as he tried to grip the back of a chair. The bishop pointed to the empty case and to the fireplace (where the flames had died down amidst a charred, non-committal mass), and seemed filled with a peculiar loathing. The first-comer then gave a wry smile and reached out with his left hand toward the small object on the table. Everyone then seemed frightened. The procession of clerics began filing down the steep stairs through the trapdoor in the floor, turning and making menacing gestures as they left. The bishop was last to go.

The first-comer now went to a cupboard on the inner side of the room and extracted a coil of rope. Mounting a chair, he attached one end of the rope to a hook in the great exposed central beam of black oak, and began making a noose with the other end. Realizing he was about

to hang himself, I started forward to dissuade or save him. He saw me and ceased his preparations, looking at me with a kind of triumph which puzzled and disturbed me. He slowly stepped down from the chair and began gliding toward me with a positively wolfish grin on his dark, thin-lipped face.

I felt somehow in deadly peril, and drew out the peculiar ray-projector as a weapon of defense. Why I thought it could help me, I do not know. I turned it on—full in his face, and saw the sallow features glow first with violet and then with pinkish light. His expression of wolfish exultation began to be crowded aside by a look of profound fear—which did not, however, wholly displace the exultation. He stopped in his tracks—then, flailing his arms wildly in the air, began to stagger backwards. I saw he was edging toward the open stair-well in the floor, and tried to shout a warning, but he did not hear me. In another instant he had lurched backward through the opening and was lost to view.

I found difficulty in moving toward the stair-well, but when I did get there I found no crushed body on the floor below. Instead there was a clatter of people coming up with lanterns, for the spell of phantasmal silence had broken, and I once more heard sounds and saw figures as normally tri-dimensional. Something had evidently drawn a crowd to this place. Had there been a noise I had not heard?

Presently the two people (simple villagers, apparently) farthest in the lead saw me—and stood paralyzed. One of them shrieked loudly and reverberantly:

“Ahrh!... It be’ee, zur? Again?”

Then they all turned and fled frantically. All, that is, but one. When the crowd was gone I saw the grave-bearded man who had brought me to this place—standing alone with a lantern. He was gazing at me gaspingly and fascinatedly, but did not seem afraid. Then he began to ascend the stairs, and joined me in the attic. He spoke:

“So you didn’t let it alone! I’m sorry. I know what has happened. It happened once before, but the man got frightened and shot himself. You ought not to have made him come back. You know what he wants. But you mustn’t get frightened like the other man he got. Something very strange and terrible has happened to you, but it didn’t get far enough to hurt your mind and personality. If you’ll keep cool, and accept the need for making certain radical readjustments in your life, you can keep right on enjoying the world, and the fruits of your scholarship. But you can’t live here—and I don’t think you’ll wish to go back to London. I’d advise America.

“You mustn’t try anything more with that—thing. Nothing can be put back now. It would only make matters worse to do—or summon—anything. You are not as badly off

as you might be—but you must get out of here at once and stay away. You’d better thank Heaven it didn’t go further....

“I’m going to prepare you as bluntly as I can. There’s been a certain change—in your personal appearance. He always causes that. But in a new country you can get used to it. There’s a mirror up at the other end of the room, and I’m going to take you to it. You’ll get a shock—though you will see nothing repulsive.”

I was now shaking with a deadly fear, and the bearded man almost had to hold me up as he walked me across the room to the mirror, the faint lamp (i.e., that formerly on the table, not the still fainter lantern he had brought) in his free hand. This is what I saw in the glass:

A thin, dark man of medium stature attired in the clerical garb of the Anglican church, apparently about thirty, and with rimless, steel-bowed glasses glistening beneath a sallow, olive forehead of abnormal height.

It was the silent first-comer who had burned his books.

For all the rest of my life, in outward form, I was to be that man!

1934:

A GLUT *of* GHOSTWRITING.

[RETURN TO TABLE OF CONTENTS]

H.P. Lovecraft continued to enjoy a glut of business in his ghost-writing operations in 1934, so much so that he started farming the work out to talented friends; yet he still wasn’t making enough money from the business to live on. It’s unfortunate that among all his friends there apparently wasn’t one with enough business sense to advise him on this; perhaps if he’d had a decent income, he could have varied his diet enough to avoid the colon cancer that would eventually take his life.

In any case, these intrigues, together with an unusually ambitious summer itinerary that included a bicycle tour of Nantucket, kept Lovecraft busy for most of 1934.

Late that year, he tucked into one of his very best novellas, *The Shadow out of Time*.

By the time he was working on this title, though, Lovecraft was starting to complain of “indigestion.” This would get worse and worse over the subsequent year or two, and in 1937 it would reveal itself as advanced, inoperable colon cancer.

The SHADOW out of TIME.

[RETURN TO TABLE OF CONTENTS]

I.

After twenty-two years of nightmare and terror, saved only by a desperate conviction of the mythical source of certain impressions, I am unwilling to vouch for the truth of that which I think I found in Western Australia on the night of 17-18 July 1935. There is reason to hope that my experience was wholly or partly an hallucination—for which, indeed, abundant causes existed. And yet, its realism was so hideous that I sometimes find hope impossible.

If the thing did happen, then man must be prepared to accept notions of the cosmos, and of his own place in the seething vortex of

time, whose merest mention is paralysing. He must, too, be placed on guard against a specific, lurking peril which, though it will never engulf the whole race, may impose monstrous and unguessable horrors upon certain venturesome members of it.

It is for this latter reason that I urge, with all the force of my being, final abandonment of all the attempts at unearthing those fragments of unknown, primordial masonry which my expedition set out to investigate.

Assuming that I was sane and awake, my experience on that night was such as has befallen no man before. It was, moreover, a frightful confirmation of all I had sought to dismiss as myth and dream.

Mercifully there is no proof, for in my fright I lost the awesome object which would—if real and brought out of that noxious abyss—have formed irrefutable evidence.

When I came upon the horror I was alone—and I have up to now told no one about it. I could not stop the others from digging in its direction, but chance and the shifting sand have so far saved them from finding it. Now I must formulate some definite statement—not only for the sake of my own mental balance, but to warn such others as may read it seriously.

These pages—much in whose earlier parts will be familiar to close readers of the general and scientific press—are written in the cabin of the ship that is bringing me home. I shall give them to my son, Professor Wingate Peaslee of Miskatonic University—the only member of my family who stuck to me after my queer amnesia of long ago, and the man best informed on the inner facts of my case. Of all living persons, he is least likely to ridicule what I shall tell of that fateful night.

I did not enlighten him orally before sailing, because I think he had better have the revelation in written form. Reading and re-reading at leisure will leave with him a more convincing picture than my confused tongue could hope to convey.

He can do anything that he thinks best with this account—showing it, with suitable comment, in any quarters where it will be likely

to accomplish good. It is for the sake of such readers as are unfamiliar with the earlier phases of my case that I am prefacing the revelation itself with a fairly ample summary of its background.

My name is Nathaniel Wingate Peaslee, and those who recall the newspaper tales of a generation back—or the letters and articles in psychological journals six or seven years ago—will know who and what I am. The press was filled with the details of my strange amnesia in 1908-13, and much was made of the traditions of horror, madness, and witchcraft which lurked behind the ancient Massachusetts town then and now forming my place of residence. Yet I would have it known that there is nothing whatever of the mad or sinister in my heredity and early life. This is a highly important fact in view of the shadow which fell so suddenly upon me from outside sources.

It may be that centuries of dark brooding had given to crumbling, whisper-haunted Arkham a peculiar vulnerability as regards such shadows—though even this seems doubtful in the light of those other cases which I later came to study. But the chief point is that my own ancestry and background are altogether normal. What came, came from somewhere else—where I even now hesitate to assert in plain words.

I am the son of Jonathan and Hannah (Wingate) Peaslee, both of wholesome old Haverhill stock. I

was born and reared in Haverhill—at the old homestead in Boardman Street near Golden Hill—and did not go to Arkham till I entered Miskatonic University as instructor of political economy in 1895.

For thirteen years more my life ran smoothly and happily. I married Alice Keezar of Haverhill in 1896, and my three children, Robert, Wingate and Hannah were born in 1898, 1900, and 1903, respectively. In 1898 I became an associate professor, and in 1902 a full professor. At no time had I the least interest in either occultism or abnormal psychology.

It was on Thursday, 14 May 1908, that the queer amnesia came. The thing was quite sudden, though later I realized that certain brief, glimmering visions of several hours previous—chaotic visions which disturbed me greatly because they were so unprecedented—must have formed premonitory symptoms. My head was aching, and I had a singular feeling—altogether new to me—that some one else was trying to get possession of my thoughts.

The collapse occurred about 10.20 a.m., while I was conducting a class in Political Economy VI—history and present tendencies of economics—for juniors and a few sophomores. I began to see strange shapes before my eyes, and to feel that I was in a grotesque room other than the classroom.

My thoughts and speech wandered from my subject, and the

students saw that something was gravely amiss. Then I slumped down, unconscious, in my chair, in a stupor from which no one could arouse me. Nor did my rightful faculties again look out upon the daylight of our normal world for five years, four months, and thirteen days.

It is, of course, from others that I have learned what followed. I showed no sign of consciousness for sixteen and a half hours though removed to my home at 27 Crane Street, and given the best of medical attention.

At 3 a.m. 15 May my eyes opened and I began to speak, but before long the doctor and my family were thoroughly frightened by the trend of my expression and language. It was clear that I had no remembrance of my identity and my past, though for some reason I seemed anxious to conceal this lack of knowledge. My eyes glazed strangely at the persons around me, and the flections of my facial muscles were altogether unfamiliar.

Even my speech seemed awkward and foreign. I used my vocal organs clumsily and gropingly, and my diction had a curiously stilted quality, as if I had laboriously learned the English language from books. The pronunciation was barbarously alien, whilst the idiom seemed to include both scraps of curious archaism and expressions of a wholly incomprehensible cast.

Of the latter, one in particular was very potently—even

terrifiedly—recalled by the youngest of the physicians twenty years afterward. For at that late period such a phrase began to have an actual currency—first in England and then in the United States—and though of much complexity and indisputable newness, it reproduced in every least particular the mystifying words of the strange Arkham patient of 1908.

Physical strength returned at once, although I required an odd amount of re-education in the use of my hands, legs, and bodily apparatus in general. Because of this and other handicaps inherent in the mnemonic lapse, I was for some time kept under strict medical care.

When I saw that my attempts to conceal the lapse had failed, I admitted it openly, and became eager for information of all sorts. Indeed, it seemed to the doctors that I lost interest in my proper personality as soon as I found the case of amnesia accepted as a natural thing.

They noticed that my chief efforts were to master certain points in history, science, art, language, and folklore—some of them tremendously abstruse, and some childishly simple—which remained, very oddly in many cases, outside my consciousness.

At the same time they noticed that I had an inexplicable command of many almost unknown sorts of knowledge—a command which I seemed to wish to hide rather than display. I would inadvertently refer,

with casual assurance, to specific events in dim ages outside of the range of accepted history—passing off such references as a jest when I saw the surprise they created. And I had a way of speaking of the future which two or three times caused actual fright.

These uncanny flashes soon ceased to appear, though some observers laid their vanishment more to a certain furtive caution on my part than to any waning of the strange knowledge behind them. Indeed, I seemed anomalously avid to absorb the speech, customs, and perspectives of the age around me; as if I were a studious traveller from a far, foreign land.

As soon as permitted, I haunted the college library at all hours; and shortly began to arrange for those odd travels, and special courses at American and European Universities, which evoked so much comment during the next few years.

I did not at any time suffer from a lack of learned contacts, for my case had a mild celebrity among the psychologists of the period. I was lectured upon as a typical example of secondary personality—even though I seemed to puzzle the lecturers now and then with some bizarre symptoms or some queer trace of carefully veiled mockery.

Of real friendliness, however, I encountered little. Something in my aspect and speech seemed to excite vague fears and aversions in every one I met, as if I were a being

infinitely removed from all that is normal and healthful. This idea of a black, hidden horror connected with incalculable gulfs of some sort of distance was oddly widespread and persistent.

My own family formed no exception. From the moment of my strange waking my wife had regarded me with extreme horror and loathing, vowing that I was some utter alien usurping the body of her husband. In 1910 she obtained a legal divorce, nor would she ever consent to see me even after my return to normality in 1913. These feelings were shared by my elder son and my small daughter, neither of whom I have ever seen since.

Only my second son, Wingate, seemed able to conquer the terror and repulsion which my change aroused. He indeed felt that I was a stranger, but though only eight years old held fast to a faith that my proper self would return. When it did return he sought me out, and the courts gave me his custody. In succeeding years he helped me with the studies to which I was driven, and today, at thirty-five, he is a professor of psychology at Miskatonic.

But I do not wonder at the horror caused—for certainly, the mind, voice, and facial expression of the being that awakened on 15 May 1908, were not those of Nathaniel Wingate Peaslee.

I will not attempt to tell much of my life from 1908 to 1913, since readers may glean the outward

essentials—as I largely had to do—from files of old newspapers and scientific journals.

I was given charge of my funds, and spent them slowly and on the whole wisely, in travel and in study at various centres of learning. My travels, however, were singular in the extreme, involving long visits to remote and desolate places.

In 1909 I spent a month in the Himalayas, and in 1911 roused much attention through a camel trip into the unknown deserts of Arabia. What happened on those journeys I have never been able to learn.

During the summer of 1912 I chartered a ship and sailed in the Arctic, north of Spitzbergen, afterward showing signs of disappointment.

Later in that year I spent weeks—alone beyond the limits of previous or subsequent exploration in the vast limestone cavern systems of western Virginia—black labyrinths so complex that no retracing of my steps could even be considered.

My sojourns at the universities were marked by abnormally rapid assimilation, as if the secondary personality had an intelligence enormously superior to my own. I have found, also, that my rate of reading and solitary study was phenomenal. I could master every detail of a book merely by glancing over it as fast as I could turn the leaves; while my skill at interpreting complex figures in an instant was veritably awesome.

At times there appeared almost ugly reports of my power to influence the thoughts and acts of others, though I seemed to have taken care to minimize displays of this faculty.

Other ugly reports concerned my intimacy with leaders of occultist groups, and scholars suspected of connection with nameless bands of abhorrent elder-world hierophants. These rumours, though never proved at the time, were doubtless stimulated by the known tenor of some of my reading—for the consultation of rare books at libraries cannot be effected secretly.

There is tangible proof—in the form of marginal notes—that I went minutely through such things as the Comte d'Erlette's *Cultes des Goules*, Ludvig Prinn's *De Vermis Mysteriis*, the *Unaussprechlichen Kulten* of von Junzt, the surviving fragments of the puzzling *Book of Eibon*, and the dreaded *Necronomicon* of the mad Arab Abdul Alhazred. Then, too, it is undeniable that a fresh and evil wave of underground cult activity set in about the time of my odd mutation.

In the summer of 1913 I began to display signs of ennui and flagging interest, and to hint to various associates that a change might soon be expected in me. I spoke of returning memories of my earlier life—though most auditors judged me insincere, since all the recollections I gave were casual, and such as might have been learned from my old private papers.

About the middle of August I

returned to Arkham and re-opened my long-closed house in Crane Street. Here I installed a mechanism of the most curious aspect, constructed piecemeal by different makers of scientific apparatus in Europe and America, and guarded carefully from the sight of any one intelligent enough to analyse it.

Those who did see it—a workman, a servant, and the new housekeeper—say that it was a queer mixture of rods, wheels, and mirrors, though only about two feet tall, one foot wide, and one foot thick. The central mirror was circular and convex. All this is borne out by such makers of parts as can be located.

On the evening of Friday, 26 September, I dismissed the housekeeper and the maid until noon of the next day. Lights burned in the house till late, and a lean, dark, curiously foreign-looking man called in an automobile.

It was about one a.m. that the lights were last seen. At 2.15 a.m. a policeman observed the place in darkness, but the stranger's motor still at the curb. By 4 o'clock the motor was certainly gone.

It was at 6 o'clock that a hesitant, foreign voice on the telephone asked Dr Wilson to call at my house and bring me out of a peculiar faint. This call—a long-distance one—was later traced to a public booth in the North Station in Boston, but no sign of the lean foreigner was ever unearthed.

When the doctor reached my house he found me unconscious in

the sitting room—in an easy-chair with a table drawn up before it. On the polished top were scratches showing where some heavy object had rested. The queer machine was gone, nor was anything afterward heard of it. Undoubtedly the dark, lean foreigner had taken it away.

In the library grate were abundant ashes, evidently left from the burning of the every remaining scrap of paper on which I had written since the advent of the amnesia. Dr Wilson found my breathing very peculiar, but after a hypodermic injection it became more regular.

At 11.15 a.m., 27 September, I stirred vigorously, and my hitherto masklike face began to show signs of expression. Dr Wilson remarked that the expression was not that of my secondary personality, but seemed much like that of my normal self. About 11.30 I muttered some very curious syllables—syllables which seemed unrelated to any human speech. I appeared, too, to struggle against something. Then, just after noon—the housekeeper and the maid having meanwhile returned—I began to mutter in English.

“—of the orthodox economists of that period, Jevons typifies the prevailing trend toward scientific correlation. His attempt to link the commercial cycle of prosperity and depression with the physical cycle of the solar spots forms perhaps the apex of—”

Nathaniel Wingate Peaslee had

come back—a spirit in whose time scale it was still Thursday morning in 1908, with the economics class gazing up at the battered desk on the platform.

II.

My reabsorption into normal life was a painful and difficult process. The loss of over five years creates more complications than can be imagined, and in my case there were countless matters to be adjusted.

What I heard of my actions since 1908 astonished and disturbed me, but I tried to view the matter as philosophically as I could. At last, regaining custody of my second son, Wingate, I settled down with him in the Crane Street house and endeavoured to resume my teaching—my old professorship having been kindly offered me by the college.

I began work with the February, 1914, term, and kept at it just a year. By that time I realized how badly my experience had shaken me. Though perfectly sane—I hoped—and with no flaw in my original personality, I had not the nervous energy of the old days. Vague dreams and queer ideas continually haunted me, and when the outbreak of the World War turned my mind to history I found myself thinking of periods and events in the oddest possible fashion.

My conception of time, my ability to distinguish between consecutiveness and simultaneousness—seemed subtly disordered so that I formed chimerical notions about living in one age and casting one's mind all over eternity for knowledge of past and future ages.

The war gave me strange impressions of remembering some of its far-off consequences—as if I knew how it was coming out and could look back upon it in the light of future information. All such quasi-memories were attended with much pain, and with a feeling that some artificial psychological barrier was set against them.

When I diffidently hinted to others about my impressions I met with varied responses. Some persons looked uncomfortably at me, but men in the mathematics department spoke of new developments in those theories of relativity—then discussed only in learned circles—which were later to become so famous. Dr. Albert Einstein, they said, was rapidly reducing time to the status of a mere dimension.

But the dreams and disturbed feelings gained on me, so that I had to drop my regular work in 1915. Certainly the impressions were taking an annoying shape—giving me the persistent notion that my amnesia had formed some unholy sort of exchange; that the secondary personality had indeed suffered displacement.

Thus I was driven to vague and

frighted speculations concerning the whereabouts of my true self during the years that another had held my body. The curious knowledge and strange conduct of my body's late tenant troubled me more and more as I learned further details from persons, papers, and magazines.

Queernesses that had baffled others seemed to harmonize terribly with some background of black knowledge which festered in the chasms of my subconscious. I began to search feverishly for every scrap of information bearing on the studies and travels of that other one during the dark years.

Not all of my troubles were as semi-abstract as this. There were the dreams—and these seemed to grow in vividness and concreteness. Knowing how most would regard them, I seldom mentioned them to anyone but my son or certain trusted psychologists, but eventually I commenced a scientific study of other cases in order to see how typical or nontypical such visions might be among amnesia victims.

My results, aided by psychologists, historians, anthropologists, and mental specialists of wide experience, and by a study that included all records of split personalities from the days of daemonic-possession legends to the medically realistic present, at first bothered me more than they consoled me.

I soon found that my dreams had, indeed, no counterpart in the overwhelming bulk of true amnesia

cases. There remained, however, a tiny residue of accounts which for years baffled and shocked me with their parallelism to my own experience. Some of them were bits of ancient folklore; others were case histories in the annals of medicine; one or two were anecdotes obscurely buried in standard histories.

It thus appeared that, while my special kind of affliction was prodigiously rare, instances of it had occurred at long intervals ever since the beginning of men's annals. Some centuries might contain one, two, or three cases, others none—or at least none whose record survived.

The essence was always the same—a person of keen thoughtfulness seized a strange secondary life and leading for a greater or lesser period an utterly alien existence typified at first by vocal and bodily awkwardness, and later by a wholesale acquisition of scientific, historic, artistic, and anthropologic knowledge; an acquisition carried on with feverish zest and with a wholly abnormal absorptive power. Then a sudden return of rightful consciousness, intermittently plagued ever after with vague unplaceable dreams suggesting fragments of some hideous memory elaborately blotted out.

And the close resemblance of those nightmares to my own—even in some of the smallest particulars—left no doubt in my mind of their significantly typical nature. One or two of the cases had an added ring

of faint, blasphemous familiarity, as if I had heard of them before through some cosmic channel too morbid and frightful to contemplate. In three instances there was specific mention of such an unknown machine as had been in my house before the second change.

Another thing that worried me during my investigation was the somewhat greater frequency of cases where a brief, elusive glimpse of the typical nightmares was afforded to persons not visited by the well-defined amnesia.

These persons were largely of mediocre mind or less—some so primitive that they could scarcely be thought of as vehicles for abnormal scholarship and preternatural mental acquisitions. For a second they would be fired with alien force—then a backward lapse, and a thin, swift-fading memory of unhuman horrors.

There had been at least three such cases during the past half century—one only fifteen years before. Had something been groping blindly through time from some unsuspected abyss in Nature? Were these faint cases monstrous, sinister experiments of a kind and authorship utterly beyond sane belief?

Such were a few of the formless speculations of my weaker hours—fancies abetted by myths which my studies uncovered. For I could not doubt but that certain persistent legends of immemorial antiquity, apparently unknown to the victims and physicians connected with

recent amnesia cases, formed a striking and awesome elaboration of memory lapses such as mine.

Of the nature of the dreams and impressions which were growing so clamorous I still almost fear to speak. They seemed to savor of madness, and at times I believed I was indeed going mad. Was there a special type of delusion afflicting those who had suffered lapses of memory? Conceivably, the efforts of the subconscious mind to fill up a perplexing blank with pseudo-memories might give rise to strange imaginative vagaries.

This indeed—though an alternative folklore theory finally seemed to me more plausible—was the belief of many of the alienists who helped me in my search for parallel cases, and who shared my puzzlement at the exact resemblances sometimes discovered.

They did not call the condition true insanity, but classed it rather among neurotic disorders. My course in trying to track down and analyze it, instead of vainly seeking to dismiss or forget it, they heartily endorsed as correct according to the best psychological principles. I especially valued the advice of such physicians as had studied me during my possession by the other personality.

My first disturbances were not visual at all, but concerned the more abstract matters which I have mentioned. There was, too, a feeling of profound and inexplicable horror concerning myself. I developed a

queer fear of seeing my own form, as if my eyes would find it something utterly alien and inconceivably abhorrent.

When I did glance down and behold the familiar human shape in quiet grey or blue clothing, I always felt a curious relief, though in order to gain this relief I had to conquer an infinite dread. I shunned mirrors as much as possible, and was always shaved at the barber's.

It was a long time before I correlated any of these disappointed feelings with the fleeting, visual impressions which began to develop. The first such correlation had to do with the odd sensation of an external, artificial restraint on my memory.

I felt that the snatches of sight I experienced had a profound and terrible meaning, and a frightful connexion with myself, but that some purposeful influence held me from grasping that meaning and that connexion. Then came that queer-ness about the element of time, and with it desperate efforts to place the fragmentary dream-glimpses in the chronological and spatial pattern.

The glimpses themselves were at first merely strange rather than horrible. I would seem to be in an enormous vaulted chamber whose lofty stone groinings were well-nigh lost in the shadows overhead. In whatever time or place the scene might be, the principle of the arch was known as fully and used as extensively as by the Romans.

There were colossal, round

windows and high, arched doors, and pedestals or tables each as tall as the height of an ordinary room. Vast shelves of dark wood lined the walls, holding what seemed to be volumes of immense size with strange hieroglyphs on their backs.

The exposed stonework held curious carvings, always in curvilinear mathematical designs, and there were chiselled inscriptions in the same characters that the huge books bore. The dark granite masonry was of a monstrous megathic type, with lines of convex-topped blocks fitting the concave-bottomed courses which rested upon them.

There were no chairs, but the tops of the vast pedestals were littered with books, papers, and what seemed to be writing materials—oddly figured jars of a purplish metal, and rods with stained tips. Tall as the pedestals were, I seemed at times able to view them from above. On some of them were great globes of luminous crystal serving as lamps, and inexplicable machines formed of vitreous tubes and metal rods.

The windows were glazed, and latticed with stout-looking bars. Though I dared not approach and peer out them, I could see from where I was the waving tops of singular fern-like growths. The floor was of massive octagonal flagstones, while rugs and hangings were entirely lacking.

Later I had visions of sweeping through Cyclopean corridors of

stone, and up and down gigantic inclined planes of the same monstrous masonry. There were no stairs anywhere, nor was any passageway less than thirty feet wide. Some of the structures through which I floated must have towered in the sky for thousands of feet.

There were multiple levels of black vaults below, and never-opened trap-doors, sealed down with metal bands and holding dim suggestions of some special peril.

I seemed to be a prisoner, and horror hung broodingly over everything I saw. I felt that the mocking curvilinear hieroglyphs on the walls would blast my soul with their message were I not guarded by a merciful ignorance.

Still later my dreams included vistas from the great round windows, and from the titanic flat roof, with its curious gardens, wide barren area, and high, scalloped parapet of stone, to which the topmost of the inclined planes led.

There were almost endless leagues of giant buildings, each in its garden, and ranged along paved roads fully 200 feet wide. They differed greatly in aspect, but few were less than 500 feet square or a thousand feet high. Many seemed so limitless that they must have had a frontage of several thousand feet, while some shot up to mountainous altitudes in the grey, steamy heavens.

They seemed to be mainly of stone or concrete, and most of them embodied the oddly curvilinear type

of masonry noticeable in the building that held me. Roofs were flat and garden-covered, and tended to have scalloped parapets. Sometimes there were terraces and higher levels, and wide, cleared spaces amidst the gardens. The great roads held hints of motion, but in the earlier visions I could not resolve this impression into details.

In certain places I beheld enormous dark cylindrical towers which climbed far above any of the other structures. These appeared to be of a totally unique nature and shewed signs of prodigious age and dilapidation. They were built of a bizarre type of square-cut basalt masonry, and tapered slightly toward their rounded tops. Nowhere in any of them could the least traces of windows or other apertures save huge doors be found. I noticed also some lower buildings—all crumbling with the weathering of aeons—which resembled these dark, cylindrical towers in basic architecture. Around all these aberrant piles of square-cut masonry there hovered an inexplicable aura of menace and concentrated fear, like that bred by the sealed trap-doors.

The omnipresent gardens were almost terrifying in their strangeness, with bizarre and unfamiliar forms of vegetation nodding over broad paths lined with curiously carven monoliths. Abnormally vast fern-like growths predominated—some green, and some of a ghastly, fungoid pallor.

Among them rose great spectral

things resembling calamites, whose bamboo-like trunks towered to fabulous heights. Then there were tufted forms like fabulous cycads, and grotesque dark-green shrubs and trees of coniferous aspect.

Flowers were small, colourless, and unrecognizable, blooming in geometrical beds and at large among the greenery.

In a few of the terrace and roof-top gardens were larger and more blossoms of most offensive contours and seeming to suggest artificial breeding. Fungi of inconceivable size, outlines, and colours speckled the scene in patterns bespeaking some unknown but well-established horticultural tradition. In the larger gardens on the ground there seemed to be some attempt to preserve the irregularities of Nature, but on the roofs there was more selectiveness, and more evidences of the topiary art.

The skies were almost always moist and cloudy, and sometimes I would seem to witness tremendous rains. Once in a while, though, there would be glimpses of the sun—which looked abnormally large—and of the moon, whose markings held a touch of difference from the normal that I could never quite fathom. When—very rarely—the night sky was clear to any extent, I beheld constellations which were nearly beyond recognition. Known outlines were sometimes approximated, but seldom duplicated; and from the position of the few groups

I could recognize, I felt I must be in the earth's southern hemisphere, near the Tropic of Capricorn.

The far horizon was always steamy and indistinct, but I could see that great jungles of unknown tree-ferns, calamites, lepidodendra, and sigillaria lay outside the city, their fantastic frondage waving mockingly in the shifting vapours. Now and then there would be suggestions of motion in the sky, but these my early visions never resolved.

By the autumn of 1914 I began to have infrequent dreams of strange floatings over the city and through the regions around it. I saw interminable roads through forests of fearsome growths with mottled, fluted, and banded trunks, and past other cities as strange as the one which persistently haunted me.

I saw monstrous constructions of black or iridescent tone in glades and clearings where perpetual twilight reigned, and traversed long causeways over swamps so dark that I could tell but little of their moist, towering vegetation.

Once I saw an area of countless miles strewn with age-blasted basaltic ruins whose architecture had been like that of the few windowless, round-topped towers in the haunting city.

And once I saw the sea—a boundless, steamy expanse beyond the colossal stone piers of an enormous town of domes and arches. Great shapeless suggestions of shadow moved over it, and here and

there its surface was vexed with anomalous spoutings.

III.

As I have said, it was not immediately that these wild visions began to hold their terrifying quality. Certainly, many persons have dreamed intrinsically stranger things—things compounded of unrelated scraps of daily life, pictures, and reading, and arranged in fantastically novel forms by the unchecked caprices of sleep.

For some time I accepted the visions as natural, even though I had never before been an extravagant dreamer. Many of the vague anomalies, I argued, must have come from trivial sources too numerous to track down; while others seemed to reflect a common text book knowledge of the plants and other conditions of the primitive world of a hundred and fifty million years ago—the world of the Permian or Triassic age.

In the course of some months, however, the element of terror did figure with accumulating force. This was when the dreams began so unfailingly to have the aspect of memories, and when my mind began to link them with my growing abstract disturbances—the feeling of mnemonic restraint, the curious impressions regarding time, and sense of a loathsome exchange with my secondary personality of

1908-13, and, considerably later, the inexplicable loathing of my own person.

As certain definite details began to enter the dreams, their horror increased a thousandfold—until by October, 1915, I felt I must do something. It was then that I began an intensive study of other cases of amnesia and visions, feeling that I might thereby objectivise my trouble and shake clear of its emotional grip.

However, as before mentioned, the result was at first almost exactly opposite. It disturbed me vastly to find that my dreams had been so closely duplicated; especially since some of the accounts were too early to admit of any geological knowledge—and therefore of any idea of primitive landscapes—on the subjects' part.

What is more, many of these accounts supplied very horrible details and explanations in connexion with the visions of great buildings and jungle gardens—and other things. The actual sights and vague impressions were bad enough, but what was hinted or asserted by some of the other dreamers savored of madness and blasphemy. Worst of all, my own pseudo-memory was aroused to wilder dreams and hints of coming revelations. And yet most doctors deemed my course, on the whole, an advisable one.

I studied psychology systematically, and under the prevailing stimulus my son Wingate did the same—his studies leading eventually

to his present professorship. In 1917 and 1918 I took special courses at Miskatonic. Meanwhile, my examination of medical, historical, and anthropological records became indefatigable, involving travels to distant libraries, and finally including even a reading of the hideous books of forbidden elder lore in which my secondary personality had been so disturbingly interested.

Some of the latter were the actual copies I had consulted in my altered state, and I was greatly disturbed by certain marginal notations and ostensible corrections of the hideous text in a script and idiom which somehow seemed oddly unhuman.

These markings were mostly in the respective languages of the various books, all of which the writer seemed to know with equal, though obviously academic, facility. One note appended to von Junzt's *Unaussprechlichen Kulten*, however, was alarmingly otherwise. It consisted of certain curvilinear hieroglyphs in the same ink as that of the German corrections, but following no recognized human pattern. And these hieroglyphs were closely and unmistakably akin to the characters constantly met with in my dreams—characters whose meaning I would sometimes momentarily fancy I knew, or was just on the brink of recalling.

To complete my black confusion, my librarians assured me that, in view of previous examinations and

records of consultation of the volumes in question, all of these notations must have been made by myself in my secondary state. This despite the fact that I was and still am ignorant of three of the languages involved.

Piecing together the scattered records, ancient and modern, anthropological and medical, I found a fairly consistent mixture of myth and hallucination whose scope and wildness left me utterly dazed. Only one thing consoled me, the fact that the myths were of such early existence. What lost knowledge could have brought pictures of the Palaeozoic or Mesozoic landscape into these primitive fables, I could not even guess; but the pictures had been there. Thus, a basis existed for the formation of a fixed type of delusion.

Cases of amnesia no doubt created the general myth pattern—but afterward the fanciful accretions of the myths must have reacted on amnesia sufferers and coloured their pseudo-memories. I myself had read and heard all the early tales during my memory lapse—my quest had amply proved that. Was it not natural, then, for my subsequent dreams and emotional impressions to become coloured and moulded by what my memory subtly held over from my secondary state?

A few of the myths had significant connexions with other cloudy legends of the pre-human world, especially those Hindu tales

involving stupefying gulfs of time and forming part of the lore of modern theosophists.

Primal myth and modern delusion joined in their assumption that mankind is only one—perhaps the least—of the highly evolved and dominant races of this planet's long and largely unknown career. Things of inconceivable shape, they implied, had reared towers to the sky and delved into every secret of Nature before the first amphibian forbear of man had crawled out of the hot sea 300 million years ago.

Some had come down from the stars; a few were as old as the cosmos itself, others had arisen swiftly from terrene germs as far behind the first germs of our life-cycle as those germs are behind ourselves. Spans of thousands of millions of years, and linkages to other galaxies and universes, were freely spoken of. Indeed, there was no such thing as time in its humanly accepted sense.

But most of the tales and impressions concerned a relatively late race, of a queer and intricate shape, resembling no life-form known to science, which had lived till only fifty million years before the advent of man. This, they indicated, was the greatest race of all because it alone had conquered the secret of time.

It had learned all things that ever were known or ever would be known on the earth, through the power of its keener minds to project themselves into the past and future, even

through gulfs of millions of years, and study the lore of every age. From the accomplishments of this race arose all legends of prophets, including those in human mythology.

In its vast libraries were volumes of texts and pictures holding the whole of earth's annals—histories and descriptions of every species that had ever been or that ever would be, with full records of their arts, their achievements, their languages, and their psychologies.

With this aeon-embracing knowledge, the Great Race chose from every era and life-form such thoughts, arts, and processes as might suit its own nature and situation. Knowledge of the past, secured through a kind of mind-casting outside the recognized senses, was harder to glean than knowledge of the future.

In the latter case the course was easier and more material. With suitable mechanical aid a mind would project itself forward in time, feeling its dim, extra-sensory way till it approached the desired period. Then, after preliminary trials, it would seize on the best discoverable representative of the highest of that period's life-forms. It would enter the organism's brain and set up therein its own vibrations, while the displaced mind would strike back to the period of the displacer, remaining in the latter's body till a reverse process was set up.

The projected mind, in the body of the organism of the future, would then pose as a member of the race

whose outward form it wore, learning as quickly as possible all that could be learned of the chosen age and its massed information and techniques.

Meanwhile the displaced mind, thrown back to the displacer's age and body, would be carefully guarded. It would be kept from harming the body it occupied, and would be drained of all its knowledge by trained questioners. Often it could be questioned in its own language, when previous quests into the future had brought back records of that language.

If the mind came from a body whose language the Great Race could not physically reproduce, clever machines would be made, on which the alien speech could be played as on a musical instrument.

The Great Race's members were immense rugose cones ten feet high, and with head and other organs attached to foot-thick, distensible limbs spreading from the apexes. They spoke by the clicking or scraping of huge paws or claws attached to the end of two of their four limbs, and walked by the expansion and contraction of a viscous layer attached to their vast, ten-foot bases.

When the captive mind's amazement and resentment had worn off, and when—assuming that it came from a body vastly different from the Great Race's—it had lost its horror at its unfamiliar temporary form, it was permitted to study its

new environment and experience a wonder and wisdom approximating that of its displacer.

With suitable precautions, and in exchange for suitable services, it was allowed to rove all over the habitable world in titan airships or on the huge boatlike atomic-engined vehicles which traversed the great roads, and to delve freely into the libraries containing the records of the planet's past and future.

This reconciled many captive minds to their lot; since none were other than keen, and to such minds the unveiling of hidden mysteries of earth—closed chapters of inconceivable pasts and dizzying vortices of future time which include the years ahead of their own natural ages—forms always, despite the abysmal horrors often unveiled, the supreme experience of life.

Now and then certain captives were permitted to meet other captive minds seized from the future—to exchange thoughts with consciousnesses living a hundred or a thousand or a million years before or after their own ages. And all were urged to write copiously in their own languages of themselves and their respective periods; such documents to be filed in the great central archives.

It may be added that there was one special type of captive whose privileges were far greater than those of the majority. These were the dying permanent exiles, whose bodies in the future had been seized by

keen-minded members of the Great Race who, faced with death, sought to escape mental extinction.

Such melancholy exiles were not as common as might be expected, since the longevity of the Great Race lessened its love of life—especially among those superior minds capable of projection. From cases of the permanent projection of elder minds arose many of those lasting changes of personality noticed in later history—including mankind's.

As for the ordinary cases of exploration—when the displacing mind had learned what it wished in the future, it would build an apparatus like that which had started its flight and reverse the process of projection. Once more it would be in its own body in its own age, while the lately captive mind would return to that body of the future to which it properly belonged.

Only when one or the other of the bodies had died during the exchange was this restoration impossible. In such cases, of course, the exploring mind had—like those of the death-escapers—to live out an alien-bodied life in the future; or else the captive mind—like the dying permanent exiles—had to end its days in the form and past age of the Great Race.

This fate was least horrible when the captive mind was also of the Great Race—a not infrequent occurrence, since in all its periods that race was intensely concerned with its own future. The number of dying

permanent exiles of the Great Race was very slight—largely because of the tremendous penalties attached to displacements of future Great Race minds by the moribund.

Through projection, arrangements were made to inflict these penalties on the offending minds in their new future bodies—and sometimes forced re-exchanges were effected.

Complex cases of the displacement of exploring or already captive minds by minds in various regions of the past had been known and carefully rectified. In every age since the discovery of mind projection, a minute but well-recognised element of the population consisted of Great Race minds from past ages, sojourning for a longer or shorter while.

When a captive mind of alien origin was returned to its own body in the future, it was purged by an intricate mechanical hypnosis of all it had learned in the Great Race's age—this because of certain troublesome consequences inherent in the general carrying forward of knowledge in large quantities.

The few existing instances of clear transmission had caused, and would cause at known future times, great disasters. And it was largely in consequence of two cases of this kind—said the old myths—that mankind had learned what it had concerning the Great Race.

Of all things surviving physically and directly from that aeon-distant

world, there remained only certain ruins of great stones in far places and under the sea, and parts of the text of the frightful Pnakotic Manuscripts.

Thus the returning mind reached its own age with only the faintest and most fragmentary visions of what it had undergone since its seizure. All memories that could be eradicated were eradicated, so that in most cases only a dream-shadowed blank stretched back to the time of the first exchange. Some minds recalled more than others, and the chance joining of memories had at rare times brought hints of the forbidden past to future ages.

There probably never was a time when groups or cults did not secretly cherish certain of these hints. In the *Necronomicon* the presence of such a cult among human beings was suggested—a cult that sometimes gave aid to minds voyaging down the aeons from the days of the Great Race.

And, meanwhile, the Great Race itself waxed well-nigh omniscient, and turned to the task of setting up exchanges with the minds of other planets, and of exploring their pasts and futures. It sought likewise to fathom the past years and origin of that black, aeon-dead orb in far space whence its own mental heritage had come—for the mind of the Great Race was older than its bodily form.

The beings of a dying elder world, wise with the ultimate secrets,

had looked ahead for a new world and species wherein they might have long life; and had sent their minds en masse into that future race best adapted to house them—the cone-shaped beings that peopled our earth a billion years ago.

Thus the Great Race came to be, while the myriad minds sent backward were left to die in the horror of strange shapes. Later the race would again face death, yet would live through another forward migration of its best minds into the bodies of others who had a longer physical span ahead of them.

Such was the background of intertwined legend and hallucination. When, around 1920, I had my researches in coherent shape, I felt a slight lessening of the tension which their earlier stages had increased. After all, and in spite of the fancies prompted by blind emotions, were not most of my phenomena readily explainable? Any chance might have turned my mind to dark studies during the amnesia—and then I read the forbidden legends and met the members of ancient and ill-regarded cults. That, plainly, supplied the material for the dreams and disturbed feelings which came after the return of memory.

As for the marginal notes in dream-hieroglyphs and languages unknown to me, but laid at my door by librarians—I might easily have

picked up a smattering of the tongues during my secondary state, while the hieroglyphs were doubtless coined by my fancy from descriptions in old legends, and afterward woven into my dreams. I tried to verify certain points through conversation with known cult leaders, but never succeeded in establishing the right connexions.

At times the parallelism of so many cases in so many distant ages continued to worry me as it had at first, but on the other hand I reflected that the excitant folklore was undoubtedly more universal in the past than in the present.

Probably all the other victims whose cases were like mine had had a long and familiar knowledge of the tales I had learned only when in my secondary state. When these victims had lost their memory, they had associated themselves with the creatures of their household myths—the fabulous invaders supposed to displace men's minds—and had thus embarked upon quests for knowledge which they thought they could take back to a fancied, non-human past.

Then, when their memory returned, they reversed the associative process and thought of themselves as the former captive minds instead of as the displacers. Hence the dreams and pseudo-memories following the conventional myth pattern.

Despite the seeming cumbrousness of these explanations, they came

finally to supersede all others in my mind—largely because of the greater weakness of any rival theory. And a substantial number of eminent psychologists and anthropologists gradually agreed with me.

The more I reflected, the more convincing did my reasoning seem; till in the end I had a really effective bulwark against the visions and impressions which still assailed me. Suppose I did see strange things at night? These were only what I had heard and read of. Suppose I did have odd loathings and perspectives and pseudo-memories? These, too, were only echoes of myths absorbed in my secondary state. Nothing that I might dream, nothing that I might feel, could be of any actual significance.

Fortified by this philosophy, I greatly improved in nervous equilibrium, even though the visions—rather than the abstract impressions—steadily became more frequent and more disturbingly detailed. In 1922 I felt able to undertake regular work again, and put my newly gained knowledge to practical use by accepting an instructorship in psychology at the university.

My old chair of political economy had long been adequately filled—besides which, methods of teaching economics had changed greatly since my heyday. My son was at this time just entering on the post-graduate studies leading to his present professorship, and we worked together a great deal.

IV.

I continued, however, to keep a careful record of the *outré* dreams which crowded upon me so thickly and vividly. Such a record, I argued, was of genuine value as a psychological document. The glimpses still seemed damnably like memories, though I fought off this impression with a goodly measure of success.

In writing, I treated the phantasmata as things seen; but at all other times I brushed them aside like any gossamer illusions of the night. I had never mentioned such matters in common conversation; though reports of them, filtering out as such things will, had aroused sundry rumors regarding my mental health. It is amusing to reflect that these rumors were confined wholly to laymen, without a single champion among physicians or psychologists.

Of my visions after 1914 I will here mention only a few, since fuller accounts and records are at the disposal of the serious student. It is evident that with time the curious inhibitions somewhat waned, for the scope of my visions vastly increased. They have never, though, become other than disjointed fragments seemingly without clear motivation.

Within the dreams I seemed gradually to acquire a greater and greater freedom of wandering. I floated through many strange

buildings of stone, going from one to the other along mammoth underground passages which seemed to form the common avenues of transit. Sometimes I encountered those gigantic sealed trap-doors in the lowest level, around which such an aura of fear and forbiddenness clung.

I saw tremendously tessellated pools, and rooms of curious and inexplicable utensils of myriad sorts. Then there were colossal caverns of intricate machinery whose outlines and purpose were wholly strange to me, and whose sound manifested itself only after many years of dreaming. I may here remark that sight and sound are the only senses I have ever exercised in the visionary world.

The real horror began in May, 1915, when I first saw the living things. This was before my studies had taught me what, in view of the myths and case histories, to expect. As mental barriers wore down, I beheld great masses of thin vapour in various parts of the building and in the streets below.

These steadily grew more solid and distinct, till at last I could trace their monstrous outlines with uncomfortable ease. They seemed to be enormous, iridescent cones, about ten feet high and ten feet wide at the base, and made up of some ridgy, scaly, semi-elastic matter. From their apexes projected four flexible, cylindrical members, each a foot thick, and of a ridgy substance like that of the cones themselves.

These members were sometimes contracted almost to nothing, and sometimes extended to any distance up to about ten feet. Terminating two of them were enormous claws or nippers. At the end of a third were four red, trumpetlike appendages. The fourth terminated in an irregular yellowish globe some two feet in diameter and having three great dark eyes ranged along its central circumference.

Surmounting this head were four slender grey stalks bearing flower-like appendages, whilst from its nether side dangled eight greenish antennae or tentacles. The great base of the central cone was fringed with a rubbery, grey substance which moved the whole entity through expansion and contraction.

Their actions, though harmless, horrified me even more than their appearance—for it is not wholesome to watch monstrous objects doing what one had known only human beings to do. These objects moved intelligently about the great rooms, getting books from the shelves and taking them to the great tables, or vice versa, and sometimes writing diligently with a peculiar rod gripped in the greenish head tentacles. The huge nippers were used in carrying books and in conversation—speech consisting of a kind of clicking and scraping.

The objects had no clothing, but wore satchels or knapsacks suspended from the top of the conical trunk. They commonly carried their head

and its supporting member at the level of the cone top, although it was frequently raised or lowered.

The other three great members tended to rest downward at the sides of the cone, contracted to about five feet each when not in use. From their rate of reading, writing, and operating their machines—those on the tables seemed somehow connected with thought—I concluded that their intelligence was enormously greater than man's.

Afterward I saw them everywhere; swarming in all the great chambers and corridors, tending monstrous machines in vaulted crypts, and racing along the vast roads in gigantic, boat-shaped cars. I ceased to be afraid of them, for they seemed to form supremely natural parts of their environment.

Individual differences amongst them began to be manifest, and a few appeared to be under some kind of restraint. These latter, though shewing no physical variation, had a diversity of gestures and habits which marked them off not only from the majority, but very largely from one another.

They wrote a great deal in what seemed to my cloudy vision a vast variety of characters—never the typical curvilinear hieroglyphs of the majority. A few, I fancied, used our own familiar alphabet. Most of them worked much more slowly than the general mass of the entities.

All this time my own part in the dreams seemed to be that of a

disembodied consciousness with a range of vision wider than the normal, floating freely about, yet confined to the ordinary avenues and speeds of travel. Not until August, 1915, did any suggestions of bodily existence begin to harass me. I say harass, because the first phase was a purely abstract, though infinitely terrible, association of my previously noted body loathing with the scenes of my visions.

For a while my chief concern during dreams was to avoid looking down at myself, and I recall how grateful I was for the total absence of large mirrors in the strange rooms. I was mightily troubled by the fact that I always saw the great tables—whose height could not be under ten feet—from a level not below that of their surfaces.

And then the morbid temptation to look down at myself became greater and greater, till one night I could not resist it. At first my downward glance revealed nothing whatever. A moment later I perceived that this was because my head lay at the end of a flexible neck of enormous length. Retracting this neck and gazing down very sharply, I saw the scaly, rugose, iridescent bulk of a vast cone ten feet tall and ten feet wide at the base. That was when I waked half of Arkham with my screaming as I plunged madly up from the abyss of sleep.

Only after weeks of hideous repetition did I grow half-reconciled to these visions of myself in monstrous

form. In the dreams I now moved bodily among the other unknown entities, reading terrible books from the endless shelves and writing for hours at the great tables with a stylus managed by the green tentacles that hung down from my head.

Snatches of what I read and wrote would linger in my memory. There were horrible annals of other worlds and other universes, and of stirrings of formless life outside of all universes. There were records of strange orders of beings which had peopled the world in forgotten pasts, and frightful chronicles of grotesque-bodied intelligences which would people it millions of years after the death of the last human being.

I learned of chapters in human history whose existence no scholar of today has ever suspected. Most of these writings were in the language of the hieroglyphs; which I studied in a queer way with the aid of droning machines, and which was evidently an agglutinative speech with root systems utterly unlike any found in human languages.

Other volumes were in other unknown tongues learned in the same queer way. A very few were in languages I knew. Extremely clever pictures, both inserted in the records and forming separate collections, aided me immensely. And all the time I seemed to be setting down a history of my own age in English. On waking, I could recall only minute and meaningless scraps of the unknown tongues which my

dream-self had mastered, though whole phrases of the history stayed with me.

I learned—even before my waking self had studied the parallel cases or the old myths from which the dreams doubtless sprang—that the entities around me were of the world's greatest race, which had conquered time and had sent exploring minds into every age. I knew, too, that I had been snatched from my age while another used my body in that age, and that a few of the other strange forms housed similarly captured minds. I seemed to talk, in some odd language of claw clickings, with exiled intellects from every corner of the solar system.

There was a mind from the planet we know as Venus, which would live incalculable epochs to come, and one from an outer moon of Jupiter six million years in the past. Of earthly minds there were some from the winged, star-headed, half-vegetable race of palaeogean Antarctica; one from the reptile people of fabled Valusia; three from the furry pre-human Hyperborean worshippers of Tsathoggua; one from the wholly abominable Tcho-Tchos; two from the arachnid denizens of earth's last age; five from the hardy coleopterous species immediately following mankind, to which the Great Race was some day to transfer its keenest minds en masse in the face of horrible peril; and several from different branches of humanity.

I talked with the mind of

Yiang-Li, a philosopher from the cruel empire of Tsan-Chan, which is to come in 5,000 A.D.; with that of a general of the greatheaded brown people who held South Africa in 50,000 B.C.; with that of a twelfth-century Florentine monk named Bartolomeo Corsi; with that of a king of Lomar who had ruled that terrible polar land one hundred thousand years before the squat, yellow Inutos came from the west to engulf it.

I talked with the mind of Nug-Soth, a magician of the dark conquerors of 16,000 A.D.; with that of a Roman named Titus Sempronius Blaesus, who had been a quaestor in Sulla's time; with that of Khephnes, an Egyptian of the 14th Dynasty, who told me the hideous secret of Nyarlathotep, with that of a priest of Atlantis' middle kingdom; with that of a Suffolk gentleman of Cromwell's day, James Woodville; with that of a court astronomer of pre-Inca Peru; with that of the Australian physicist Nevil Kingston-Brown, who will die in 2,518 A.D.; with that of an archimage of vanished Yhe in the Pacific; with that of Theodotides, a Greco-Bactrian official of 200 B.C.; with that of an aged Frenchman of Louis XIII's time named Pierre-Louis Montagny; with that of Crom-Ya, a Cimmerian chieftain of 15,000 B.C.; and with so many others that my brain cannot hold the shocking secrets and dizzying marvels I learned from them.

I awaked each morning in a fever, sometimes frantically trying to verify or discredit such information as fell within the range of modern human knowledge. Traditional facts took on new and doubtful aspects, and I marvelled at the dream-fancy which could invent such surprising addenda to history and science.

I shivered at the mysteries the past may conceal, and trembled at the menaces the future may bring forth. What was hinted in the speech of post-human entities of the fate of mankind produced such an effect on me that I will not set it down here.

After man there would be the mighty beetle civilisation, the bodies of whose members the cream of the Great Race would seize when the monstrous doom overtook the elder world. Later, as the earth's span closed, the transferred minds would again migrate through time and space—to another stopping-place in the bodies of the bulbous vegetable entities of Mercury. But there would be races after them, clinging pathetically to the cold planet and burrowing to its horror-filled core, before the utter end.

Meanwhile, in my dreams, I wrote endlessly in that history of my own age which I was preparing—half voluntarily and half through promises of increased library and travel opportunities—for the Great Race's central archives. The archives were in a colossal subterranean

structure near the city's center, which I came to know well through frequent labors and consultations. Meant to last as long as the race, and to withstand the fiercest of earth's convulsions, this titan repository surpassed all other buildings in the massive, mountain-like firmness of its construction.

The records, written or printed on great sheets of a curiously tenacious cellulose fabric, were bound into books that opened from the top, and were kept in individual cases of a strange, extremely light, rustless metal of greyish hue, decorated with mathematical designs and bearing the title in the Great Race's curvilinear hieroglyphs.

These cases were stored in tiers of rectangular vaults—like closed, locked shelves—wrought of the same rustless metal and fastened by knobs with intricate turnings. My own history was assigned a specific place in the vaults of the lowest or vertebrate level—the section devoted to the culture of mankind and of the furry and reptilian races immediately preceding it in terrestrial dominance.

But none of the dreams ever gave me a full picture of daily life. All were the merest misty, disconnected fragments, and it is certain that these fragments were not unfolded in their rightful sequence. I have, for example, a very imperfect idea of my own living arrangements in the dream-world; though I seem to have possessed a great stone room

of my own. My restrictions as a prisoner gradually disappeared, so that some of the visions included vivid travels over the mighty jungle roads, sojourns in strange cities, and explorations of some of the vast, dark, windowless ruins from which the Great Race shrank in curious fear. There were also long sea voyages in enormous, many-decked boats of incredible swiftness, and trips over wild regions in closed projectile-like airships lifted and moved by electrical repulsion.

Beyond the wide, warm ocean were other cities of the Great Race, and on one far continent I saw the crude villages of the black-snouted, winged creatures who would evolve as a dominant stock after the Great Race had sent its foremost minds into the future to escape the creeping horror. Flatness and exuberant green life were always the keynote of the scene. Hills were low and sparse, and usually displayed signs of volcanic forces.

Of the animals I saw, I could write volumes. All were wild; for the Great Race's mechanised culture had long since done away with domestic beasts, while food was wholly vegetable or synthetic. Clumsy reptiles of great bulk floundered in steaming morasses, fluttered in the heavy air, or spouted in the seas and lakes; and among these I fancied I could vaguely recognise lesser, archaic prototypes of many forms—dinosaurs, pterodactyls, ichthyosaurs, labyrinthodonts, plesiosaurs, and the

like—made familiar through palaeontology. Of birds or mammals there were none that I could discover.

The ground and swamps were constantly alive with snakes, lizards, and crocodiles while insects buzzed incessantly among the lush vegetation. And far out at sea, unspied and unknown monsters spouted mountainous columns of foam into the vaporous sky. Once I was taken under the ocean in a gigantic submarine vessel with searchlights, and glimpsed some living horrors of awesome magnitude. I saw also the ruins of incredible sunken cities, and the wealth of crinoid, brachiopod, coral, and ichthyic life which everywhere abounded.

Of the physiology, psychology, folkways, and detailed history of the Great Race my visions preserved but little information, and many of the scattered points I here set down were gleaned from my study of old legends and other cases rather than from my own dreaming.

For in time, of course, my reading and research caught up with and passed the dreams in many phases, so that certain dream-fragments were explained in advance and formed verifications of what I had learned. This consolingly established my belief that similar reading and research, accomplished by my secondary self, had formed the source of the whole terrible fabric of pseudomemories.

The period of my dreams, apparently, was one somewhat less than

150,000,000 years ago, when the Palaeozoic age was giving place to the Mesozoic. The bodies occupied by the Great Race represented no surviving—or even scientifically known—line of terrestrial evolution, but were of a peculiar, closely homogeneous, and highly specialised organic type inclining as much as to the vegetable as to the animal state.

Cell action was of an unique sort almost precluding fatigue, and wholly eliminating the need of sleep. Nourishment, assimilated through the red trumpet-like appendages on one of the great flexible limbs, was always semi-fluid and in many aspects wholly unlike the food of existing animals.

The beings had but two of the senses which we recognise—sight and hearing, the latter accomplished through the flower-like appendages on the grey stalks above their heads. Of other and incomprehensible senses—not, however, well utilizable by alien captive minds inhabiting their bodies—they possessed many. Their three eyes were so situated as to give them a range of vision wider than the normal. Their blood was a sort of deep-greenish ichor of great thickness.

They had no sex, but reproduced through seeds or spores which clustered on their bases and could be developed only under water. Great, shallow tanks were used for the growth of their young—which were, however, reared only in small numbers on account of the longevity

of individuals—four or five thousand years being the common life span.

Markedly defective individuals were quickly disposed of as soon as their defects were noticed. Disease and the approach of death were, in the absence of a sense of touch or of physical pain, recognised by purely visual symptoms.

The dead were incinerated with dignified ceremonies. Once in a while, as before mentioned, a keen mind would escape death by forward projection in time; but such cases were not numerous. When one did occur, the exiled mind from the future was treated with the utmost kindness till the dissolution of its unfamiliar tenement.

The Great Race seemed to form a single, loosely knit nation or league, with major institutions in common, though there were four definite divisions. The political and economic system of each unit was a sort of fascistic socialism, with major resources rationally distributed, and power delegated to a small governing board elected by the votes of all able to pass certain educational and psychological tests. Family organisation was not overstressed, though ties among persons of common descent were recognised, and the young were generally reared by their parents.

Resemblances to human attitudes and institutions were, of course, most marked in those fields where on the one hand highly abstract elements were concerned,

or where on the other hand there was a dominance of the basic, unspecialised urges common to all organic life. A few added likenesses came through conscious adoption as the Great Race probed the future and copied what it liked.

Industry, highly mechanised, demanded but little time from each citizen; and the abundant leisure was filled with intellectual and aesthetic activities of various sorts.

The sciences were carried to an unbelievable height of development, and art was a vital part of life, though at the period of my dreams it had passed its crest and meridian. Technology was enormously stimulated through the constant struggle to survive, and to keep in existence the physical fabric of great cities, imposed by the prodigious geologic upheavals of those primal days.

Crime was surprisingly scant, and was dealt with through highly efficient policing. Punishments ranged from privilege deprivation and imprisonment to death or major emotion wrenching, and were never administered without a careful study of the criminal's motivations.

Warfare, largely civil for the last few millennia though sometimes waged against reptilian or octopodic invaders, or against the winged, star-headed Old Ones who centered in the antarctic, was infrequent though infinitely devastating. An enormous army, using camera-like weapons which produced tremendous electrical effects, was kept on hand for

purposes seldom mentioned, but obviously connected with the ceaseless fear of the dark, windowless elder ruins and of the great sealed trap-doors in the lowest subterranean levels.

This fear of the basalt ruins and trap-doors was largely a matter of unspoken suggestion—or, at most, of furtive quasi-whispers. Everything specific which bore on it was significantly absent from such books as were on the common shelves. It was the one subject lying altogether under a taboo among the Great Race, and seemed to be connected alike with horrible bygone struggles, and with that future peril which would some day force the race to send its keener minds ahead en masse in time.

Imperfect and fragmentary as were the other things presented by dreams and legends, this matter was still more bafflingly shrouded. The vague old myths avoided it—or perhaps all allusions had for some reason been excised. And in the dreams of myself and others, the hints were peculiarly few. Members of the Great Race never intentionally referred to the matter, and what could be gleaned came only from some of the more sharply observant captive minds.

According to these scraps of information, the basis of the fear was a horrible elder race of half-polypous, utterly alien entities which had come through space from immeasurably distant universes and

had dominated the earth and three other solar planets about 600 million years ago. They were only partly material—as we understand matter—and their type of consciousness and media of perception differed widely from those of terrestrial organisms. For example, their senses did not include that of sight; their mental world being a strange, non-visual pattern of impressions.

They were, however, sufficiently material to use implements of normal matter when in cosmic areas containing it; and they required housing—albeit of a peculiar kind. Though their senses could penetrate all material barriers, their substance could not; and certain forms of electrical energy could wholly destroy them. They had the power of aerial motion, despite the absence of wings or any other visible means of levitation. Their minds were of such texture that no exchange with them could be effected by the Great Race.

When these things had come to the earth they had built mighty basalt cities of windowless towers, and had preyed horribly upon the beings they found. Thus it was when the minds of the Great Race sped across the void from that obscure, trans-galactic world known in the disturbing and debatable Eltdown Shards as Yith.

The newcomers, with the instruments they created, had found it easy to subdue the predatory entities and drive them down to those caverns of inner earth which they had already

joined to their abodes and begun to inhabit.

Then they had sealed the entrances and left them to their fate, afterward occupying most of their great cities and preserving certain important buildings for reasons connected more with superstition than with indifference, boldness, or scientific and historical zeal.

But as the aeons passed there came vague, evil signs that the elder things were growing strong and numerous in the inner world. There were sporadic irruptions of a particularly hideous character in certain small and remote cities of the Great Race, and in some of the deserted elder cities which the Great Race had not peopled—places where the paths to the gulfs below had not been properly sealed or guarded.

After that greater precautions were taken, and many of the paths were closed forever—though a few were left with sealed trap-doors for strategic use in fighting the elder things if ever they broke forth in unexpected places.

The irruptions of the elder things must have been shocking beyond all description, since they had permanently coloured the psychology of the Great Race. Such was the fixed mood of horror that the very aspect of the creatures was left unmentioned. At no time was I able to gain a clear hint of what they looked like.

There were veiled suggestions of a monstrous plasticity, and of

temporary lapses of visibility, while other fragmentary whispers referred to their control and military use of great winds. Singular whistling noises, and colossal footprints made up of five circular toe marks, seemed also to be associated with them.

It was evident that the coming doom so desperately feared by the Great Race—the doom that was one day to send millions of keen minds across the chasm of time to strange bodies in the safer future—had to do with a final successful irruption of the elder beings.

Mental projections down the ages had clearly foretold such a horror, and the Great Race had resolved that none who could escape should face it. That the foray would be a matter of vengeance, rather than an attempt to reoccupy the outer world, they knew from the planet's later history—for their projections shewed the coming and going of subsequent races untroubled by the monstrous entities.

Perhaps these entities had come to prefer earth's inner abysses to the variable, storm-ravaged surface, since light meant nothing to them. Perhaps, too, they were slowly weakening with the aeons. Indeed, it was known that they would be quite dead in the time of the post-human beetle race which the fleeing minds would tenant.

Meanwhile, the Great Race maintained its cautious vigilance, with potent weapons ceaselessly ready despite the horrified banishing

of the subject from common speech and visible records. And always the shadow of nameless fear hung about the sealed trap-doors and the dark, windowless elder towers.

V.

That is the world of which my dreams brought me dim, scattered echoes every night. I cannot hope to give any true idea of the horror and dread contained in such echoes, for it was upon a wholly intangible quality—the sharp sense of pseudo-memory—that such feelings mainly depended.

As I have said, my studies gradually gave me a defence against these feelings in the form of rational psychological explanations; and this saving influence was augmented by the subtle touch of accustomedness which comes with the passage of time. Yet in spite of everything the vague, creeping terror would return momentarily now and then. It did not, however, engulf me as it had before; and after 1922 I lived a very normal life of work and recreation.

In the course of years I began to feel that my experience—together with the kindred cases and the related folklore—ought to be definitely summarised and published for the benefit of serious students; hence I prepared a series of articles briefly covering the whole ground and illustrated with crude sketches of some of the shapes, scenes, decorative

motifs, and hieroglyphs remembered from the dreams.

These appeared at various times during 1928 and 1929 in the *Journal of the American Psychological Society*, but did not attract much attention. Meanwhile I continued to record my dreams with the minutest care, even though the growing stack of reports attained troublesomely vast proportions. On July 10, 1934, there was forwarded to me by the Psychological Society the letter which opened the culminating and most horrible phase of the whole mad ordeal. It was postmarked Pilbarra, Western Australia, and bore the signature of one whom I found, upon inquiry, to be a mining engineer of considerable prominence. Enclosed were some very curious snapshots. I will reproduce the text in its entirety, and no reader can fail to understand how tremendous an effect it and the photographs had upon me.

I was, for a time, almost stunned and incredulous; for although I had often thought that some basis of fact must underlie certain phases of the legends which had coloured my dreams, I was none the less unprepared for anything like a tangible survival from a lost world remote beyond all imagination. Most devastating of all were the photographs—for here, in cold, incontrovertible realism, there stood out against a background of sand certain worn-down, water-ridged, storm-weathered blocks of stone whose slightly

convex tops and slightly concave bottoms told their own story.

And when I studied them with a magnifying glass I could see all too plainly, amidst the batterings and pittings, the traces of those vast curvilinear designs and occasional hieroglyphs whose significance had become so hideous to me. But here is the letter, which speaks for itself.

49, Dampier St., Pilbarra, W.
Australia, May 18, 1934.

Prof. N. W. Peaslee,
c/o Am. Psychological Society,
30 E. 41st St., New York City,
U.S.A.

My Dear Sir:—

A recent conversation with Dr. E. M. Boyle of Perth, and some papers with your articles which he has just sent me, make it advisable for me to tell you about certain things I have seen in the Great Sandy Desert east of our gold field here. It would seem, in view of the peculiar legends about old cities with huge stonework and strange designs and hieroglyphs which you describe, that I have come upon something very important.

The blackfellows have always been full of talk about "great stones with marks on them," and seem to have a terrible fear of such things. They connect them in some way with their common racial legends about Buddai, the gigantic old man who lies asleep for ages underground with his head on his arm, and who will some day awake and eat up the world.

There are some very old and half-forgotten tales of enormous

underground huts of great stones, where passages lead down and down, and where horrible things have happened. The blackfellows claim that once some warriors, fleeing in battle, went down into one and never came back, but that frightful winds began to blow from the place soon after they went down. However, there usually isn't much in what these natives say.

But what I have to tell is more than this. Two years ago, when I was prospecting about 500 miles east in the desert, I came on a lot of queer pieces of dressed stone perhaps $3 \times 2 \times 2$ feet in size, and weathered and pitted to the very limit.

At first I couldn't find any of the marks the blackfellows told about, but when I looked close enough I could make out some deeply carved lines in spite of the weathering. There were peculiar curves, just like what the blackfellows had tried to describe. I imagine there must have been thirty or forty blocks, some nearly buried in the sand, and all within a circle perhaps a quarter of a mile in diameter.

When I saw some, I looked around closely for more, and made a careful reckoning of the place with my instruments. I also took pictures of ten or twelve of the most typical blocks, and will enclose the prints for you to see.

I turned my information and pictures over to the government at Perth, but they have done nothing about them.

Then I met Dr. Boyle, who had read your articles in the *Journal of the American Psychological Society*, and, in

time, happened to mention the stones. He was enormously interested, and became quite excited when I shewed him my snapshots, saying that the stones and the markings were just like those of the masonry you had dreamed about and seen described in legends.

He meant to write you, but was delayed. Meanwhile, he sent me most of the magazines with your articles, and I saw at once, from your drawings and descriptions, that my stones are certainly the kind you mean. You can appreciate this from the enclosed prints. Later on you will hear directly from Dr. Boyle.

Now I can understand how important all this will be to you. Without question we are faced with the remains of an unknown civilization older than any dreamed of before, and forming a basis for your legends.

As a mining engineer, I have some knowledge of geology, and can tell you that these blocks are so ancient they frighten me. They are mostly sandstone and granite, though one is almost certainly made of a queer sort of cement or concrete.

They bear evidence of water action, as if this part of the world had been submerged and come up again after long ages—all since those blocks were made and used. It is a matter of hundreds of thousands of years—or heaven knows how much more. I don't like to think about it.

In view of your previous diligent work in tracking down the legends and everything connected with them, I cannot doubt but that you will want to lead an expedition to the desert and

make some archaeological excavations. Both Dr. Boyle and I are prepared to cooperate in such work if you—or organizations known to you—can furnish the funds.

I can get together a dozen miners for the heavy digging—the blackfellows would be of no use, for I've found that they have an almost maniacal fear of this particular spot. Boyle and I are saying nothing to others, for you very obviously ought to have precedence in any discoveries or credit.

The place can be reached from Pilbarra in about four days by motor tractor—which we'd need for our apparatus. It is somewhat west and south of Warburton's path of 1873, and 100 miles southeast of Joanna Spring. We could float things up the De Grey River instead of starting from Pilbarra—but all that can be talked over later.

Roughly the stones lie at a point about 22° 3' 14" South Latitude, 125° 0' 39" East Longitude. The climate is tropical, and the desert conditions are trying.

I shall welcome further correspondence upon this subject, and am keenly eager to assist in any plan you may devise. After studying your articles I am deeply impressed with the profound significance of the whole matter. Dr. Boyle will write later. When rapid communication is needed, a cable to Perth can be relayed by wireless.

Hoping profoundly for an early message,

Believe me,

Most faithfully yours,

ROBERT B. F. MACKENZIE

Of the immediate aftermath of this letter, much can be learned from the press. My good fortune in securing the backing of Miskatonic University was great, and both Mr. Mackenzie and Dr. Boyle proved invaluable in arranging matters at the Australian end. We were not too specific with the public about our objects, since the whole matter would have lent itself unpleasantly to sensational and jocose treatment by the cheaper newspapers. As a result, printed reports were sparing; but enough appeared to tell of our quest for reported Australian ruins and to chronicle our various preparatory steps.

Professor William Dyer of the college's geology department—leader of the Miskatonic Antarctic Expedition Of 1930-31—Ferdinand C. Ashley of the department of ancient history, and Tyler M. Freeborn of the department of anthropology—together with my son Wingate—accompanied me.

My correspondent, Mackenzie, came to Arkham early in 1935 and assisted in our final preparations. He proved to be a tremendously competent and affable man of about fifty, admirably well-read, and deeply familiar with all the conditions of Australian travel.

He had tractors waiting at Pilbarra, and we chartered a tramp steamer sufficiently small to get up the river to that point. We were prepared to excavate in the most careful and scientific fashion, sifting

every particle of sand, and disturbing nothing which might seem to be in or near its original situation.

Sailing from Boston aboard the wheezy Lexington on March 28, 1935, we had a leisurely trip across the Atlantic and Mediterranean, through the Suez Canal, down the Red Sea, and across the Indian Ocean to our goal. I need not tell how the sight of the low, sandy West Australian coast depressed me, and how I detested the crude mining town and dreary gold fields where the tractors were given their last loads.

Dr. Boyle, who met us, proved to be elderly, pleasant, and intelligent—and his knowledge of psychology led him into many long discussions with my son and me.

Discomfort and expectancy were oddly mingled in most of us when at length our party of eighteen rattled forth over the arid leagues of sand and rock. On Friday, May 31st, we forded a branch of the De Grey and entered the realm of utter desolation. A certain positive terror grew on me as we advanced to this actual site of the elder world behind the legends—a terror, of course, abetted by the fact that my disturbing dreams and pseudo-memories still beset me with unabated force.

It was on Monday, June 3rd, that we saw the first of the half-buried blocks. I cannot describe the emotions with which I actually touched—in objective reality—a fragment of Cyclopean masonry in

every respect like the blocks in the walls of my dream-buildings. There was a distinct trace of carving—and my hands trembled as I recognised part of a curvilinear decorative scheme made hellish to me through years of tormenting nightmare and baffling research.

A month of digging brought a total of some 1250 blocks in varying stages of wear and disintegration. Most of these were carved megaliths with curved tops and bottoms. A minority were smaller, flatter, plain-surfaced, and square or octagonally cut-like those of the floors and pavements in my dreams—while a few were singularly massive and curved or slanted in such a manner as to suggest use in vaulting or groining, or as parts of arches or round window casings.

The deeper—and the farther north and east—we dug, the more blocks we found; though we still failed to discover any trace of arrangement among them. Professor Dyer was appalled at the measureless age of the fragments, and Freeborn found traces of symbols which fitted darkly into certain Papuan and Polynesian legends of infinite antiquity. The condition and scattering of the blocks told mutely of vertiginous cycles of time and geologic upheavals of cosmic savagery.

We had an aëroplane with us, and my son Wingate would often go up to different heights and scan the sand-and-rock waste for signs of dim, large-scale outlines—either

differences of level or trails of scattered blocks. His results were virtually negative; for whenever he would one day think he had glimpsed some significant trend, he would on his next trip find the impression replaced by another equally insubstantial—a result of the shifting, wind-blown sand.

One or two of these ephemeral suggestions, though, affected me queerly and disagreeably. They seemed, after a fashion, to dovetail horribly with something I had dreamed or read, but which I could no longer remember. There was a terrible familiarity about them—which somehow made me look furtively and apprehensively over the abominable, sterile terrain toward the north and northeast.

Around the first week in July I developed an unaccountable set of mixed emotions about that general northeasterly region. There was horror, and there was curiosity—but more than that, there was a persistent and perplexing illusion of memory.

I tried all sorts of psychological expedients to get these notions out of my head, but met with no success. Sleeplessness also gained upon me, but I almost welcomed this because of the resultant shortening of my dream-periods. I acquired the habit of taking long, lone walks in the desert late at night—usually to the north or northeast, whither the sum of my strange new impulses seemed subtly to pull me.

Sometimes, on these walks, I

would stumble over nearly buried fragments of the ancient masonry. Though there were fewer visible blocks here than where we had started, I felt sure that there must be a vast abundance beneath the surface. The ground was less level than at our camp, and the prevailing high winds now and then piled the sand into fantastic temporary hillocks—exposing low traces of the elder stones while it covered other traces.

I was queerly anxious to have the excavations extend to this territory, yet at the same time dreaded what might be revealed. Obviously, I was getting into a rather bad state—all the worse because I could not account for it.

An indication of my poor nervous health can be gained from my response to an odd discovery which I made on one of my nocturnal rambles. It was on the evening of July 11th, when the moon flooded the mysterious hillocks with a curious pallor.

Wandering somewhat beyond my usual limits, I came upon a great stone which seemed to differ markedly from any we had yet encountered. It was almost wholly covered, but I stooped and cleared away the sand with my hands, later studying the object carefully and supplementing the moonlight with my electric torch.

Unlike the other very large rocks, this one was perfectly square-cut, with no convex or concave surface. It seemed, too, to be of a dark basaltic

substance, wholly dissimilar to the granite and sandstone and occasional concrete of the now familiar fragments.

Suddenly I rose, turned, and ran for the camp at top speed. It was a wholly unconscious and irrational flight, and only when I was close to my tent did I fully realise why I had run. Then it came to me. The queer dark stone was something which I had dreamed and read about, and which was linked with the uttermost horrors of the aeon-old legendry.

It was one of the blocks of that basaltic elder masonry which the fabled Great Race held in such fear—the tall, windowless ruins left by those brooding, half-material, alien things that festered in earth's nether abysses and against whose wind-like, invisible forces the trap-doors were sealed and the sleepless sentinels posted.

I remained awake all night, but by dawn realised how silly I had been to let the shadow of a myth upset me. Instead of being frightened, I should have had a discoverer's enthusiasm.

The next forenoon I told the others about my find, and Dyer, Freeborn, Boyle, my son, and I set out to view the anomalous block. Failure, however, confronted us. I had formed no clear idea of the stone's location, and a late wind had wholly altered the hillocks of shifting sand.

VI.

I come now to the crucial and most difficult part of my narrative—all the more difficult because I cannot be quite certain of its reality. At times I feel uncomfortably sure that I was not dreaming or deluded; and it is this feeling in view of the stupendous implications which the objective truth of my experience would raise—which impels me to make this record.

My son—a trained psychologist with the fullest and most sympathetic knowledge of my whole case—shall be the primary judge of what I have to tell.

First let me outline the externals of the matter, as those at the camp know them. On the night of July 17-18, after a windy day, I retired early but could not sleep. Rising shortly before eleven, and afflicted as usual with that strange feeling regarding the northeastward terrain, I set out on one of my typical nocturnal walks; seeing and greeting only one person—an Australian miner named Tupper—as I left our precincts.

The moon, slightly past full, shone from a clear sky, and drenched the ancient sands with a white, leprous radiance which seemed to me somehow infinitely evil. There was no longer any wind, nor did any return for nearly five hours, as amply attested by Tupper and others who saw me walking rapidly across the

pallid, secret-guarding hillocks toward the northeast.

About 3:30 a.m. a violent wind blew up, waking everyone in camp and felling three of the tents. The sky was unclouded, and the desert still blazed with that leprous moonlight. As the party saw to the tents my absence was noted, but in view of my previous walks this circumstance gave no one alarm. And yet, as many as three men—all Australians—seemed to feel something sinister in the air.

Mackenzie explained to Professor Freeborn that this was a fear picked up from blackfellow folklore—the natives having woven a curious fabric of malignant myth about the high winds which at long intervals sweep across the sands under a clear sky. Such winds, it is whispered, blow out of the great stone huts under the ground, where terrible things have happened—and are never felt except near places where the big marked stones are scattered. Close to four the gale subsided as suddenly as it had begun, leaving the sand hills in new and unfamiliar shapes.

It was just past five, with the bloated, fungoid moon sinking in the west, when I staggered into camp—hatless, tattered, features scratched and ensanguined, and without my electric torch. Most of the men had returned to bed, but Professor Dyer was smoking a pipe in front of his tent. Seeing my winded and almost frenzied state,

he called Dr. Boyle, and the two of them got me on my cot and made me comfortable. My son, roused by the stir, soon joined them, and they all tried to force me to lie still and attempt sleep.

But there was no sleep for me. My psychological state was very extraordinary—different from anything I had previously suffered. After a time I insisted upon talking—nervously and elaborately explaining my condition. I told them I had become fatigued, and had lain down in the sand for a nap. There had, I said, been dreams even more frightful than usual—and when I was awaked by the sudden high wind my overwrought nerves had snapped. I had fled in panic, frequently falling over half-buried stones and thus gaining my tattered and bedraggled aspect. I must have slept long—hence the hours of my absence.

Of anything strange either seen or experienced I hinted absolutely nothing—exercising the greatest self-control in that respect. But I spoke of a change of mind regarding the whole work of the expedition, and urged a halt in all digging toward the northeast. My reasoning was patently weak—for I mentioned a dearth of blocks, a wish not to offend the superstitious miners, a possible shortage of funds from the college, and other things either untrue or irrelevant. Naturally, no one paid the least attention to my new wishes—not even my son, whose concern for my health was obvious.

The next day I was up and around the camp, but took no part in the excavations. Seeing that I could not stop the work, I decided to return home as soon as possible for the sake of my nerves, and made my son promise to fly me in the plane to Perth—a thousand miles to the southwest—as soon as he had surveyed the region I wished let alone.

If, I reflected, the thing I had seen was still visible, I might decide to attempt a specific warning even at the cost of ridicule. It was just conceivable that the miners who knew the local folklore might back me up. Humouring me, my son made the survey that very afternoon, flying over all the terrain my walk could possibly have covered. Yet nothing of what I had found remained in sight.

It was the case of the anomalous basalt block all over again—the shifting sand had wiped out every trace. For an instant I half regretted having lost a certain awesome object in my stark fright—but now I know that the loss was merciful. I can still believe my whole experience an illusion—especially if, as I devoutly hope, that hellish abyss is never found.

Wingate took me to Perth on July 20th, though declining to abandon the expedition and return home. He stayed with me until the 25th, when the steamer for Liverpool sailed. Now, in the cabin of the *Empress*, I am pondering long and

frantically upon the entire matter, and have decided that my son at least must be informed. It shall rest with him whether to diffuse the matter more widely.

In order to meet any eventuality I have prepared this summary of my background—as already known in a scattered way to others—and will now tell as briefly as possible what seemed to happen during my absence from the camp that hideous night.

Nerves on edge, and whipped into a kind of perverse eagerness by that inexplicable, dread-mingled, mnemonic urge toward the northeast, I plodded on beneath the evil, burning moon. Here and there I saw, half shrouded by sand, those primal Cyclopean blocks left from nameless and forgotten aeons.

The incalculable age and brooding horror of this monstrous waste began to oppress me as never before, and I could not keep from thinking of my maddening dreams, of the frightful legends which lay behind them, and of the present fears of natives and miners concerning the desert and its carven stones.

And yet I plodded on as if to some eldritch rendezvous—more and more assailed by bewildering fancies, compulsions, and pseudo-memories. I thought of some of the possible contours of the lines of stones as seen by my son from the air, and wondered why they seemed at once so ominous and so familiar. Something was fumbling and rattling at the latch of my

recollection, while another unknown force sought to keep the portal barred.

The night was windless, and the pallid sand curved upward and downward like frozen waves of the sea. I had no goal, but somehow ploughed along as if with fate-bound assurance. My dreams welled up into the waking world, so that each sand-embedded megalith seemed part of endless rooms and corridors of pre-human masonry, carved and hieroglyphed with symbols that I knew too well from years of custom as a captive mind of the Great Race.

At moments I fancied I saw those omniscient, conical horrors moving about at their accustomed tasks, and I feared to look down lest I find myself one with them in aspect. Yet all the while I saw the sand-covered blocks as well as the rooms and corridors; the evil, burning moon as well as the lamps of luminous crystal; the endless desert as well as the waving ferns beyond the windows. I was awake and dreaming at the same time.

I do not know how long or how far—or indeed, in just what direction—I had walked when I first spied the heap of blocks bared by the day's wind. It was the largest group in one place that I had seen so far, and so sharply did it impress me that the visions of fabulous aeons faded suddenly away.

Again there were only the desert and the evil moon and the shards of an unguessed past. I drew close and

paused, and cast the added light of my electric torch over the tumbled pile. A hillock had blown away, leaving a low, irregularly round mass of megaliths and smaller fragments some forty feet across and from two to eight feet high.

From the very outset I realized that there was some utterly unprecedented quality about those stones. Not only was the mere number of them quite without parallel, but something in the sandworn traces of design arrested me as I scanned them under the mingled beams of the moon and my torch.

Not that any one differed essentially from the earlier specimens we had found. It was something subtler than that. The impression did not come when I looked at one block alone, but only when I ran my eye over several almost simultaneously.

Then, at last, the truth dawned upon me. The curvilinear patterns on many of those blocks were closely related—parts of one vast decorative conception. For the first time in this aeon-shaken waste I had come upon a mass of masonry in its old position—tumbled and fragmentary, it is true, but none the less existing in a very definite sense.

Mounting at a low place, I clambered laboriously over the heap; here and there clearing away the sand with my fingers, and constantly striving to interpret varieties of size, shape, and style, and relationships of design.

After a while I could vaguely

guess at the nature of the bygone structure, and at the designs which had once stretched over the vast surfaces of the primal masonry. The perfect identity of the whole with some of my dream-glimpses appalled and unnerved me.

This was once a Cyclopean corridor thirty feet tall, paved with octagonal blocks and solidly vaulted overhead. There would have been rooms opening off on the right, and at the farther end one of those strange inclined planes would have wound down to still lower depths.

I started violently as these conceptions occurred to me, for there was more in them than the blocks themselves had supplied. How did I know that this level should have been far underground? How did I know that the plane leading upward should have been behind me? How did I know that the long subterranean passage to the Square of Pillars ought to lie on the left one level above me?

How did I know that the room of machines and the rightward-leading tunnel to the central archives ought to lie two levels below? How did I know that there would be one of those horrible, metal-banded trap-doors at the very bottom four levels down? Bewildered by this intrusion from the dream-world, I found myself shaking and bathed in a cold perspiration.

Then, as a last, intolerable touch, I felt that faint, insidious stream of cool air trickling upward from a

depressed place near the center of the huge heap. Instantly, as once before, my visions faded, and I saw again only the evil moonlight, the brooding desert, and the spreading tumulus of palaeogean masonry. Something real and tangible, yet fraught with infinite suggestions of nighted mystery, now confronted me. For that stream of air could argue but one thing—a hidden gulf of great size beneath the disordered blocks on the surface.

My first thought was of the sinister blackfellow legends of vast underground huts among the megaliths where horrors happen and great winds are born. Then thoughts of my own dreams came back, and I felt dim pseudo-memories tugging at my mind. What manner of place lay below me? What primal, inconceivable source of age-old myth-cycles and haunting nightmares might I be on the brink of uncovering?

It was only for a moment that I hesitated, for more than curiosity and scientific zeal was driving me on and working against my growing fear.

I seemed to move almost automatically, as if in the clutch of some compelling fate. Pocketing my torch, and struggling with a strength that I had not thought I possessed, I wrenched aside first one titan fragment of stone and then another, till there welled up a strong draught whose dampness contrasted oddly with the desert's dry air. A black rift began to yawn, and at length—when

I had pushed away every fragment small enough to budge—the leprous moonlight blazed on an aperture of ample width to admit me.

I drew out my torch and cast a brilliant beam into the opening. Below me was a chaos of tumbled masonry, sloping roughly down toward the north at an angle of about forty-five degrees, and evidently the result of some bygone collapse from above.

Between its surface and the ground level was a gulf of impenetrable blackness at whose upper edge were signs of gigantic, stress-heaved vaulting. At this point, it appeared, the desert's sands lay directly upon a floor of some titan structure of earth's youth—how preserved through aeons of geologic convulsion I could not then and cannot now even attempt to guess.

In retrospect, the barest idea of a sudden, lone descent into such a doubtful abyss—and at a time when one's whereabouts were unknown to any living soul—seems like the utter apex of insanity. Perhaps it was—yet that night I embarked without hesitancy upon such a descent.

Again there was manifest that lure and driving of fatality which had all along seemed to direct my course. With torch flashing intermittently to save the battery, I commenced a mad scramble down the sinister, Cyclopean incline below the opening—sometimes facing forward as I found good hand- and foot-holds, and at other times

turning to face the heap of megaliths as I clung and fumbled more precariously.

In two directions beside me distant walls of carven, crumbling masonry loomed dimly under the direct beams of my torch. Ahead, however, was only unbroken darkness.

I kept no track of time during my downward scramble. So seething with baffling hints and images was my mind that all objective matters seemed withdrawn into incalculable distances. Physical sensation was dead, and even fear remained as a wraith-like, inactive gargoyle leering impotently at me.

Eventually, I reached a level floor strewn with fallen blocks, shapeless fragments of stone, and sand and detritus of every kind. On either side—perhaps thirty feet apart—rose massive walls culminating in huge groinings. That they were carved I could just discern, but the nature of the carvings was beyond my perception.

What held me the most was the vaulting overhead. The beam from my torch could not reach the roof, but the lower parts of the monstrous arches stood out distinctly. And so perfect was their identity with what I had seen in countless dreams of the elder world, that I trembled actively for the first time.

Behind and high above, a faint luminous blur told of the distant moonlit world outside. Some vague shred of caution warned me that I

should not let it out of my sight, lest I have no guide for my return.

I now advanced toward the wall at my left, where the traces of carving were plainest. The littered floor was nearly as hard to traverse as the downward heap had been, but I managed to pick my difficult way.

At one place I heaved aside some blocks and brushed away the detritus to see what the pavement was like, and shuddered at the utter, fateful familiarity of the great octagonal stones whose buckled surface still held roughly together.

Reaching a convenient distance from the wall, I cast the searchlight slowly and carefully over its worn remnants of carving. Some bygone influx of water seemed to have acted on the sandstone surface, while there were curious incrustations which I could not explain.

In places the masonry was very loose and distorted, and I wondered how many aeons more this primal, hidden edifice could keep its remaining traces of form amidst earth's heavings.

But it was the carvings themselves that excited me most. Despite their time-crumbled state, they were relatively easy to trace at close range; and the complete, intimate familiarity of every detail almost stunned my imagination.

That the major attributes of this hoary masonry should be familiar, was not beyond normal credibility.

Powerfully impressing the weavers of certain myths, they had

become embodied in a stream of cryptic lore which, somehow, coming to my notice during the amnesic period, had evoked vivid images in my subconscious mind.

But how could I explain the exact and minute fashion in which each line and spiral of these strange designs tallied with what I had dreamed for more than a score of years? What obscure, forgotten iconography could have reproduced each subtle shading and nuance which so persistently, exactly, and unvaryingly besieged my sleeping vision night after night?

For this was no chance or remote resemblance. Definitely and absolutely, the millennially ancient, aeon-hidden corridor in which I stood was the original of something I knew in sleep as intimately as I knew my own house in Crane Street, Arkham. True, my dreams shewed the place in its undecayed prime; but the identity was no less real on that account. I was wholly and horribly oriented.

The particular structure I was in was known to me. Known, too, was its place in that terrible elder city of dreams. That I could visit unerringly any point in that structure or in that city which had escaped the changes and devastations of uncounted ages, I realized with hideous and instinctive certainty. What in heaven's name could all this mean? How had I come to know what I knew? And what awful reality could lie

behind those antique tales of the beings who had dwelt in this labyrinth of primordial stone?

Words can convey only fractionally the welter of dread and bewilderment which ate at my spirit. I knew this place. I knew what lay before me, and what had lain overhead before the myriad towering stories had fallen to dust and debris and the desert. No need now, I thought with a shudder, to keep that faint blur of moonlight in view.

I was torn betwixt a longing to flee and a feverish mixture of burning curiosity and driving fatality. What had happened to this monstrous megalopolis of old in the millions of years since the time of my dreams? Of the subterrene mazes which had underlain the city and linked all the titan towers, how much had still survived the writhings of earth's crust?

Had I come upon a whole buried world of unholy archaism? Could I still find the house of the writing master, and the tower where S'gg'ha, the captive mind from the star-headed vegetable carnivores of Antarctica, had chiselled certain pictures on the blank spaces of the walls?

Would the passage at the second level down, to the hall of the alien minds, be still unchoked and traversable? In that hall the captive mind of an incredible entity—a half-plastic denizen of the hollow interior of an unknown trans-Plutonian planet eighteen million years in the

future—had kept a certain thing which it had modelled from clay.

I shut my eyes and put my hand to my head in a vain, pitiful effort to drive these insane dream-fragments from my consciousness. Then, for the first time, I felt acutely the coolness, motion, and dampness of the surrounding air. Shuddering, I realized that a vast chain of aeon-dead black gulfs must indeed be yawning somewhere beyond and below me.

I thought of the frightful chambers and corridors and inclines as I recalled them from my dreams. Would the way to the central archives still be open? Again that driving fatality tugged insistently at my brain as I recalled the awesome records that once lay cased in those rectangular vaults of rustless metal.

There, said the dreams and legends, had reposed the whole history, past and future, of the cosmic space-time continuum—written by captive minds from every orb and every age in the solar system. Madness, of course—but had I not now stumbled into a nighted world as mad as I?

I thought of the locked metal shelves, and of the curious knob twistings needed to open each one. My own came vividly into my consciousness. How often had I gone through that intricate routine of varied turns and pressures in the terrestrial vertebrate section on the lowest level! Every detail was fresh and familiar.

If there were such a vault as I had dreamed of, I could open it in a moment. It was then that madness took me utterly. An instant later, and I was leaping and stumbling over the rocky debris toward the well-remembered incline to the depths below.

VII.

From that point forward my impressions are scarcely to be relied on—indeed, I still possess a final, desperate hope that they all form parts of some daemonic dream or illusion born of delirium. A fever raged in my brain, and everything came to me through a kind of haze—sometimes only intermittently.

The rays of my torch shot feebly into the engulfing blackness, bringing phantasmal flashes of hideously familiar walls and carvings, all blighted with the decay of ages. In one place a tremendous mass of vaulting had fallen, so that I had to clamber over a mighty mound of stones reaching almost to the ragged, grotesquely stalactited roof.

It was all the ultimate apex of nightmare, made worse by the blasphemous tug of pseudo-memory. One thing only was unfamiliar, and that was my own size in relation to the monstrous masonry. I felt oppressed by a sense of unwonted smallness, as if the sight of these towering walls from a mere human body was something wholly new and abnormal. Again and again I looked

nervously down at myself, vaguely disturbed by the human form I possessed.

Onward through the blackness of the abyss I leaped, plunged, and staggered—often falling and bruising myself, and once nearly shattering my torch. Every stone and corner of that daemonic gulf was known to me, and at many points I stopped to cast beams of light through choked and crumbling, yet familiar, archways.

Some rooms had totally collapsed; others were bare, or debris-filled. In a few I saw masses of metal—some fairly intact, some broken, and some crushed or battered—which I recognised as the colossal pedestals or tables of my dreams. What they could in truth have been, I dared not guess.

I found the downward incline and began its descent—though after a time halted by a gaping, ragged chasm whose narrowest point could not be much less than four feet across. Here the stonework had fallen through, revealing incalculable inky depths beneath.

I knew there were two more cellar levels in this titan edifice, and trembled with fresh panic as I recalled the metal-clamped trap-door on the lowest one. There could be no guards now—for what had lurked beneath had long since done its hideous work and sunk into its long decline. By the time of the post-human beetle race it would be quite dead. And yet, as I thought of the

native legends, I trembled anew.

It cost me a terrible effort to vault that yawning chasm, since the littered floor prevented a running start—but madness drove me on. I chose a place close to the left-hand wall—where the rift was least wide and the landing-spot reasonably clear of dangerous debris—and after one frantic moment reached the other side in safety.

At last, gaining the lower level, I stumbled on past the archway of the room of machines, within which were fantastic ruins of metal, half buried beneath fallen vaulting. Everything was where I knew it would be, and I climbed confidently over the heaps which barred the entrance of a vast transverse corridor. This, I realised, would take me under the city to the central archives.

Endless ages seemed to unroll as I stumbled, leaped, and crawled along that debris-cluttered corridor. Now and then I could make out carvings on the ages-stained walls—some familiar, others seemingly added since the period of my dreams. Since this was a subterranean house-connecting highway, there were no archways save when the route led through the lower levels of various buildings.

At some of these intersections I turned aside long enough to look down well-remembered corridors and into well-remembered rooms. Twice only did I find any radical changes from what I had dreamed of—and in one of these cases I could

trace the sealed-up outlines of the archway I remembered.

I shook violently, and felt a curious surge of retarding weakness, as I steered a hurried and reluctant course through the crypt of one of those great windowless, ruined towers whose alien, basalt masonry bespoke a whispered and horrible origin.

This primal vault was round and fully two hundred feet across, with nothing carved upon the dark-hued stonework. The floor was here free from anything save dust and sand, and I could see the apertures leading upward and downward. There were no stairs or inclines—indeed, my dreams had pictured those elder towers as wholly untouched by the fabulous Great Race. Those who had built them had not needed stairs or inclines.

In the dreams, the downward aperture had been tightly sealed and nervously guarded. Now it lay open—black and yawning, and giving forth a current of cool, damp air. Of what limitless caverns of eternal night might brood below, I would not permit myself to think.

Later, clawing my way along a badly heaped section of the corridor, I reached a place where the roof had wholly caved in. The debris rose like a mountain, and I climbed up over it, passing through a vast, empty space where my torchlight could reveal neither walls nor vaulting. This, I reflected, must be the cellar of the house of the metal-purveyors,

fronting on the third square not far from the archives. What had happened to it I could not conjecture.

I found the corridor again beyond the mountain of detritus and stone, but after a short distance encountered a wholly choked place where the fallen vaulting almost touched the perilously sagging ceiling. How I managed to wrench and tear aside enough blocks to afford a passage, and how I dared disturb the tightly packed fragments when the least shift of equilibrium might have brought down all the tons of superincumbent masonry to crush me to nothingness, I do not know.

It was sheer madness that impelled and guided me—if, indeed, my whole underground adventure was not—as I hope—a hellish delusion or phase of dreaming. But I did make—or dream that I made—a passage that I could squirm through. As I wiggled over the mound of debris—my torch, switched continuously on, thrust deeply in my mouth—I felt myself torn by the fantastic stalactites of the jagged floor above me.

I was now close to the great underground archival structure which seemed to form my goal. Sliding and clambering down the farther side of the barrier, and picking my way along the remaining stretch of corridor with hand-held, intermittently flashing torch, I came at last to a low, circular crypt with arches—still in a marvelous state of preservation—

opening off on every side.

The walls, or such parts of them as lay within reach of my torchlight, were densely hieroglyphed and chiselled with typical curvilinear symbols—some added since the period of my dreams.

This, I realised, was my fated destination, and I turned at once through a familiar archway on my left. That I could find a clear passage up and down the incline to all the surviving levels, I had, oddly, little doubt. This vast, earth-protected pile, housing the annals of all the solar system, had been built with supernal skill and strength to last as long as that system itself.

Blocks of stupendous size, poised with mathematical genius and bound with cements of incredible toughness, had combined to form a mass as firm as the planet's rocky core. Here, after ages more prodigious than I could sanely grasp, its buried bulk stood in all its essential contours, the vast, dust-drifted floors scarce sprinkled with the litter elsewhere so dominant.

The relatively easy walking from this point onward went curiously to my head. All the frantic eagerness hitherto frustrated by obstacles now took itself out in a kind of febrile speed, and I literally raced along the low-roofed, monstrously well-remembered aisles beyond the archway.

I was past being astonished by the familiarity of what I saw. On every hand the great hieroglyphed metal shelf-doors loomed

monstrously; some yet in place, others sprung open, and still others bent and buckled under bygone geological stresses not quite strong enough to shatter the titan masonry.

Here and there a dust-covered heap beneath a gaping, empty shelf seemed to indicate where cases had been shaken down by earth tremors. On occasional pillars were great symbols or letters proclaiming classes and subclasses of volumes.

Once I paused before an open vault where I saw some of the accustomed metal cases still in position amidst the omnipresent gritty dust. Reaching up, I dislodged one of the thinner specimens with some difficulty, and rested it on the floor for inspection. It was titled in the prevailing curvilinear hieroglyphs, though something in the arrangement of the characters seemed subtly unusual.

The odd mechanism of the hooked fastener was perfectly well known to me, and I snapped up the still rustless and workable lid and drew out the book within. The latter, as expected, was some twenty by fifteen inches in area, and two inches thick; the thin metal covers opening at the top.

Its tough cellulose pages seemed unaffected by the myriad cycles of time they had lived through, and I studied the queerly pigmented, brush-drawn letters of the text-symbols unlike either the usual curved hieroglyphs or any alphabet known to human scholarship—with a

haunting, half-aroused memory.

It came to me that this was the language used by a captive mind I had known slightly in my dreams—a mind from a large asteroid on which had survived much of the archaic life and lore of the primal planet whereof it formed a fragment. At the same time I recalled that this level of the archives was devoted to volumes dealing with the non-terrestrial planets.

As I ceased poring over this incredible document I saw that the light of my torch was beginning to fail, hence quickly inserted the extra battery I always had with me. Then, armed with the stronger radiance, I resumed my feverish racing through unending tangles of aisles and corridors—recognising now and then some familiar shelf, and vaguely annoyed by the acoustic conditions which made my footfalls echo incongruously in these catacombs.

The very prints of my shoes behind me in the millennially untrodden dust made me shudder. Never before, if my mad dreams held anything of truth, had human feet pressed upon those immemorial pavements.

Of the particular goal of my insane racing, my conscious mind held no hint. There was, however, some force of evil potency pulling at my dazed will and buried recollection, so that I vaguely felt I was not running at random.

I came to a downward incline and followed it to profounder depths.

Floors flashed by me as I raced, but I did not pause to explore them. In my whirling brain there had begun to beat a certain rhythm which set my right hand twitching in unison. I wanted to unlock something, and felt that I knew all the intricate twists and pressures needed to do it. It would be like a modern safe with a combination lock.

Dream or not, I had once known and still knew. How any dream—or scrap of unconsciously absorbed legend—could have taught me a detail so minute, so intricate, and so complex, I did not attempt to explain to myself. I was beyond all coherent thought. For was not this whole experience—this shocking familiarity with a set of unknown ruins, and this monstrously exact identity of everything before me with what only dreams and scraps of myth could have suggested—a horror beyond all reason?

Probably it was my basic conviction then—as it is now during my saner moments—that I was not awake at all, and that the entire buried city was a fragment of febrile hallucination.

Eventually, I reached the lowest level and struck off to the right of the incline. For some shadowy reason I tried to soften my steps, even though I lost speed thereby. There was a space I was afraid to cross on this last, deeply buried floor.

As I drew near it I recalled what thing in that space I feared. It was merely one of the metal-barred and

closely guarded trap-doors. There would be no guards now, and on that account I trembled and tiptoed as I had done in passing through that black basalt vault where a similar trap-door had yawned.

I felt a current of cool, damp air as I had felt there, and wished that my course led in another direction. Why I had to take the particular course I was taking, I did not know.

When I came to the space I saw that the trap-door yawned widely open. Ahead, the shelves began again, and I glimpsed on the floor before one of them a heap very thinly covered with dust, where a number of cases had recently fallen. At the same moment a fresh wave of panic clutched me, though for some time I could not discover why.

Heaps of fallen cases were not uncommon, for all through the aeons this lightless labyrinth had been racked by the heavings of earth and had echoed at intervals of the deafening clatter of toppling objects. It was only when I was nearly across the space that I realized why I shook so violently.

Not the heap, but something about the dust of the level floor was troubling me. In the light of my torch it seemed as if that dust were not as even as it ought to be—there were places where it looked thinner, as if it had been disturbed not many months before. I could not be sure, for even the apparently thinner places were dusty enough; yet a certain suspicion of regularity in the

fancied unevenness was highly disquieting.

When I brought the torchlight close to one of the queer places I did not like what I saw—for the illusion of regularity became very great. It was as if there were regular lines of composite impressions—impressions that went in threes, each slightly over a foot square, and consisting of five nearly circular three-inch prints, one in advance of the other four.

These possible lines of foot-square impressions appeared to lead in two directions, as if something had gone somewhere and returned. They were, of course, very faint, and may have been illusions or accidents; but there was an element of dim, fumbling terror about the way I thought they ran. For at one end of them was the heap of cases which must have clattered down not long before, while at the other end was the ominous trap-door with the cool, damp wind, yawning unguarded down to abysses past imagination.

VIII.

That my strange sense of compulsion was deep and overwhelming is shewn by its conquest of my fear. No rational motive could have drawn me on after that hideous suspicion of prints and the creeping dream-memories it excited. Yet my right hand, even as it shook with fright, still twitched rhythmically

in its eagerness to turn a lock it hoped to find. Before I knew it I was past the heap of lately fallen cases and running on tiptoe through aisles of utterly unbroken dust toward a point which I seemed to know morbidly, horribly well.

My mind was asking itself questions whose origin and relevancy I was only beginning to guess. Would the shelf be reachable by a human body? Could my human hand master all the aeon-remembered motions of the lock? Would the lock be undamaged and workable? And what would I do—what dare I do with what—as I now commenced to realise—I both hoped and feared to find? Would it prove the awesome, brain-shattering truth of something past normal conception, or shew only that I was dreaming?

The next I knew I had ceased my tiptoed racing and was standing still, staring at a row of maddeningly familiar hieroglyphed shelves. They were in a state of almost perfect preservation, and only three of the doors in this vicinity had sprung open.

My feelings toward these shelves cannot be described—so utter and insistent was the sense of old acquaintance. I was looking high up at a row near the top and wholly out of my reach, and wondering how I could climb to best advantage. An open door four rows from the bottom would help, and the locks of the closed doors formed possible holds for hands and feet. I would grip the

torch between my teeth, as I had in other places where both hands were needed. Above all I must make no noise.

How to get down what I wished to remove would be difficult, but I could probably hook its movable fastener in my coat collar and carry it like a knapsack. Again I wondered whether the lock would be undamaged. That I could repeat each familiar motion I had not the least doubt. But I hoped the thing would not scrape or creak—and that my hand could work it properly.

Even as I thought these things I had taken the torch in my mouth and begun to climb. The projecting locks were poor supports; but, as I had expected, the opened shelf helped greatly. I used both the swinging door and the edge of the aperture itself in my ascent, and managed to avoid any loud creaking.

Balanced on the upper edge of the door, and leaning far to my right, I could just reach the lock I sought. My fingers, half numb from climbing, were very clumsy at first; but I soon saw that they were anatomically adequate. And the memory-rhythm was strong in them.

Out of unknown gulfs of time the intricate, secret motions had somehow reached my brain correctly in every detail—for after less than five minutes of trying there came a click whose familiarity was all the more startling because I had not consciously anticipated it. In another instant the metal door was slowly

swinging open with only the faintest grating sound.

Dazedly I looked over the row of greyish case ends thus exposed, and felt a tremendous surge of some wholly inexplicable emotion. Just within reach of my right hand was a case whose curving hieroglyphs made me shake with a pang infinitely more complex than one of mere fright. Still shaking, I managed to dislodge it amidst a shower of gritty flakes, and ease it over toward myself without any violent noise.

Like the other case I had handled, it was slightly more than twenty by fifteen inches in size, with curved mathematical designs in low relief. In thickness it just exceeded three inches.

Crudely wedging it between myself and the surface I was climbing, I fumbled with the fastener and finally got the hook free. Lifting the cover, I shifted the heavy object to my back, and let the hook catch hold of my collar. Hands now free, I awkwardly clambered down to the dusty floor, and prepared to inspect my prize.

Kneeling in the gritty dust, I swung the case around and rested it in front of me. My hands shook, and I dreaded to draw out the book within almost as much as I longed—and felt compelled—to do so. It had very gradually become clear to me what I ought to find, and this realisation nearly paralysed my faculties.

If the thing were there—and if

I were not dreaming—the implications would be quite beyond the power of the human spirit to bear. What tormented me most was my momentary inability to feel that my surroundings were a dream. The sense of reality was hideous—and again becomes so as I recall the scene.

At length I tremblingly pulled the book from its container and stared fascinatedly at the well-known hieroglyphs on the cover. It seemed to be in prime condition, and the curvilinear letters of the title held me in almost as hypnotised a state as if I could read them. Indeed, I cannot swear that I did not actually read them in some transient and terrible access of abnormal memory.

I do not know how long it was before I dared to lift that thin metal cover. I temporized and made excuses to myself. I took the torch from my mouth and shut it off to save the battery. Then, in the dark, I collected my courage finally lifting the cover without turning on the light. Last of all, I did indeed flash the torch upon the exposed page—steeling myself in advance to suppress any sound no matter what I should find.

I looked for an instant, then collapsed. Clenching my teeth, however, I kept silent. I sank wholly to the floor and put a hand to my forehead amidst the engulfing blackness. What I dreaded and expected was there. Either I was dreaming, or time and space had become a mockery.

I must be dreaming—but I

would test the horror by carrying this thing back and shewing it to my son if it were indeed a reality. My head swam frightfully, even though there were no visible objects in the unbroken gloom to swirl about me. Ideas and images of the starkest terror—excited by vistas which my glimpse had opened up—began to throng in upon me and cloud my senses.

I thought of those possible prints in the dust, and trembled at the sound of my own breathing as I did so. Once again I flashed on the light and looked at the page as a serpent's victim may look at his destroyer's eyes and fangs.

Then, with clumsy fingers, in the dark, I closed the book, put it in its container, and snapped the lid and the curious, hooked fastener. This was what I must carry back to the outer world if it truly existed—if the whole abyss truly existed—if I, and the world itself, truly existed.

Just when I tottered to my feet and commenced my return I cannot be certain. It comes to me oddly—as a measure of my sense of separation from the normal world—that I did not even once look at my watch during those hideous hours underground.

Torch in hand, and with the ominous case under one arm, I eventually found myself tiptoeing in a kind of silent panic past the draught-giving abyss and those lurking suggestions of prints. I lessened my precautions as I climbed up the

endless inclines, but could not shake off a shadow of apprehension which I had not felt on the downward journey.

I dreaded having to repass through the black basalt crypt that was older than the city itself, where cold draughts welled up from unguarded depths. I thought of that which the Great Race had feared, and of what might still be lurking—be it ever so weak and dying—down there. I thought of those five-circle prints and of what my dreams had told me of such prints—and of strange winds and whistling noises associated with them. And I thought of the tales of the modern blackfellows, wherein the horror of great winds and nameless subterrene ruins was dwelt upon.

I knew from a carved wall symbol the right floor to enter, and came at last after passing that other book I had examined—to the great circular space with the branching archways. On my right, and at once recognisable, was the arch through which I had arrived. This I now entered, conscious that the rest of my course would be harder because of the tumbled state of the masonry outside the archive building. My new metal-cased burden weighed upon me, and I found it harder and harder to be quiet as I stumbled among debris and fragments of every sort.

Then I came to the ceiling-high mound of debris through which I had wrenched a scanty passage. My dread at wriggling through again

was infinite, for my first passage had made some noise, and I now—after seeing those possible prints—dreaded sound above all things. The case, too, doubled the problem of traversing the narrow crevice.

But I clambered up the barrier as best I could, and pushed the case through the aperture ahead of me. Then, torch in mouth, I scrambled through myself—my back torn as before by stalactites.

As I tried to grasp the case again, it fell some distance ahead of me down the slope of the debris, making a disturbing clatter and arousing echoes which sent me into a cold perspiration. I lunged for it at once, and regained it without further noise—but a moment afterward the slipping of blocks under my feet raised a sudden and unprecedented din.

The din was my undoing. For, falsely or not, I thought I heard it answered in a terrible way from spaces far behind me. I thought I heard a shrill, whistling sound, like nothing else on earth, and beyond any adequate verbal description. If so, what followed has a grim irony—since, save for the panic of this thing, the second thing might never have happened.

As it was, my frenzy was absolute and unrelieved. Taking my torch in my hand and clutching feebly at the case, I leaped and bounded wildly ahead with no idea in my brain beyond a mad desire to race out of these nightmare ruins to the waking

world of desert and moonlight which lay so far above.

I hardly knew it when I reached the mountain of debris which towered into the vast blackness beyond the caved-in roof, and bruised and cut myself repeatedly in scrambling up its steep slope of jagged blocks and fragments.

Then came the great disaster. Just as I blindly crossed the summit, unprepared for the sudden dip ahead, my feet slipped utterly and I found myself involved in a mangling avalanche of sliding masonry whose cannon-loud uproar split the black cavern air in a deafening series of earth-shaking reverberations.

I have no recollection of emerging from this chaos, but a momentary fragment of consciousness shows me as plunging and tripping and scrambling along the corridor amidst the clangour—case and torch still with me.

Then, just as I approached that primal basalt crypt I had so dreaded, utter madness came. For as the echoes of the avalanche died down, there became audible a repetition of that frightful alien whistling I thought I had heard before. This time there was no doubt about it—and what was worse, it came from a point not behind but ahead of me.

Probably I shrieked aloud then. I have a dim picture of myself as flying through the hellish basalt vault of the elder things, and hearing that damnable alien sound piping up from the open, unguarded door

of limitless nether blacknesses. There was a wind, too—not merely a cool, damp draught, but a violent, purposeful blast belching savagely and frigidly from that abominable gulf whence the obscene whistling came.

There are memories of leaping and lurching over obstacles of every sort, with that torrent of wind and shrieking sound growing moment by moment, and seeming to curl and twist purposefully around me as it struck out wickedly from the spaces behind and beneath.

Though in my rear, that wind had the odd effect of hindering instead of aiding my progress; as if it acted like a noose or lasso thrown around me. Heedless of the noise I made, I clattered over a great barrier of blocks and was again in the structure that led to the surface.

I recall glimpsing the archway to the room of machines and almost crying out as I saw the incline leading down to where one of those blasphemous trap-doors must be yawning two levels below. But instead of crying out I muttered over and over to myself that this was all a dream from which I must soon awake. Perhaps I was in camp—perhaps I was at home in Arkham. As these hopes bolstered up my sanity I began to mount the incline to the higher level.

I knew, of course, that I had the four-foot cleft to re-cross, yet was too racked by other fears to realise the full horror until I came almost

upon it. On my descent, the leap across had been easy—but could I clear the gap as readily when going uphill, and hampered by fright, exhaustion, the weight of the metal case, and the anomalous backward tug of that daemon wind? I thought of these things at the last moment, and thought also of the nameless entities which might be lurking in the black abysses below the chasm.

My wavering torch was growing feeble, but I could tell by some obscure memory when I neared the cleft. The chill blasts of wind and the nauseous whistling shrieks behind me were for the moment like a merciful opiate, dulling my imagination to the horror of the yawning gulf ahead. And then I became aware of the added blasts and whistling in front of me—tides of abomination surging up through the cleft itself from depths unimagined and unimaginable.

Now, indeed, the essence of pure nightmare was upon me. Sanity departed—and, ignoring everything except the animal impulse of flight, I merely struggled and plunged upward over the incline's debris as if no gulf had existed. Then I saw the chasm's edge, leaped frenziedly with every ounce of strength I possessed, and was instantly engulfed in a pandæmoniae vortex of loathsome sound and utter, materially tangible blackness.

This is the end of my experience, so far as I can recall. Any further impressions belong wholly to the

domain of phantasmagoria delirium. Dream, madness, and memory merged wildly together in a series of fantastic, fragmentary delusions which can have no relation to anything real.

There was a hideous fall through incalculable leagues of viscous, sentient darkness, and a babel of noises utterly alien to all that we know of the earth and its organic life. Dormant, rudimentary senses seemed to start into vitality within me, telling of pits and voids peopled by floating horrors and leading to sunless crags and oceans and teeming cities of windowless, basalt towers upon which no light ever shone.

Secrets of the primal planet and its immemorial aeons flashed through my brain without the aid of sight or sound, and there were known to me things which not even the wildest of my former dreams had ever suggested. And all the while cold fingers of damp vapor clutched and picked at me, and that eldritch, damnable whistling shrieked fiendishly above all the alternations of babel and silence in the whirlpools of darkness around.

Afterward there were visions of the Cyclopean city of my dreams—not in ruins, but just as I had dreamed of it. I was in my conical, non-human body again, and mingled with crowds of the Great Race and the captive minds who carried books up and down the lofty corridors and vast inclines.

Then, superimposed upon these

pictures, were frightful, momentary flashes of a non-vistial consciousness involving desperate struggles, a writhing free from clutching tentacles of whistling wind, an insane, bat-like flight through half-solid air, a feverish burrowing through the cyclone-whipped dark, and a wild stumbling and scrambling over fallen masonry.

Once there was a curious, intrusive flash of half sight—a faint, diffuse suspicion of bluish radiance far overhead. Then there came a dream of wind—pursued climbing and crawling—of wriggling into a blaze of sardonic moonlight through a jumble of debris which slid and collapsed after me amidst a morbid hurricane. It was the evil, monotonous beating of that maddening moonlight which at last told me of the return of what I had once known as the objective, waking world.

I was clawing prone through the sands of the Australian desert, and around me shrieked such a tumult of wind as I had never before known on our planet's surface. My clothing was in rags, and my whole body was a mass of bruises and scratches.

Full consciousness returned very slowly, and at no time could I tell just where delirious dream left off and true memory began. There had seemed to be a mound of titan blocks, an abyss beneath it, a monstrous revelation from the past, and a nightmare horror at the end—but how much of this was real?

My flashlight was gone, and

likewise any metal case I may have discovered. Had there been such a case—or any abyss—or any mound? Raising my head, I looked behind me, and saw only the sterile, undulant sands of the desert.

The daemon wind died down, and the bloated, fungoid moon sank reddeningly in the west. I lurched to my feet and began to stagger southward toward the camp. What in truth had happened to me? Had I merely collapsed in the desert and dragged a dream-racked body over miles of sand and buried blocks? If not, how could I bear to live any longer?

For, in this new doubt, all my faith in the myth-born unreality of my visions dissolved once more into the hellish older doubting. If that abyss was real, then the Great Race was real—and its blasphemous reachings and seizures in the cosmos-wide vortex of time were no myths or nightmares, but a terrible, soul-shattering actuality.

Had I, in full, hideous fact, been drawn back to a pre-human world of a hundred and fifty million years ago in those dark, baffling days of the amnesia? Had my present body been the vehicle of a frightful alien consciousness from palaeogean gulfs of time?

Had I, as the captive mind of those shambling horrors, indeed known that accursed city of stone in its primordial heyday, and wriggled down those familiar corridors in the loathsome shape of my captor? Were

those tormenting dreams of more than twenty years the offspring of stark, monstrous memories?

Had I once veritably talked with minds from reachless corners of time and space, learned the universe's secrets, past and to come, and written the annals of my own world for the metal cases of those titan archives? And were those others—those shocking elder things of the mad winds and daemon pipings—in truth a lingering, lurking menace, waiting and slowly weakening in black abysses while varied shapes of life drag out their multimillennial courses on the planet's age-racked surface?

I do not know. If that abyss and what I held were real, there is no hope. Then, all too truly, there lies upon this world of man a mocking and incredible shadow out of time. But, mercifully, there is no proof that these things are other than fresh phases of my myth-born dreams. I did not bring back the metal case that would have been a proof, and so far those subterrene corridors have not been found.

If the laws of the universe are kind, they will never be found. But I must tell my son what I saw or thought I saw, and let him use his judgment as a psychologist in gauging the reality of my experience, and communicating this account to others.

I have said that the awful truth behind my tortured years of dreaming hinges absolutely upon the actuality

of what I thought I saw in those Cyclopean, buried ruins. It has been hard for me, literally, to set down that crucial revelation, though no reader can have failed to guess it. Of course, it lay in that book within the metal case—the case which I pried out of its lair amidst the dust of a million centuries.

No eye had seen, no hand had touched that book since the advent of man to this planet. And yet, when I flashed my torch upon it in that frightful abyss, I saw that the queerly pigmented letters on the brittle, aeon-browned cellulose pages were not indeed any nameless hieroglyphs of earth's youth. They were, instead, the letters of our familiar alphabet, spelling out the words of the English language in my own handwriting.

1935:

COLLABORATIONS *and* WORDPLAY.

[RETURN TO TABLE OF CONTENTS]

Only one story flowed off Lovecraft's weird-fiction pen in 1935, and it was part of a playful pact with fellow weird-fiction writer Robert Bloch—the man who today is most famous as the author of *Psycho*. The two of them agreed to include each other in stories with grisly, fatal endings. Bloch started things off with “The Shambler from the Stars,” in which a “mystic dreamer” in Providence accidentally reads aloud from an eldritch spell book, thereby conjuring a Thing from Beyond, which seizes him in its tentacles and sucks out all his blood.

Lovecraft's jovial riposte was “The Haunter of the Dark,” a

fabulous dark tale of the demise of one “Robert Blake.”

“The Haunter of the Dark” would be the last story Lovecraft wrote under his own by-line before his death. He undertook several collaborations—with William Lumley on “The Diary of Alonzo Typer” and with Kenneth Sterling on “In the Walls of Eryx.” He also got involved in a somewhat ill-starred undertaking at the behest of the editor of a fan publication titled *The Fantasy Magazine*—a 6,000-word round-robin story titled “The Challenge from Beyond,” by (in order of turns) Catherine L. Moore, Abraham Merritt, H.P. Lovecraft, Robert E. Howard and Frank Belknap Long. Although it isn't the

best work of any of the involved authors, it's tremendously fun seeing how they interact with one another's stories, so we have made another exception to our "no collaborations in this edition" policy for this piece.

The HAUNTER *of the* DARK.

[RETURN TO TABLE OF CONTENTS]

*I have seen the dark universe yawning,
Where the black planets roll without aim,
Where they roll in their horror unheeded,
Without knowledge or lustre or name.*

—Nemesis.

Cautious investigators will hesitate to challenge the common belief that Robert Blake was killed by lightning, or by some profound nervous shock derived from an electrical discharge. It is true that the window he faced was unbroken, but nature has shown herself capable of many freakish performances. The expression on his face may easily have arisen from some obscure muscular source unrelated to anything he saw, while the entries in his diary are clearly the result of a fantastic imagination aroused by certain

local superstitions and by certain old matters he had uncovered. As for the anomalous conditions at the deserted church of Federal Hill—the shrewd analyst is not slow in attributing them to some charlatanry, conscious or unconscious, with at least some of which Blake was secretly connected.

For after all, the victim was a writer and painter wholly devoted to the field of myth, dream, terror, and superstition, and avid in his quest for scenes and effects of a bizarre, spectral sort. His earlier stay in the city—a visit to a strange old

man as deeply given to occult and forbidden lore as he—had ended amidst death and flame, and it must have been some morbid instinct which drew him back from his home in Milwaukee. He may have known of the old stories despite his statements to the contrary in the diary, and his death may have nipped in the bud some stupendous hoax destined to have a literary reflection.

Among those, however, who have examined and correlated all this evidence, there remain several who cling to less rational and commonplace theories. They are inclined to take much of Blake's diary at its face value, and point significantly to certain facts such as the undoubted genuineness of the old church record, the verified existence of the disliked and unorthodox Starry Wisdom sect prior to 1877, the recorded disappearance of an inquisitive reporter named Edwin M. Lillibridge in 1893, and—above all—the look of monstrous, transfiguring fear on the face of the young writer when he died. It was one of these believers who, moved to fanatical extremes, threw into the bay the curiously angled stone and its strangely adorned metal box found in the old church steeple—the black windowless steeple, and not the tower where Blake's diary said those things originally were. Though widely censured both officially and unofficially, this man—a reputable physician with a taste for odd folklore—averred that

he had rid the earth of something too dangerous to rest upon it.

Between these two schools of opinion the reader must judge for himself. The papers have given the tangible details from a sceptical angle, leaving for others the drawing of the picture as Robert Blake saw it—or thought he saw it—or pretended to see it. Now studying the diary closely, dispassionately, and at leisure, let us summarize the dark chain of events from the expressed point of view of their chief actor.

Young Blake returned to Providence in the winter of 1934-5, taking the upper floor of a venerable dwelling in a grassy court off College Street—on the crest of the great eastward hill near the Brown University campus and behind the marble John Hay Library. It was a cosy and fascinating place, in a little garden oasis of village-like antiquity where huge, friendly cats sunned themselves atop a convenient shed. The square Georgian house had a monitor roof, classic doorway with fan carving, small-paned windows, and all the other earmarks of early nineteenth century workmanship. Inside were six-panelled doors, wide floor-boards, a curving colonial staircase, white Adam-period mantels, and a rear set of rooms three steps below the general level.

Blake's study, a large southwest chamber, overlooked the front garden on one side, while its west windows—before one of which he had his desk—faced off from the

brow of the hill and commanded a splendid view of the lower town's outspread roofs and of the mystical sunsets that flamed behind them. On the far horizon were the open countryside's purple slopes. Against these, some two miles away, rose the spectral hump of Federal Hill, bristling with huddled roofs and steeples whose remote outlines wavered mysteriously, taking fantastic forms as the smoke of the city swirled up and enmeshed them. Blake had a curious sense that he was looking upon some unknown, ethereal world which might or might not vanish in dream if ever he tried to seek it out and enter it in person.

Having sent home for most of his books, Blake bought some antique furniture suitable for his quarters and settled down to write and paint—living alone, and attending to the simple housework himself. His studio was in a north attic room, where the panes of the monitor roof furnished admirable lighting. During that first winter he produced five of his best-known short stories—"The Burrower Beneath," "The Stairs in the Crypt," "Shaggai," "In the Vale of Pnath," and "The Feaster from the Stars"—and painted seven canvases; studies of nameless, unhuman monsters, and profoundly alien, non-terrestrial landscapes.

At sunset he would often sit at his desk and gaze dreamily off at the outspread west—the dark towers of Memorial Hall just below, the

Georgian court-house belfry, the lofty pinnacles of the downtown section, and that shimmering, spire-crowned mound in the distance whose unknown streets and labyrinthine gables so potently provoked his fancy. From his few local acquaintances he learned that the far-off slope was a vast Italian quarter, though most of the houses were remnants of older Yankee and Irish days. Now and then he would train his field-glasses on that spectral, unreachable world beyond the curling smoke; picking out individual roofs and chimneys and steeples, and speculating upon the bizarre and curious mysteries they might house. Even with optical aid Federal Hill seemed somehow alien, half fabulous, and linked to the unreal, intangible marvels of Blake's own tales and pictures. The feeling would persist long after the hill had faded into the violet, lamp-starred twilight, and the court-house floodlights and the red Industrial Trust beacon had blazed up to make the night grotesque.

Of all the distant objects on Federal Hill, a certain huge, dark church most fascinated Blake. It stood out with especial distinctness at certain hours of the day, and at sunset the great tower and tapering steeple loomed blackly against the flaming sky. It seemed to rest on especially high ground; for the grimy façade, and the obliquely seen north side with sloping roof and the tops of great pointed windows, rose

boldly above the tangle of surrounding ridgepoles and chimney-pots. Peculiarly grim and austere, it appeared to be built of stone, stained and weathered with the smoke and storms of a century and more. The style, so far as the glass could show, was that earliest experimental form of Gothic revival which preceded the stately Upjohn period and held over some of the outlines and proportions of the Georgian age. Perhaps it was reared around 1810 or 1815.

As months passed, Blake watched the far-off, forbidding structure with an oddly mounting interest. Since the vast windows were never lighted, he knew that it must be vacant. The longer he watched, the more his imagination worked, till at length he began to fancy curious things. He believed that a vague, singular aura of desolation hovered over the place, so that even the pigeons and swallows shunned its smoky eaves. Around other towers and belfries his glass would reveal great flocks of birds, but here they never rested. At least, that is what he thought and set down in his diary. He pointed the place out to several friends, but none of them had even been on Federal Hill or possessed the faintest notion of what the church was or had been.

In the spring a deep restlessness gripped Blake. He had begun his long-planned novel—based on a supposed survival of the witch-cult in Maine—but was strangely unable

to make progress with it. More and more he would sit at his westward window and gaze at the distant hill and the black, frowning steeple shunned by the birds. When the delicate leaves came out on the garden boughs the world was filled with a new beauty, but Blake's restlessness was merely increased. It was then that he first thought of crossing the city and climbing bodily up that fabulous slope into the smoke-wreathed world of dream.

Late in April, just before the aeon-shadowed Walpurgis time, Blake made his first trip into the unknown. Plodding through the endless downtown streets and the bleak, decayed squares beyond, he came finally upon the ascending avenue of century-worn steps, sagging Doric porches, and bearp-paned cupolas which he felt must lead up to the long-known, unreachable world beyond the mists. There were dingy blue-and-white street signs which meant nothing to him, and presently he noted the strange, dark faces of the drifting crowds, and the foreign signs over curious shops in brown, decade-weathered buildings. Nowhere could he find any of the objects he had seen from afar; so that once more he half fancied that the Federal Hill of that distant view was a dream-world never to be trod by living human feet.

Now and then a battered church façade or crumbling spire came in sight, but never the blackened pile that he sought. When he asked a

shopkeeper about a great stone church the man smiled and shook his head, though he spoke English freely. As Blake climbed higher, the region seemed stranger and stranger, with bewildering mazes of brooding brown alleys leading eternally off to the south. He crossed two or three broad avenues, and once thought he glimpsed a familiar tower. Again he asked a merchant about the massive church of stone, and this time he could have sworn that the plea of ignorance was feigned. The dark man's face had a look of fear which he tried to hide, and Blake saw him make a curious sign with his right hand.

Then suddenly a black spire stood out against the cloudy sky on his left, above the tiers of brown roofs lining the tangled southerly alleys. Blake knew at once what it was, and plunged toward it through the squalid, unpaved lanes that climbed from the avenue. Twice he lost his way, but he somehow dared not ask any of the patriarchs or housewives who sat on their doorsteps, or any of the children who shouted and played in the mud of the shadowy lanes.

At last he saw the tower plain against the southwest, and a huge stone bulk rose darkly at the end of an alley. Presently he stood in a wind-swept open square, quaintly cobbled, with a high bank wall on the farther side. This was the end of his quest; for upon the wide, iron-railed, weed-grown plateau which

the wall supported—a separate, lesser world raised fully six feet above the surrounding streets—there stood a grim, titan bulk whose identity, despite Blake's new perspective, was beyond dispute.

The vacant church was in a state of great decrepitude. Some of the high stone buttresses had fallen, and several delicate finials lay half lost among the brown, neglected weeds and grasses. The sooty Gothic windows were largely unbroken, though many of the stone mullions were missing. Blake wondered how the obscurely painted panes could have survived so well, in view of the known habits of small boys the world over. The massive doors were intact and tightly closed. Around the top of the bank wall, fully enclosing the grounds, was a rusty iron fence whose gate—at the head of a flight of steps from the square—was visibly padlocked. The path from the gate to the building was completely overgrown. Desolation and decay hung like a pall above the place, and in the birdless eaves and black, ivyless walls Blake felt a touch of the dimly sinister beyond his power to define.

There were very few people in the square, but Blake saw a policeman at the northerly end and approached him with questions about the church. He was a great wholesome Irishman, and it seemed odd that he would do little more than make the sign of the cross and mutter that people never spoke of that building. When Blake pressed him he said very hurriedly

that the Italian priest warned everybody against it, vowing that a monstrous evil had once dwelt there and left its mark. He himself had heard dark whispers of it from his father, who recalled certain sounds and rumours from his boyhood.

There had been a bad sect there in the old days—an outlaw sect that called up awful things from some unknown gulf of night. It had taken a good priest to exorcise what had come, though there did be those who said that merely the light could do it. If Father O'Malley were alive there would be many a thing he could tell. But now there was nothing to do but let it alone. It hurt nobody now, and those that owned it were dead or far away. They had run away like rats after the threatening talk in '77, when people began to mind the way folks vanished now and then in the neighbourhood. Some day the city would step in and take the property for lack of heirs, but little good would come of anybody's touching it. Better it be left alone for the years to topple, lest things be stirred that ought to rest forever in their black abyss.

After the policeman had gone Blake stood staring at the sullen steeped pile. It excited him to find that the structure seemed as sinister to others as to him, and he wondered what grain of truth might lie behind the old tales the bluecoat had repeated. Probably they were mere legends evoked by the evil look of the place, but even so, they were like

a strange coming to life of one of his own stories.

The afternoon sun came out from behind dispersing clouds, but seemed unable to light up the stained, sooty walls of the old temple that towered on its high plateau. It was odd that the green of spring had not touched the brown, withered growths in the raised, iron-fenced yard. Blake found himself edging nearer the raised area and examining the bank wall and rusted fence for possible avenues of ingress. There was a terrible lure about the blackened fane which was not to be resisted. The fence had no opening near the steps, but round on the north side were some missing bars. He could go up the steps and walk round on the narrow coping outside the fence till he came to the gap. If the people feared the place so wildly, he would encounter no interference.

He was on the embankment and almost inside the fence before anyone noticed him. Then, looking down, he saw the few people in the square edging away and making the same sign with their right hands that the shopkeeper in the avenue had made. Several windows were slammed down, and a fat woman darted into the street and pulled some small children inside a rickety, unpainted house. The gap in the fence was very easy to pass through, and before long Blake found himself wading amidst the rotting, tangled growths of the deserted yard. Here

and there the worn stump of a headstone told him that there had once been burials in the field; but that, he saw, must have been very long ago. The sheer bulk of the church was oppressive now that he was close to it, but he conquered his mood and approached to try the three great doors in the façade. All were securely locked, so he began a circuit of the Cyclopean building in quest of some minor and more penetrable opening. Even then he could not be sure that he wished to enter that haunt of desertion and shadow, yet the pull of its strangeness dragged him on automatically.

A yawning and unprotected cellar window in the rear furnished the needed aperture. Peering in, Blake saw a subterranean gulf of cobwebs and dust faintly litten by the western sun's filtered rays. Debris, old barrels, and ruined boxes and furniture of numerous sorts met his eye, though over everything lay a shroud of dust which softened all sharp outlines. The rusted remains of a hot-air furnace showed that the building had been used and kept in shape as late as mid-Victorian times.

Acting almost without conscious initiative, Blake crawled through the window and let himself down to the dust-carpeted and debris-strewn concrete floor. The vaulted cellar was a vast one, without partitions; and in a corner far to the right, amid dense shadows, he saw a black archway evidently leading upstairs. He felt a peculiar sense of oppression

at being actually within the great spectral building, but kept it in check as he cautiously scouted about—finding a still-intact barrel amid the dust, and rolling it over to the open window to provide for his exit. Then, bracing himself, he crossed the wide, cobweb-festooned space toward the arch. Half-choked with the omnipresent dust, and covered with ghostly gossamer fibres, he reached and began to climb the worn stone steps which rose into the darkness. He had no light, but groped carefully with his hands. After a sharp turn he felt a closed door ahead, and a little fumbling revealed its ancient latch. It opened inward, and beyond it he saw a dimly illumined corridor lined with worm-eaten panelling.

Once on the ground floor, Blake began exploring in a rapid fashion. All the inner doors were unlocked, so that he freely passed from room to room. The colossal nave was an almost eldritch place with its drifts and mountains of dust over box pews, altar, hour-glass pulpit, and sounding-board and its titanic ropes of cobweb stretching among the pointed arches of the gallery and entwining the clustered Gothic columns. Over all this hushed desolation played a hideous leaden light as the declining afternoon sun sent its rays through the strange, half-blackened panes of the great apsidal windows.

The paintings on those windows were so obscured by soot that Blake could scarcely decipher what they

had represented, but from the little he could make out he did not like them. The designs were largely conventional, and his knowledge of obscure symbolism told him much concerning some of the ancient patterns. The few saints depicted bore expressions distinctly open to criticism, while one of the windows seemed to show merely a dark space with spirals of curious luminosity scattered about in it. Turning away from the windows, Blake noticed that the cobwebbed cross above the altar was not of the ordinary kind, but resembled the primordial ankh or crux ansata of shadowy Egypt.

In a rear vestry room beside the apse Blake found a rotting desk and ceiling-high shelves of mildewed, disintegrating books. Here for the first time he received a positive shock of objective horror, for the titles of those books told him much. They were the black, forbidden things which most sane people have never even heard of, or have heard of only in furtive, timorous whispers; the banned and dreaded repositories of equivocal secret and immemorial formulae which have trickled down the stream of time from the days of man's youth, and the dim, fabulous days before man was. He had himself read many of them—a Latin version of the abhorred *Necronomicon*, the sinister *Liber Ivonis*, the infamous *Cultes des Goules* of Comte d'Erlette, the *Unaussprechlichen Kulten* of von Junzt, and old Ludvig Prinn's hellish *De Vermis Mysteriis*. But

there were others he had known merely by reputation or not at all—the *Pnakotic Manuscripts*, the *Book of Dzyan*, and a crumbling volume of wholly unidentifiable characters yet with certain symbols and diagrams shudderingly recognizable to the occult student. Clearly, the lingering local rumours had not lied. This place had once been the seat of an evil older than mankind and wider than the known universe.

In the ruined desk was a small leather-bound record-book filled with entries in some odd cryptographic medium. The manuscript writing consisted of the common traditional symbols used today in astronomy and anciently in alchemy, astrology, and other dubious arts—the devices of the sun, moon, planets, aspects, and zodiacal signs—here massed in solid pages of text, with divisions and paragraphings suggesting that each symbol answered to some alphabetical letter.

In the hope of later solving the cryptogram, Blake bore off this volume in his coat pocket. Many of the great tomes on the shelves fascinated him unutterably, and he felt tempted to borrow them at some later time. He wondered how they could have remained undisturbed so long. Was he the first to conquer the clutching, pervasive fear which had for nearly sixty years protected this deserted place from visitors?

Having now thoroughly explored the ground floor, Blake ploughed again through the dust of

the spectral nave to the front vestibule, where he had seen a door and staircase presumably leading up to the blackened tower and steeple—objects so long familiar to him at a distance. The ascent was a choking experience, for dust lay thick, while the spiders had done their worst in this constricted place. The staircase was a spiral with high, narrow wooden treads, and now and then Blake passed a clouded window looking dizzily out over the city. Though he had seen no ropes below, he expected to find a bell or peal of bells in the tower whose narrow, louver-boarded lancet windows his field-glass had studied so often. Here he was doomed to disappointment; for when he attained the top of the stairs he found the tower chamber vacant of chimes, and clearly devoted to vastly different purposes.

The room, about fifteen feet square, was faintly lighted by four lancet windows, one on each side, which were glazed within their screening of decayed louver-boards. These had been further fitted with tight, opaque screens, but the latter were now largely rotted away. In the centre of the dust-laden floor rose a curiously angled stone pillar some four feet in height and two in average diameter, covered on each side with bizarre, crudely incised and wholly unrecognizable hieroglyphs. On this pillar rested a metal box of peculiarly asymmetrical form; its hinged lid thrown back, and its interior holding what looked beneath the

decade-deep dust to be an egg-shaped or irregularly spherical object some four inches through. Around the pillar in a rough circle were seven high-backed Gothic chairs still largely intact, while behind them, ranging along the dark-panelled walls, were seven colossal images of crumbling, black-painted plaster, resembling more than anything else the cryptic carved megaliths of mysterious Easter Island. In one corner of the cobwebbed chamber a ladder was built into the wall, leading up to the closed trap door of the windowless steeple above.

As Blake grew accustomed to the feeble light he noticed odd bas-reliefs on the strange open box of yellowish metal. Approaching, he tried to clear the dust away with his hands and handkerchief, and saw that the figurings were of a monstrous and utterly alien kind; depicting entities which, though seemingly alive, resembled no known life-form ever evolved on this planet. The four-inch seeming sphere turned out to be a nearly black, red-striated polyhedron with many irregular flat surfaces; either a very remarkable crystal of some sort or an artificial object of carved and highly polished mineral matter. It did not touch the bottom of the box, but was held suspended by means of a metal band around its centre, with seven queerly-designed supports extending horizontally to angles of the box's inner wall near the top. This stone, once

exposed, exerted upon Blake an almost alarming fascination. He could scarcely tear his eyes from it, and as he looked at its glistening surfaces he almost fancied it was transparent, with half-formed worlds of wonder within. Into his mind floated pictures of alien orbs with great stone towers, and other orbs with titan mountains and no mark of life, and still remoter spaces where only a stirring in vague blacknesses told of the presence of consciousness and will.

When he did look away, it was to notice a somewhat singular mound of dust in the far corner near the ladder to the steeple. Just why it took his attention he could not tell, but something in its contours carried a message to his unconscious mind. Ploughing toward it, and brushing aside the hanging cobwebs as he went, he began to discern something grim about it. Hand and handkerchief soon revealed the truth, and Blake gasped with a baffling mixture of emotions. It was a human skeleton, and it must have been there for a very long time. The clothing was in shreds, but some buttons and fragments of cloth bespoke a man's grey suit. There were other bits of evidence—shoes, metal clasps, huge buttons for round cuffs, a stickpin of bygone pattern, a reporter's badge with the name of the old Providence Telegram, and a crumbling leather pocketbook. Blake examined the latter with care, finding within it several bills of antiquated issue, a

celluloid advertising calendar for 1893, some cards with the name "Edwin M. Lillibridge," and a paper covered with pencilled memoranda.

This paper held much of a puzzling nature, and Blake read it carefully at the dim westward window. Its disjointed text included such phrases as the following:

Prof. Enoch Bowen home from Egypt May 1844—buys old Free-Will Church in July—his archaeological work & studies in occult well known.

Dr. Drowne of 4th Baptist warns against Starry Wisdom in sermon 29 Dec. 1844.

Congregation 97 by end of '45. 1846—3 disappearances—first mention of Shining Trapezohedron.

7 disappearances 1848—stories of blood sacrifice begin.

Investigation 1853 comes to nothing—stories of sounds.

Fr. O'Malley tells of devil-worship with box found in great Egyptian ruins—says they call up something that can't exist in light. Flees a little light, and banished by strong light. Then has to be summoned again. Probably got this from deathbed confession of Francis X. Feeney, who had joined Starry Wisdom in '49. These people say the Shining Trapezohedron shows them heaven & other worlds, & that the Haunter of the Dark tells them secrets in some way.

Story of Orrin B. Eddy 1857. They call it up by gazing at the crystal, & have a secret language of their own.

200 or more in cong. 1863, exclusive of men at front.

Irish boys mob church in 1869 after Patrick Regan's disappearance.

Veiled article in J. 14 March '72, but people don't talk about it.

6 disappearances 1876—secret committee calls on Mayor Doyle.

Action promised Feb. 1877—church closes in April.

Gang—Federal Hill Boys—threaten Dr—and vestrymen in May.

181 persons leave city before end of '77—mention no names.

Ghost stories begin around 1880—try to ascertain truth of report that no human being has entered church since 1877.

Ask Lanigan for photograph of place taken 1851...

Restoring the paper to the pocketbook and placing the latter in his coat, Blake turned to look down at the skeleton in the dust. The implications of the notes were clear, and there could be no doubt but that this man had come to the deserted edifice forty-two years before in quest of a newspaper sensation which no one else had been bold enough to attempt. Perhaps no one else had known of his plan—who could tell? But he had never returned to his paper. Had some bravely-suppressed fear risen to overcome him and bring on sudden heart-failure? Blake stooped over the gleaming bones and noted their peculiar state. Some of them were badly scattered, and a few seemed oddly dissolved at the

ends. Others were strangely yellowed, with vague suggestions of charring. This charring extended to some of the fragments of clothing. The skull was in a very peculiar state—stained yellow, and with a charred aperture in the top as if some powerful acid had eaten through the solid bone. What had happened to the skeleton during its four decades of silent entombment here Blake could not imagine.

Before he realized it, he was looking at the stone again, and letting its curious influence call up a nebulous pageantry in his mind. He saw processions of robed, hooded figures whose outlines were not human, and looked on endless leagues of desert lined with carved, sky-reaching monoliths. He saw towers and walls in nighted depths under the sea, and vortices of space where wisps of black mist floated before thin shimmerings of cold purple haze. And beyond all else he glimpsed an infinite gulf of darkness, where solid and semisolid forms were known only by their windy stirrings, and cloudy patterns of force seemed to superimpose order on chaos and hold forth a key to all the paradoxes and arcana of the worlds we know.

Then all at once the spell was broken by an access of gnawing, indeterminate panic fear. Blake choked and turned away from the stone, conscious of some formless alien presence close to him and watching him with horrible

intentness. He felt entangled with something—something which was not in the stone, but which had looked through it at him—something which would ceaselessly follow him with a cognition that was not physical sight.

Plainly, the place was getting on his nerves—as well it might in view of his gruesome find. The light was waning, too, and since he had no illuminant with him he knew he would have to be leaving soon.

It was then, in the gathering twilight, that he thought he saw a faint trace of luminosity in the crazily angled stone. He had tried to look away from it, but some obscure compulsion drew his eyes back. Was there a subtle phosphorescence of radio-activity about the thing? What was it that the dead man's notes had said concerning a Shining Trapezohedron? What, anyway, was this abandoned lair of cosmic evil? What had been done here, and what might still be lurking in the bird-shunned shadows? It seemed now as if an elusive touch of foetor had arisen somewhere close by, though its source was not apparent. Blake seized the cover of the long-open box and snapped it down. It moved easily on its alien hinges, and closed completely over the unmistakably glowing stone.

At the sharp click of that closing a soft stirring sound seemed to come from the steeple's eternal blackness overhead, beyond the trap-door. Rats, without question—the only

living things to reveal their presence in this accursed pile since he had entered it. And yet that stirring in the steeple frightened him horribly, so that he plunged almost wildly down the spiral stairs, across the ghoulish nave, into the vaulted basement, out amidst the gathering dust of the deserted square, and down through the teeming, fear-haunted alleys and avenues of Federal Hill towards the sane central streets and the home-like brick sidewalks of the college district.

During the days which followed, Blake told no one of his expedition. Instead, he read much in certain books, examined long years of newspaper files downtown, and worked feverishly at the cryptogram in that leather volume from the cobwebbed vestry room. The cipher, he soon saw, was no simple one; and after a long period of endeavour he felt sure that its language could not be English, Latin, Greek, French, Spanish, Italian, or German. Evidently he would have to draw upon the deepest wells of his strange erudition.

Every evening the old impulse to gaze westwards returned, and he saw the black steeple as of yore amongst the bristling roofs of a distant and half-fabulous world. But now it held a fresh note of terror for him. He knew the heritage of evil lore it masked, and with the

knowledge his vision ran riot in queer new ways. The birds of spring were returning, and as he watched their sunset flights he fancied they avoided the gaunt, lone spire as never before. When a flock of them approached it, he thought, they would wheel and scatter in panic confusion—and he could guess at the wild twitterings which failed to reach him across the intervening miles.

It was in June that Blake's diary told of his victory over the cryptogram. The text was, he found, in the dark Aklo language used by certain cults of evil antiquity, and known to him in a halting way through previous researches. The diary is strangely reticent about what Blake deciphered, but he was patently awed and disconcerted by his results. There are references to a Haunter of the Dark awaked by gazing into the Shining Trapezohedron, and insane conjectures about the black gulfs of chaos from which it was called. The being is spoken of as holding all knowledge, and demanding monstrous sacrifices. Some of Blake's entries show fear lest the thing, which he seemed to regard as summoned, stalk abroad; though he adds that the streetlights form a bulwark which cannot be crossed.

Of the Shining Trapezohedron he speaks often, calling it a window on all time and space, and tracing its history from the days it was fashioned on dark Yuggoth, before ever

the Old Ones brought it to earth. It was treasured and placed in its curious box by the crinoid things of Antarctica, salvaged from their ruins by the serpent-men of Valusia, and peered at aeons later in Lemuria by the first human beings. It crossed strange lands and stranger seas, and sank with Atlantis before a Minoan fisher meshed it in his net and sold it to swarthy merchants from nighted Khem. The Pharaoh Nephren-Ka built around it a temple with a windowless crypt, and did that which caused his name to be stricken from all monuments and records. Then it slept in the ruins of that evil fane which the priests and the new Pharaoh destroyed, till the delver's spade once more brought it forth to curse mankind.

Early in July the newspapers oddly supplement Blake's entries, though in so brief and casual a way that only the diary has called general attention to their contribution. It appears that a new fear had been growing on Federal Hill since a stranger had entered the dreaded church. The Italians whispered of unaccustomed stirrings and bumpings and scrapings in the dark windowless steeple, and called on their priests to banish an entity which haunted their dreams. Something, they said, was constantly watching at a door to see if it were dark enough to venture forth. Press items mentioned the longstanding local superstitions, but failed to shed much light on the earlier background

of the horror. It was obvious that the young reporters of today are no anti-quarians. In writing of these things in his diary, Blake expresses a curious kind of remorse, and talks of the duty of burying the Shining Trapezohedron and of banishing what he had evoked by letting daylight into the hideous jutting spire. At the same time, however, he displays the dangerous extent of his fascination, and admits a morbid longing—pervading even his dreams—to visit the accursed tower and gaze again into the cosmic secrets of the glowing stone.

Then something in the Journal on the morning of 17 July threw the diarist into a veritable fever of horror. It was only a variant of the other half-humorous items about the Federal hill restlessness, but to Blake it was somehow very terrible indeed. In the night a thunderstorm had put the city's lighting-system out of commission for a full hour, and in that black interval the Italians had nearly gone mad with fright. Those living near the dreaded church had sworn that the thing in the steeple had taken advantage of the street lamps' absence and gone down into the body of the church, flopping and bumping around in a viscous, altogether dreadful way. Towards the last it had bumped up to the tower, where there were sounds of the shattering of glass. It could go wherever the darkness reached, but light would always send it fleeing.

When the current blazed on

again there had been a shocking commotion in the tower, for even the feeble light trickling through the grime-blackened, louver-boarded windows was too much for the thing. It had bumped and slithered up into its tenebrous steeple just in time—for a long dose of light would have sent it back into the abyss whence the crazy stranger had called it. During the dark hour praying crowds had clustered round the church in the rain with lighted candles and lamps somehow shielded with folded paper and umbrellas—a guard of light to save the city from the nightmare that stalks in darkness. Once, those nearest the church declared, the outer door had rattled hideously.

But even this was not the worst. That evening in the Bulletin Blake read of what the reporters had found. Aroused at last to the whimsical news value of the scare, a pair of them had defied the frantic crowds of Italians and crawled into the church through the cellar window after trying the doors in vain. They found the dust of the vestibule and of the spectral nave ploughed up in a singular way, with bits of rotted cushions and satin pew-linings scattered curiously around. There was a bad odour everywhere, and here and there were bits of yellow stain and patches of what looked like charring. Opening the door to the tower, and pausing a moment at the suspicion of a scraping sound above, they found the narrow spiral stairs wiped roughly clean.

In the tower itself a similarly half-swept condition existed. They spoke of the heptagonal stone pillar, the overturned Gothic chairs, and the bizarre plaster images; though strangely enough the metal box and the old mutilated skeleton were not mentioned. What disturbed Blake the most—except for the hints of stains and charring and bad odours—was the final detail that explained the crashing glass. Every one of the tower's lancet windows was broken, and two of them had been darkened in a crude and hurried way by the stuffing of satin pew-linings and cushion-horsehair into the spaces between the slanting exterior louver-boards. More satin fragments and bunches of horsehair lay scattered around the newly swept floor, as if someone had been interrupted in the act of restoring the tower to the absolute blackness of its tightly curtained days.

Yellowish stains and charred patches were found on the ladder to the windowless spire, but when a reporter climbed up, opened the horizontally-sliding trap-door and shot a feeble flashlight beam into the black and strangely foetid space, he saw nothing but darkness, and a heterogeneous litter of shapeless fragments near the aperture. The verdict, of course, was charlatanry. Somebody had played a joke on the superstitious hill-dwellers, or else some fanatic had striven to bolster up their fears for their own supposed good. Or perhaps some of the

younger and more sophisticated dwellers had staged an elaborate hoax on the outside world. There was an amusing aftermath when the police sent an officer to verify the reports. Three men in succession found ways of evading the assignment, and the fourth went very reluctantly and returned very soon without adding to the account given by the reporters.

From this point onwards Blake's diary shows a mounting tide of insidious horror and nervous apprehension. He upbraids himself for not doing something, and speculates wildly on the consequences of another electrical breakdown. It had been verified that on three occasions—during thunderstorms—he telephoned the electric light company in a frantic vein and asked that desperate precautions against a lapse of power be taken. Now and then his entries show concern over the failure of the reporters to find the metal box and stone, and the strangely marred old skeleton, when they explored the shadowy tower room. He assumed that these things had been removed—whither, and by whom or what, he could only guess. But his worst fears concerned himself, and the kind of unholy rapport he felt to exist between his mind and that lurking horror in the distant steeple—that monstrous thing of night which his rashness had called out of the ultimate black spaces. He seemed to feel a constant tugging at his will, and callers of that

period remember how he would sit abstractedly at his desk and stare out of the west window at that far-off spire-bristling mound beyond the swirling smoke of the city. His entries dwell monotonously on certain terrible dreams, and of a strengthening of the unholy rapport in his sleep. There is mention of a night when he awakened to find himself fully dressed, outdoors, and headed automatically down College Hill towards the west. Again and again he dwells on the fact that the thing in the steeple knows where to find him.

The week following 30 July is recalled as the time of Blake's partial breakdown. He did not dress, and ordered all his food by telephone. Visitors remarked the cords he kept near his bed, and he said that sleep-walking had forced him to bind his ankles every night with knots which would probably hold or else waken him with the labour of untying. In his diary he told of the hideous experience which had brought the collapse. After retiring on the night of the 30th, he had suddenly found himself groping about in an almost black space. All he could see were short, faint, horizontal streaks of bluish light, but he could smell an overpowering foetor and hear a curious jumble of soft, furtive sounds above him. Whenever he moved he stumbled over something, and

at each noise there would come a sort of answering sound from above—a vague stirring, mixed with the cautious sliding of wood on wood.

Once his groping hands encountered a pillar of stone with a vacant top, whilst later he found himself clutching the rungs of a ladder built into the wall, and fumbling his uncertain way upwards towards some region of intenser stench where a hot, searing blast beat down against him. Before his eyes a kaleidoscopic range of phantasmal images played, all of them dissolving at intervals into the picture of a vast, unplumbed abyss of night wherein whirled suns and worlds of an even profounder blackness. He thought of the ancient legends of Ultimate Chaos, at whose centre sprawls the blind idiot god Azathoth, Lord of All Things, encircled by his flopping horde of mindless and amorphous dancers, and lulled by the thin monotonous piping of a demoniac flute held in nameless paws.

Then a sharp report from the outer world broke through his stupor and roused him to the unutterable horror of his position. What it was, he never knew—perhaps it was some belated peal from the fireworks heard all summer on Federal Hill as the dwellers hail their various patron saints, or the saints of their native villages in Italy. In any event he shrieked aloud, dropped frantically from the ladder, and stumbled blindly across the obstructed floor

of the almost lightless chamber that encompassed him.

He knew instantly where he was, and plunged recklessly down the narrow spiral staircase, tripping and bruising himself at every turn. There was a nightmare flight through a vast cobwebbed nave whose ghostly arches reached up to realms of leering shadow, a sightless scramble through a littered basement, a climb to regions of air and street lights outside, and a mad racing down a spectral hill of gibbering gables, across a grim, silent city of tall black towers, and up the steep eastward precipice to his own ancient door.

On regaining consciousness in the morning he found himself lying on his study floor fully dressed. Dirt and cobwebs covered him, and every inch of his body seemed sore and bruised. When he faced the mirror he saw that his hair was badly scorched while a trace of strange evil odour seemed to cling to his upper outer clothing. It was then that his nerves broke down. Thereafter, lounging exhaustedly about in a dressing-gown, he did little but stare from his west window, shiver at the threat of thunder, and make wild entries in his diary.

The great storm broke just before midnight on 8 August. Lightning struck repeatedly in all parts of the city, and two remarkable fireballs were reported. The rain was torrential,

while a constant fusillade of thunder brought sleeplessness to thousands. Blake was utterly frantic in his fear for the lighting system, and tried to telephone the company around 1 a.m. though by that time service had been temporarily cut off in the interests of safety. He recorded everything in his diary—the large, nervous, and often undecipherable, hieroglyphs telling their own story of growing frenzy and despair, and of entries scrawled blindly in the dark.

He had to keep the house dark in order to see out of the window, and it appears that most of his time was spent at his desk, peering anxiously through the rain across the glistening miles of downtown roofs at the constellation of distant lights marking Federal Hill. Now and then he would fumblingly make an entry in his diary, so that detached phrases such as "The lights must not go"; "It knows where I am"; "I must destroy it"; and "it is calling to me, but perhaps it means no injury this time"; are found scattered down two of the pages.

Then the lights went out all over the city. It happened at 2.12 a.m. according to power-house records, but Blake's diary gives no indication of the time. The entry is merely, "Lights out—God help me."

On Federal Hill there were watchers as anxious as he, and rain-soaked knots of men paraded the square and alleys around the evil church with umbrella-shaded

candles, electric flashlights, oil lanterns, crucifixes, and obscure charms of the many sorts common to southern Italy. They blessed each flash of lightning, and made cryptical signs of fear with their right hands when a turn in the storm caused the flashes to lessen and finally to cease altogether. A rising wind blew out most of the candles, so that the scene grew threateningly dark. Someone roused Father Merluzzo of Spirito Santo Church, and he hastened to the dismal square to pronounce whatever helpful syllables he could. Of the restless and curious sounds in the blackened tower, there could be no doubt whatever.

For what happened at 2.35 we have the testimony of the priest, a young, intelligent, and well-educated person; of Patrolman William J. Monohan of the Central Station, an officer of the highest reliability who had paused at that part of his beat to inspect the crowd; and of most of the seventy-eight men who had gathered around the church's high bank wall—especially those in the square where the eastward façade was visible. Of course there was nothing which can be proved as being outside the order of Nature. The possible causes of such an event are many. No one can speak with certainty of the obscure chemical processes arising in a vast, ancient, ill-aired, and long-deserted building of heterogeneous contents. Mephitic vapours—spontaneous combustion—pressure of gases born of long

decay—any one of numberless phenomena might be responsible. And then, of course, the factor of conscious charlatanry can by no means be excluded. The thing was really quite simple in itself, and covered less than three minutes of actual time. Father Merluzzo, always a precise man, looked at his watch repeatedly.

It started with a definite swelling of the dull fumbling sounds inside the black tower. There had for some time been a vague exhalation of strange, evil odours from the church, and this had now become emphatic and offensive. Then at last there was a sound of splintering wood and a large, heavy object crashed down in the yard beneath the frowning easterly façade. The tower was invisible now that the candles would not burn, but as the object neared the ground the people knew that it was the smoke-grimed louvre-boarding of that tower's east window.

Immediately afterwards an utterly unbearable foetor welled forth from the unseen heights, choking and sickening the trembling watchers, and almost prostrating those in the square. At the same time the air trembled with a vibration as of flapping wings, and a sudden east-blowing wind more violent than any previous blast snatched off the hats and wrenched the dripping umbrellas from the crowd. Nothing definite could be seen in the candleless night, though some upward-looking spectators thought they glimpsed a great

spreading blur of denser blackness against the inky sky—something like a formless cloud of smoke that shot with meteorlike speed towards the east.

That was all. The watchers were half numbed with fright, awe, and discomfort, and scarcely knew what to do, or whether to do anything at all. Not knowing what had happened, they did not relax their vigil; and a moment later they sent up a prayer as a sharp flash of belated lightning, followed by an earsplitting crash of sound, rent the flooded heavens. Half an hour later the rain stopped, and in fifteen minutes more the street lights sprang on again, sending the weary, bedraggled watchers relievedly back to their homes.

The next day's papers gave these matters minor mention in connection with the general storm reports. It seems that the great lightning flash and deafening explosion which followed the Federal Hill occurrence were even more tremendous farther east, where a burst of the singular foetor was likewise noticed. The phenomenon was most marked over College Hill, where the crash awakened all the sleeping inhabitants and led to a bewildered round of speculations. Of those who were already awake only a few saw the anomalous blaze of light near the top of the hill, or noticed the inexplicable upward rush of air which almost stripped the leaves from the trees and blasted the plants in the gardens. It was agreed that the lone, sudden

lightning-bolt must have struck somewhere in this neighbourhood, though no trace of its striking could afterwards be found. A youth in the Tau Omega fraternity house thought he saw a grotesque and hideous mass of smoke in the air just as the preliminary flash burst, but his observation has not been verified. All of the few observers, however, agree as to the violent gust from the west and the flood of intolerable stench which preceded the belated stroke, whilst evidence concerning the momentary burned odour after the stroke is equally general.

These points were discussed very carefully because of their probable connection with the death of Robert Blake. Students in the Psi Delta house, whose upper rear windows looked into Blake's study, noticed the blurred white face at the westward window on the morning of the ninth, and wondered what was wrong with the expression. When they saw the same face in the same position that evening, they felt worried, and watched for the lights to come up in his apartment. Later they rang the bell of the darkened flat, and finally had a policeman force the door.

The rigid body sat bolt upright at the desk by the window, and when the intruders saw the glassy, bulging eyes, and the marks of stark, convulsive fright on the twisted features, they turned away in sickened dismay. Shortly afterwards the coroner's physician made an examination, and

despite the unbroken window reported electrical shock, or nervous tension induced by electrical discharge, as the cause of death. The hideous expression he ignored altogether, deeming it a not improbable result of the profound shock as experienced by a person of such abnormal imagination and unbalanced emotions. He deduced these latter qualities from the books, paintings, and manuscripts found in the apartment, and from the blindly scrawled entries in the diary on the desk. Blake had prolonged his frenzied jottings to the last, and the broken-pointed pencil was found clutched in his spasmodically contracted right hand.

The entries after the failure of the lights were highly disjointed, and legible only in part. From them certain investigators have drawn conclusions differing greatly from the materialistic official verdict, but such speculations have little chance for belief among the conservative. The case of these imaginative theorists has not been helped by the action of superstitious Doctor Dexter, who threw the curious box and angled stone—an object certainly self-luminous as seen in the black windowless steeple where it was found—into the deepest channel of Narragansett Bay. Excessive imagination and neurotic unbalance on Blake's part, aggravated by knowledge of the evil bygone cult whose startling traces he had uncovered, form the

dominant interpretation given those final frenzied jottings. These are the entries—or all that can be made of them:

Lights still out—must be five minutes now. Everything depends on lightning. Yaddith grant it will keep up!... Some influence seems beating through it... Rain and thunder and wind deafen... The thing is taking hold of my mind...

Trouble with memory. I see things I never knew before. Other worlds and other galaxies... Dark... The lightning seems dark and the darkness seems light...

It cannot be the real hill and church that I see in the pitch-darkness. Must be retinal impression left by flashes. Heaven grant the Italians are out with their candles if the lightning stops!

What am I afraid of? Is it not an avatar of Nyarlathotep, who in antique and shadowy Khem even took the form of man? I remember Yuggoth, and more distant Shaggai, and the ultimate void of the black planets...

The long, winging flight through the void... cannot cross the universe of light... re-created by the thoughts caught in the Shining Trapezohedron... send it through the horrible abysses of radiance...

My name is Blake—Robert Harrison Blake of 620 East Knapp Street, Milwaukee, Wisconsin... I am on this planet...

Azathoth have mercy!—the lightning no longer flashes—horrible—I can see everything with a monstrous

sense that is not sight—light is dark and dark is light... those people on the hill... guard... candles and charms... their priests...

Sense of distance gone—far is near and near is far. No light—no glass—see that steeple—that tower—window—can hear—Roderick Usher—am mad or going mad—the thing is stirring and fumbling in the tower.

I am it and it is I—I want to get out... must get out and unify the forces... it knows where I am...

I am Robert Blake, but I see the tower in the dark. There is a monstrous odour... senses transfigured... boarding at that tower window cracking and giving way... Iä... ngai... ygg...

I see it—coming here—hell-wind—titan blur—black wing—Yog Sothoth save me—the three-lobed burning eye...

The CHALLENGE from BEYOND.

*A "ROUND ROBIN" WRITTEN WITH C.L. MOORE,
A.MERRITT, ROBERT E. HOWARD AND FRANK BELKNAP LONG*

I.

(By C.L. Moore)

George Campbell opened sleep-fogged eyes upon darkness and lay gazing out of the tent flap upon the pale August night for some minutes before he roused enough even to wonder what had wakened him. There was in the keen, clear air of these Canadian woods a soporific as potent as any drug. Campbell lay quiet for a moment, sinking slowly back into the delicious borderlands of sleep, conscious of an exquisite weariness, an unaccustomed sense of muscles well used, and relaxed now into perfect ease. These were vacation's most delightful moments,

after all—rest, after toil, in the clear, sweet forest night.

Luxuriously, as his mind sank backward into oblivion, he assured himself once more that three long months of freedom lay before him—freedom from cities and monotony, freedom from pedagogy and the University and students with no rudiments of interest in the geology he earned his daily bread by dinning into their obdurate ears. Freedom from —

Abruptly the delightful somnolence crashed about him. Somewhere outside the sound of tin shrieking across tin slashed into his peace. George Campbell sat up jerkily and reached for his flashlight. Then he laughed and put it down again,

straining his eyes through the midnight gloom outside where among the tumbling cans of his supplies a dark anonymous little night beast was prowling. He stretched out a long arm and groped about among the rocks at the tent door for a missile. His fingers closed on a large stone, and he drew back his hand to throw.

But he never threw it. It was such a queer thing he had come upon in the dark. Square, crystal smooth, obviously artificial, with dull rounded corners. The strangeness of its rock surfaces to his fingers was so remarkable that he reached again for his flashlight and turned its rays upon the thing he held.

All sleepiness left him as he saw what it was he had picked up in his idle groping. It was clear as rock crystal, this queer, smooth cube. Quartz, unquestionably, but not in its usual hexagonal crystallized form. Somehow—he could not guess the method—it had been wrought into a perfect cube, about four inches in measurement over each worn face. For it was incredibly worn. The hard, hard crystal was rounded now until its corners were almost gone and the thing was beginning to assume the outlines of a sphere. Ages and ages of wearing, years almost beyond counting, must have passed over this strange clear thing.

But the most curious thing of all was that shape he could make out dimly in the heart of the crystal. For imbedded in its center lay a little

disc of a pale and nameless substance with characters incised deep upon its quartz-enclosed surface. Wedge-shaped characters, faintly reminiscent of cuneiform writing.

George Campbell wrinkled his brows and bent closer above the little enigma in his hands, puzzling helplessly. How could such a thing as this have imbedded in pure rock crystal? Remotely a memory floated through his mind of ancient legends that called quartz crystals ice which had frozen too hard to melt again. Ice—and wedge-shaped cuneiforms—yes, didn't that sort of writing originate among the Sumerians who came down from the north in history's remotest beginnings to settle in the primitive Mesopotamian valley? Then hard sense regained control and he laughed. Quartz, of course, was formed in the earliest of earth's geological periods, when there was nothing anywhere but heat and heaving rock. Ice had not come for tens of millions of years after this thing must have been formed.

And yet—that writing. Man-made, surely, although its characters were unfamiliar save in their faint hinting at cuneiform shapes. Or could there, in a Paleozoic world, have been things with a written language who might have graven these cryptic wedges upon the quartz-enveloped disc he held? Or—might a thing like this have fallen meteor-like out of space into the unformed rock of a still molten world? Could it—

Then he caught himself up sharply and felt his ears going hot at the luridness of his own imagination. The silence and the solitude and the queer thing in his hands were conspiring to play tricks with his common sense. He shrugged and laid the crystal down at the edge of his pallet, switching off the light. Perhaps morning and a clear head would bring him an answer to the questions that seemed so insoluble now.

But sleep did not come easily. For one thing, it seemed to him as he flashed off the light, that the little cube had shone for a moment as if with sustained light before it faded into the surrounding dark. Or perhaps he was wrong. Perhaps it had been only his dazzled eyes that seemed to see the light forsake it reluctantly, glowing in the enigmatic deeps of the thing with queer persistence.

He lay there unquietly for a long while, turning the unanswered questions over and over in his mind. There was something about this crystal cube out of the unmeasured past, perhaps from the dawn of all history, that constituted a challenge that would not let him sleep.

II.

(By A. Merritt)

He lay there, it seemed to him, for hours. It had been the lingering light, the luminescence that seemed so

reluctant to die, which held his mind. It was as though something in the heart of the cube had awakened, stirred drowsily, become suddenly alert... and intent upon him.

Sheer fantasy, this. He stirred impatiently and flashed his light upon his watch. Close to one o'clock; three hours more before the dawn. The beam fell and was focused upon the warm crystal cube. He held it there closely, for minutes. He snapped it out, then watched.

There was no doubt about it now. As his eyes accustomed themselves to the darkness, he saw that the strange crystal was glimmering with tiny fugitive lights deep within it like threads of sapphire lightnings. They were at its center and they seemed to him to come from the pale disk with its disturbing markings. And the disc itself was becoming larger... the markings shifting shapes... the cube was growing... was it illusion brought about by the tiny lightnings....?

He heard a sound. It was the very ghost of a sound, like the ghosts of harp strings being plucked with ghostly fingers. He bent closer. It came from the cube....

There was squeaking in the underbrush, a flurry of bodies and an agonized wailing like a child in death throes and swiftly stilled. Some small tragedy of the wilderness, killer and prey. He stepped over to where it had been enacted, but could see nothing. He again snapped

off the flash and looked toward his tent. Upon the ground was a pale blue glimmering. It was the cube. He stooped to pick it up; then obeying some obscure warning, drew back his hand.

And again, he saw, its glow was dying. The tiny sapphire lightnings flashing fitfully, withdrawing to the disc from which they had come. There was no sound from it.

He sat, watching the luminescence glow and fade, glow and fade, but steadily becoming dimmer. It came to him that two elements were necessary to produce the phenomenon. The electric ray itself, and his own fixed attention. His mind must travel along the ray, fix itself upon the cube's heart, if its beat were to wax, until... what?

He felt a chill of spirit, as though from contact with some alien thing. It was alien, he knew it; not of this earth. Not of earth's life. He conquered his shrinking, picked up the cube and took it into the tent. It was neither warm nor cold; except for its weight he would not have known he held it. He put it upon the table, keeping the torch turned from it; then stepped to the flap of the tent and closed it.

He went back to the table, drew up the camp chair, and turned the flash directly upon the cube, focusing it so far as he could upon its heart. He sent all his will, all his concentration, along it; focusing will and sight upon the disc as he had the light.

As though at command, the sapphire lightnings burned forth. They burst from the disc into the body of the crystal cube, then beat back, bathing the disc and the markings. Again these began to change, shifting, moving, advancing, and retreating in the blue gleaming. They were no longer cuneiform. They were things... objects.

He heard the murmuring music, the plucked harp strings. Louder grew the sound and louder, and now all the body of the cube vibrated to their rhythm. The crystal walls were melting, growing misty as though formed of the mist of diamonds. And the disc itself was growing... the shapes shifting, dividing and multiplying as though some door had been opened and into it companies of phantasms were pouring while brighter, more bright grew the pulsing light.

He felt swift panic, tried to withdraw sight and will, dropped the flash. The cube had no need now of the ray... and he could not withdraw... could not withdraw? Why, he himself was being sucked into that disc which was now a globe within which unnameable shapes danced to a music that bathed the globe with steady radiance.

There was no tent. There was only a vast curtain of sparkling mist behind which shone the globe.... He felt himself drawn through that mist, sucked through it as if by a mighty wind, straight for the globe.

III.

(By H. P. Lovecraft)

As the mist-blurred light of the sapphire suns grew more and more intense, the outlines of the globe ahead wavered and dissolved to a churning chaos. Its pallor and its motion and its music all blended themselves with the engulfing mist—bleaching it to a pale steel-colour and setting it undulantly in motion. And the sapphire suns, too, melted imperceptibly into the greying infinity of shapeless pulsation.

Meanwhile the sense of forward, outward motion grew intolerably, incredibly, cosmically swift. Every standard of speed known to earth seemed dwarfed, and Campbell knew that any such flight in physical reality would mean instant death to a human being. Even as it was—in this strange, hellish hypnosis or nightmare—the quasi-visual impression of meteor-like hurtling almost paralyzed his mind. Though there were no real points of reference in the grey, pulsing void, he felt that he was approaching and passing the speed of light itself. Finally his consciousness did go under—and merciful blackness swallowed everything.

It was very suddenly, and amidst the most impenetrable darkness, that thoughts and ideas again came to George Campbell. Of how many moments—or

years—or eternities—had elapsed since his flight through the grey void, he could form no estimate. He knew only that he seemed to be at rest and without pain. Indeed, the absence of all physical sensation was the salient quality of his condition. It made even the blackness seem less solidly black—suggesting as it did that he was rather a disembodied intelligence in a state beyond physical senses, than a corporeal being with senses deprived of their accustomed objects of perception. He could think sharply and quickly—almost preternaturally so—yet could form no idea whatsoever of his situation.

Half by instinct, he realised that he was not in his own tent. True, he might have awaked there from a nightmare to a world equally black; yet he knew this was not so. There was no camp cot beneath him—he had no hands to feel the blankets and canvas surface and flashlight that ought to be around him—there was no sensation of cold in the air—no flap through which he could glimpse the pale night outside... something was wrong, dreadfully wrong.

He cast his mind backward and thought of the fluorescent cube which had hypnotised him—of that, and all which had followed. He had known that his mind was going, yet had been unable to draw back. At the last moment there had been a shocking, panic fear—a subconscious

fear beyond even that caused by the sensation of daemonic flight. It had come from some vague flash or remote recollection—just what, he could not at once tell. Some cell-group in the back of his head had seemed to find a cloudily familiar quality in the cube—and that familiarity was fraught with dim terror. Now he tried to remember what the familiarity and the terror were.

Little by little it came to him. Once—long ago, in connection with his geological life-work—he had read of something like that cube. It had to do with those debatable and disquieting clay fragments called the Eltdown Shards, dug up from pre-carboniferous strata in southern England thirty years before. Their shape and markings were so queer that a few scholars hinted at artificiality, and made wild conjectures about them and their origin. They came, clearly, from a time when no human beings could exist on the globe—but their contours and figurings were damnably puzzling. That was how they got their name.

It was not, however, in the writings of any sober scientist that Campbell had seen that reference to a crystal, disc-holding globe. The source was far less reputable, and infinitely more vivid. About 1912 a deeply learned Sussex clergyman of occultist leanings—the Reverend Arthur Brooke Winters-Hall—had professed to identify the markings on the Eltdown Shards with some of the so-called “pre-human

hieroglyphs” persistently cherished and esoterically handed down in certain mystical circles, and had published at his own expense what purported to be a “translation” of the primal and baffling “inscriptions”—a “translation” still quoted frequently and seriously by occult writers. In this “translation”—a surprisingly long brochure in view of the limited number of “shards” existing—had occurred the narrative, supposedly of pre-human authorship, containing the now frightening reference.

As the story went, there dwelt on a world—and eventually on countless other worlds—of outer space a mighty order of worm-like beings whose attainments and whose control of nature surpassed anything within the range of terrestrial imagination. They had mastered the art of interstellar travel early in their career, and had peopled every habitable planet in their own galaxy—killing off the races they found.

Beyond the limits of their own galaxy—which was not ours—they could not navigate in person; but in their quest for knowledge of all space and time they discovered a means of spanning certain transgalactic gulfs with their minds. They devised peculiar objects—strangely energized cubes of a curious crystal containing hypnotic talismen and enclosed in space-resisting spherical envelopes of an unknown substance—which could be forcibly expelled beyond the limits of their universe, and which would respond

to the attraction of cool solid matter only.

These, of which a few would necessarily land on various inhabited worlds in outside universes, formed the ether-bridges needed for mental communication. Atmospheric friction burned away the protecting envelope, leaving the cube exposed and subject to discovery by the intelligent minds of the world where it fell. By its very nature, the cube would attract and rivet attention. This, when coupled with the action of light, was sufficient to set its special properties working.

The mind that noticed the cube would be drawn into it by the power of the disc, and would be sent on a thread of obscure energy to the place whence the disc had come—the remote world of the worm-like space-explorers across stupendous galactic abysses. Received in one of the machines to which each cube was attuned, the captured mind would remain suspended without body or senses until examined by one of the dominant race. Then it would, by an obscure process of interchange, be pumped of all its contents. The investigator’s mind would now occupy the strange machine while the captive mind occupied the interrogator’s worm-like body. Then, in another interchange, the interrogator’s mind would leap across boundless space to the captive’s vacant and unconscious body on the trans-galactic world—animating the alien

tenement as best it might, and exploring the alien world in the guise of one of its denizens.

When done with exploration, the adventurer would use the cube and its disc in accomplishing his return—and sometimes the captured mind would be restored safely to its own remote world. Not always, however, was the dominant race so kind. Sometimes, when a potentially important race capable of space travel was found, the worm-like folk would employ the cube to capture and annihilate minds by the thousands, and would extirpate the race for diplomatic reasons—using the exploring minds as agents of destruction.

In other cases sections of the worm-folk would permanently occupy a trans-galactic planet—destroying the captured minds and wiping out the remaining inhabitants preparatory to settling down in unfamiliar bodies. Never, however, could the parent civilization be quite duplicated in such a case; since the new planet would not contain all the materials necessary for the worm-race’s arts. The cubes, for example, could be made only on the home planet.

Only a few of the numberless cubes sent forth ever found a landing and response on an inhabited world—since there was no such thing as aiming them at goals beyond sight or knowledge. Only three, ran the story, had ever landed on peopled worlds in our own particular universe.

One of these had struck a planet near the galactic rim two thousand billion years ago, while another had lodged three billion years ago on a world near the centre of the galaxy. The third—and the only one ever known to have invaded the solar system—had reached our own earth 150,000,000 years ago.

It was with this latter that Dr. Winters-Hall's "translation" chiefly dealt. When the cube struck the earth, he wrote, the ruling terrestrial species was a huge, cone-shaped race surpassing all others before or since in mentality and achievements. This race was so advanced that it had actually sent minds abroad in both space and time to explore the cosmos, hence recognised something of what had happened when the cube fell from the sky and certain individuals had suffered mental change after gazing at it.

Realising that the changed individuals represented invading minds, the race's leaders had them destroyed—even at the cost of leaving the displaced minds exiled in alien space. They had had experience with even stranger transitions. When, through a mental exploration of space and time, they formed a rough idea of what the cube was, they carefully hid the thing from light and sight, and guarded it as a menace. They did not wish to destroy a thing so rich in later experimental possibilities. Now and then some rash, unscrupulous adventurer would furtively gain access to it and sample

its perilous powers despite the consequences—but all such cases were discovered, and safely and drastically dealt with.

Of this evil meddling the only bad result was that the worm-like outside race learned from the new exiles what had happened to their explorers on earth, and conceived a violent hatred of the planet and all its life-forms. They would have depopulated it if they could, and indeed sent additional cubes into space in the wild hope of striking it by accident in unguarded places—but that accident never came to pass.

The cone-shaped terrestrial beings kept the one existing cube in a special shrine as a relique and basis for experiments, till after aeons it was lost amidst the chaos of war and the destruction of the great polar city where it was guarded. When, fifty million years ago, the beings sent their minds ahead into the infinite future to avoid a nameless peril of inner earth, the whereabouts of the sinister cube from space were unknown.

This much, according to the learned occultist, the Eltdown Shards had said. What now made the account so obscurely frightful to Campbell was the minute accuracy with which the alien cube had been described. Every detail tallied—dimensions, consistency, hieroglyphed central disc, hypnotic effects. As he thought the matter over and over amidst the darkness of his strange situation, he began to wonder

whether his whole experience with the crystal cube—indeed, its very existence—were not a nightmare brought on by some freakish subconscious memory of this old bit of extravagant, charlatanic reading. If so, though, the nightmare must still be in force; since his present apparently bodiless state had nothing of normality in it.

Of the time consumed by this puzzled memory and reflection, Campbell could form no estimate. Everything about his state was so unreal that ordinary dimensions and measurements became meaningless. It seemed an eternity, but perhaps it was not really long before the sudden interruption came. What happened was as strange and inexplicable as the blackness it succeeded. There was a sensation—of the mind rather than of the body—and all at once Campbell felt his thoughts swept or sucked beyond his control in tumultuous and chaotic fashion.

Memories arose irresponsibly and irrelevantly. All that he knew—all his personal background, traditions, experiences, scholarship, dreams, ideas, and inspirations—welled up abruptly and simultaneously, with a dizzying speed and abundance which soon made him unable to keep track of any separate concept. The parade of all his mental contents became an avalanche, a cascade, a vortex. It was as horrible and vertiginous as his hypnotic flight through space when the crystal cube pulled him. Finally it sapped his

consciousness and brought on fresh oblivion.

Another measureless blank—and then a slow trickle of sensation. This time it was physical, not mental. Sapphire light, and a low rumble of distant sound. There were tactile impressions—he could realise that he was lying at full length on something, though there was a baffling strangeness about the feel of his posture. He could not reconcile the pressure of the supporting surface with his own outlines—or with the outlines of the human form at all. He tried to move his arms, but found no definite response to the attempt. Instead, there were little, ineffectual nervous twitches all over the area which seemed to mark his body.

He tried to open his eyes more widely, but found himself unable to control their mechanism. The sapphire light came in a diffused, nebulous manner, and could nowhere be voluntarily focussed into definiteness. Gradually, though, visual images began to trickle in curiously and indecisively. The limits and qualities of vision were not those which he was used to, but he could roughly correlate the sensation with what he had known as sight. As this sensation gained some degree of stability, Campbell realised that he must still be in the throes of nightmare.

He seemed to be in a room of considerable extent—of medium height, but with a large proportionate area. On every side—and he could apparently see all four sides at

once—were high, narrowish slits which seemed to serve as combined doors and windows. There were singular low tables or pedestals, but no furniture of normal nature and proportions. Through the slits streamed floods of sapphire light, and beyond them could be mistily seen the sides and roofs of fantastic buildings like clustered cubes. On the walls—in the vertical panels between the slits—were strange markings of an oddly disquieting character. It was some time before Campbell understood why they disturbed him so—then he saw that they were, in repeated instances, precisely like some of the hieroglyphs on the crystal cube's disc.

The actual nightmare element, though, was something more than this. It began with the living thing which presently entered through one of the slits, advancing deliberately toward him and bearing a metal box of bizarre proportions and glassy, mirror-like surfaces. For this thing was nothing human—nothing of earth—nothing even of man's myths and dreams. It was a gigantic, pale-grey worm or centipede, as large around as a man and twice as long, with a disc-like, apparently eyeless, cilia-fringed head bearing a purple central orifice. It glided on its rear pairs of legs, with its fore part raised vertically—the legs, or at least two pairs of them, serving as arms. Along its spinal ridge was a curious purple comb, and a fan-shaped tail of some grey membrane ended its grotesque

bulk. There was a ring of flexible red spikes around its neck, and from the twistings of these came clicking, twanging sounds in measured, deliberate rhythms.

Here, indeed, was *outré* nightmare at its height—capricious fantasy at its apex. But even this vision of delirium was not what caused George Campbell to lapse a third time into unconsciousness. It took one more thing—one final, unbearable touch—to do that. As the nameless worm advanced with its glistening box, the reclining man caught in the mirror-like surface a glimpse of what should have been his own body. Yet—horribly verifying his disordered and unfamiliar sensations—it was not his own body at all that he saw reflected in the burnished metal. It was, instead, the loathsome, pale-grey bulk of one of the great centipedes.

IV.

(By Robert E. Howard)

From that final lap of senselessness, he emerged with a full understanding of his situation. His mind was imprisoned in the body of a frightful native of an alien planet, while, somewhere on the other side of the universe, his own body was housing the monster's personality.

He fought down an unreasoning horror. Judged from a cosmic standpoint, why should his metamorphosis horrify him? Life and consciousness

were the only realities in the universe. Form was unimportant. His present body was hideous only according to terrestrial standards. Fear and revulsion were drowned in the excitement of titanic adventure.

What was his former body but a cloak, eventually to be cast off at death anyway? He had no sentimental illusions about the life from which he had been exiled. What had it ever given him save toil, poverty, continual frustration and repression? If this life before him offered no more, at least it offered no less. Intuition told him it offered more—much more.

With the honesty possible only when life is stripped to its naked fundamentals, he realized that he remembered with pleasure only the physical delights of his former life. But he had long ago exhausted all the physical possibilities contained in that earthly body. Earth held no new thrills. But in the possession of this new, alien body he felt promises of strange, exotic joys.

A lawless exultation rose in him. He was a man without a world, free of all conventions or inhibitions of Earth, or of this strange planet, free of every artificial restraint in the universe. He was a god! With grim amusement he thought of his body moving in earth's business and society, with all the while an alien monster staring out of the windows that were George Campbell's eyes on people who would flee if they knew.

Let him walk the earth slaying and destroying as he would. Earth and its races no longer had any meaning to George Campbell. There he had been one of a billion nonentities, fixed in place by a mountainous accumulation of conventions, laws and manners, doomed to live and die in his sordid niche. But in one blind bound he had soared above the commonplace. This was not death, but re-birth—the birth of a full-grown mentality, with a new-found freedom that made little of physical captivity on Yekub.

He started. Yekub! It was the name of this planet, but how had he known? Then he knew, as he knew the name of him whose body he occupied—Tothe. Memory, deep grooved in Tothe's brain, was stirring in him—shadows of the knowledge Tothe had. Carved deep in the physical tissues of the brain, they spoke dimly as implanted instincts to George Campbell; and his human consciousness seized them and translated them to show him the way not only to safety and freedom, but to the power his soul, stripped to its primitive impulses, craved. Not as a slave would he dwell on Yekub, but as a king! Just as of old barbarians had sat on the throne of lordly empires.

For the first time he turned his attention to his surroundings. He still lay on the couch-like thing in the midst of that fantastic room, and the centipede man stood before him, holding the polished metal object,

and clashing its neck-spikes. Thus it spoke to him, Campbell knew, and what it said he dimly understood, through the implanted thought processes of Tothe, just as he knew the creature was Yukth, supreme lord of science.

But Campbell gave no heed, for he had made his desperate plan, a plan so alien to the ways of Yekub that it was beyond Yukth's comprehension and caught him wholly unprepared. Yukth, like Campbell, saw the sharp-pointed metal shard on a nearby table, but to Yukth it was only a scientific implement. He did not even know it could be used as a weapon. Campbell's earthly mind supplied the knowledge and the action that followed, driving Tothe's body into movements no man of Yekub had ever made before.

Campbell snatched the pointed shard and struck, ripping savagely upward. Yukth reared and toppled, his entrails spilling on the floor. In an instant Campbell was streaking for a door. His speed was amazing, exhilarating, first fulfillment of the promise of novel physical sensations.

As he ran, guided wholly by the instinctive knowledge implanted in Tothe's physical reflexes, it was as if he were borne by a separate consciousness in his legs. Tothe's body was bearing him along a route it had traversed ten thousand times when animated by Tothe's mind.

Down a winding corridor he raced, up a twisted stair, through a

carved door, and the same instincts that had brought him there told him he had found what he sought. He was in a circular room with a domed roof from which shone a livid blue light. A strange structure rose in the middle of the rainbow-hued floor, tier on tier, each of a separate, vivid color. The ultimate tier was a purple cone, from the apex of which a blue smoky mist drifted upward to a sphere that poised in mid-air—a sphere that shone like translucent ivory.

This, the deep-grooved memories of Tothe told Campbell, was the god of Yekub, though why the people of Yekub feared and worshipped it had been forgotten a million years. A worm-priest stood between him and the altar which no hand of flesh had ever touched. That it could be touched was a blasphemy that had never occurred to a man of Yekub. The worm-priest stood in frozen horror until Campbell's shard ripped the life out of him.

On his centipede-legs Campbell clambered the tiered altar, heedless of its sudden quiverings, heedless of the change that was taking place in the floating sphere, heedless of the smoke that now billowed out in blue clouds. He was drunk with the feel of power. He feared the superstitions of Yekub no more than he feared those of earth. With that globe in his hands he would be king of Yekub. The worm men would dare deny him nothing, when he held their god as hostage. He reached a hand for

the ball—no longer ivory-hued, but red as blood....

V.

(By Frank Belknap Long)

Out of the tent into the pale August night walked the body of George Campbell. It moved with a slow, wavering gait between the bodies of enormous trees, over a forest path strewn with sweet scented pine needles. The air was crisp and cold. The sky was an inverted bowl of frosted silver flecked with stardust, and far to the north the Aurora Borealis splashed streamers of fire.

The head of the walking man lolled hideously from side to side. From the corners of his lax mouth drooled thick threads of amber froth, which fluttered in the night breeze. He walked upright at first, as a man would walk, but gradually as the tent receded, his posture altered. His torso began almost imperceptibly to slant, and his limbs to shorten.

In a far-off world of outer space the centipede creature that was George Campbell clasped to its bosom a god whose lineaments were red as blood, and ran with insect-like quiverings across a rainbow-hued hall and out through massive portals into the bright glow of alien suns.

Weaving between the trees of earth in an attitude that suggested the awkward loping of a werebeast, the body of George Campbell was fulfilling a mindless destiny. Long,

claw-tipped fingers dragged leaves from a carpet of odorous pine needles as it moved toward a wide expanse of gleaming water.

In the far-off, extra-galactic world of the worm people, George Campbell moved between cyclopean blocks of black masonry down long, fern-planted avenues holding aloft the round red god.

There was a harsh animal cry in the underbrush near the gleaming lake on earth where the mind of a worm creature dwelt in a body swayed by instinct. Human teeth sank into soft animal fur, tore at black animal flesh. A little silver fox sank its fangs in frantic retaliation into a furry human wrist, and thrashed about in terror as its blood spurted. Slowly the body of George Campbell arose, its mouth splashed with fresh blood. With upper limbs swaying oddly it moved towards the waters of the lake.

As the vermiform creature that was George Campbell crawled between the black blocks of stone thousands of worm-shapes prostrated themselves in the scintillating dust before it. A godlike power seemed to emanate from its weaving body as it moved with a slow, undulant motion toward a throne of spiritual empire transcending all the sovereignties of earth.

A trapper stumbling wearily through the dense woods of earth near the tent where the worm-creature dwelt in the body of George Campbell came to the gleaming

waters of the lake and discerned something dark floating there. He had been lost in the woods all night, and weariness enveloped him like a leaden cloak in the pale morning light.

But the shape was a challenge that he could not ignore. Moving to the edge of the water he knelt in the soft mud and reached out toward the floating bulk. Slowly he pulled it to the shore.

Far off in outer space the worm-creature holding the glowing red god ascended a throne that gleamed like the constellation Cassiopeia under an alien vault of hyper-suns. The great deity that he held aloft energized his worm tenement, burning away in the white fire of a supermundane spirituality all animal dross.

On earth the trapper gazed with unutterable horror into the blackened and hairy face of the drowned man. It was a bestial face, repulsively anthropoid in contour, and from its twisted, distorted mouth black ichor poured.

“He who sought your body in the abysses of Time will occupy an unresponsive tenement,” said the red god. “No spawn of Yekub can control the body of a human.

“On all earth, living creatures rend one another, and feast with unutterable cruelty on their kith and kin. No worm-mind can control a bestial man-body when it yearns to raven. Only man-minds instinctively conditioned through the course of

ten thousand generations can keep the human instincts in thrall. Your body will destroy itself on earth, seeking the blood of its animal kin, seeking the cool water where it can wallow at its ease. Seeking eventually destruction, for the death-instinct is more powerful in it than the instincts of life and it will destroy itself in seeking to return to the slime from which it sprang.”

Thus spoke the round red god of Yekub in a far-off segment of the space-time continuum to George Campbell as the latter, with all human desire purged away, sat on a throne and ruled an empire of worms more wisely, kindly, and benevolently than any man of earth had ever ruled an empire of men.

AFTERWORD.

[RETURN TO TABLE OF CONTENTS]

H.P. Lovecraft spent the last few months of 1936 in an increasingly miserable state. He'd always been gaunt, except for that one year when Sonia tried to fatten him up a bit; but now his cancer was interfering with his body's ability to draw nourishment from his meager food (meals typically consisted of a half-can of beans, a hunk of bread, and some cheese) and leaving him chronically constipated to boot. His failing energy left him unable to keep up his former pace of reading and work. Clients fumed as their deadlines came and went. The death by suicide of his friend and colleague Robert E. Howard—a chronic depressive who once said he only chose to remain alive to

spare his mother the pain his suicide would cause her—hit Lovecraft very hard at a time when his own personal resources were ebbing.

Late in 1936, for the first time, H.P. Lovecraft got to see a published book with his name on the spine—a small run of *The Shadow Over Innsmouth* published by William L. Crawford. The whole undertaking was plagued by major dearths of skill and money, however, and of the press run of 400 copies, there was only enough money to bind 200, and sales of these were slow. Today, of course, they're highly prized; warts and all, they're the only book of H.P.'s work published during his lifetime.

And his lifetime was almost over. By late February of 1937, it was clear

something was very wrong. Lovecraft spent whole days in bed propped up with pillows, too weak to get up. A doctor, called in, found him sitting in bathwater, which gave him some relief from the chronic pain. On March 2, a specialist confirmed what the doctor had come to suspect: cancer. Advanced, metastasized and inoperable.

Lovecraft was checked into the Jane Brown Memorial Hospital, where, loaded with pain medication and being fed intravenously, he said goodbye to his friends and waited for death. Finally, in the early morning hours of March 15, it came.

It seems likely that Lovecraft, an antiquarian with a great love for ancient Rome, derived at least a little satisfaction from knowing his death would come on the Ides of March. But, of course, that is one thing he didn't write about.
